One enters by a massive staircase in three flights to reach the elliptical rotunda, which eventually will be the distributing centre of the pile. At the front of the staircase well is the reference library and collection of photographs, approaching which one may look into the balconied courts which contain the casts. Later these facsimiles will have a hall of their own, and the courts will be used for originals. Turning to the right at the head of the steps, one passes two small galleries and reaches the great hall devoted to the Egyptian collections. The walls, as generally in the museum, are of plaster carefully glazed, and very lively in effect. The remarkable Mastaba tombs with painted reliefs, which have been long in storage, are now set up entire and divide the early from the middle period. They supply a broad record of Egyptian life. Hunting, warfare, commerce, the handicrafts—all are represented. The wooden images and limestone reliefs exemplifying the earlier dynasties are famous. These are set up with abundant space, and fragments of two colossal statues in alabaster have been added. Probably nothing in America so completely expresses the gravity of this early style.

Passing to the left from the Hall of Late Egyptian Art one may make the round of five halls in the east wing, beginning with archaic Greek and finishing with Greco-Roman art. Again the walls are treated in grayish roughcast subtly toned. In this department the advantages of an elastic and humane system of exhibition appear conspicuously. The aim has been to give an anthology of classic art century by century, and nothing has been omitted that could add to the veracity and interest of the picture, nothing omitted that is merely repetitious and tedious. Thus the archaic room, which contains the famous Assos reliefs and a fragmentary funeral slab, really gains its effect from a splendid vase of the type of Douris, and even more from a central case containing a small group of those austere little bronzes which represented the so-called

Dædalan style at its best. Most museums would have kept the vase and the bronzes in their respective departments, and the result would have been to impoverish the archaic display.

The next hall, that of the fifth century, contains a lovely and magnificent marble relief of Eros Weighing Souls, which has been opportunely bought to give lustre to the reopening of the museum. It is a work of such transcendent beauty and importance that it seems better to return to it soon, rather than to interrupt the itinerary. In this hall again a splendid red-figured vase with scenes from the Trojan war is a valuable adjunct to the major exhibits. Passing two halls of marbles, we reach the fourth century, where terra-cotta figurines come to the front as the marbles become scarcer. In the next hall, that of Hellenistic art, mirrors, embossed tops of toilet boxes, are welcome exhibits.

Thus gallery by gallery the components change, and the balance of interest shifts now to this now to that class of objects, while the epitome of each century remains fairly complete and satisfactory. Evidently the only way to display the art of a period is to take it as a humane product, ignoring the arbitrary segregations that scholars have justifiably made for their convenience. The critics of the Renaissance had the true sense of this unity of the arts when they insisted that all were included under the general category of design (*disegno*). This idea has inspired those who arranged the classical department of this museum. So successfully have they displayed the material at their command that it seems to us that nowhere, outside Greece itself, except in the British Museum, can Greek art be studied more advantageously, or, saving the Terme Museum at Rome, seen more enjoyably.

And now for the finest of new acquisitions: In the marble throne with reliefs representing Eros (Thanatos? Hermes?) weighing two souls before two seated goddesses, the museum has acquired one of the most precious remnants of Greek sculpture at its best. That this is not too much to say will be plain when it is added that this relief is evidently the companion-piece of the famous Ludovisi throne at Rome, and that it is in every way in better preservation. That one is the pendant of the other is shown by the marble, the nature of the cutting, the dimensions, and even more by the correspondence of the subjects. And first, neither is properly called a throne. The inner surfaces where the seat should be, are roughly hewn, show no traces of facing, and evidently were not meant to be seen. The finish of the edges again suggests that the two pieces were either imbedded in masonry or served as the crown of a monument at a level above the eye. One may surmise that they were the gable ends of a small shrine, and separated by a small space of plain masonry. The Ludovisi relief, it will be recalled, shows in the gabled back Venus rising from the sea (some archæologists say rather Persephone rising from or sinking to the Lower World), attended by two nymphs, now headless, who draw a mantle about the lovely torso of the deity. The corresponding panel at Boston displays a nude winged figure holding a balance in the pans of which are two athletic figures in miniature. As the beam tips, the seated figure at the left raises her hand in sorrow at the fatal lot, while the other figure sits motionless in contentment. The arm of the balance has disappeared. It was mortised into tenons, the size of which shows that the scales were entirely of marble. At the corners are fine volutes surrounded by a honeysuckle finial. This beautiful feature is missing from the Roman piece.

The interpretation of these two main reliefs will doubtless exercise archæologists for years to come. Only the alternative seems plain that if the Roman example is indeed an Aphrodite, then the weigher of souls should be Eros, while on the theory that the goddess is Persephone, the winged judge should be Hermes, or possibly Thanatos —Death himself. The little figures in the balance, executed in freest low relief, are of utmost delicacy and beauty. To find their like one must go to the high Renaissance or to Rodin. The rhomboidal sides of the Boston piece are again of extraordinary interest. At the right a graceful youth wholly nude sits on a doubled cushion and plays the lyre. He faced the entrancing nude figure of a piping maiden in the Ludovisi throne. At the left a short-haired crone sits with hands on knees holding what seems to be the remnant of a staff. She faced the draped figure of a priestess putting incense upon a slender brazier. The head of the old woman has an extraordinary intensity of expression. One would imagine it a portrait. And were it detached from the body, only the marble would warn the admirer that this was not a drastic portrait head by some transitional sculptor of the late Middle Ages, say, a Christoforo Romano. It reveals the genius of Greece in a new phase. The draperies and the feet have that especial delicacy and precision which we find only at the moment when an archaic art is nearing its classic consummation. The museum is to be congratulated, not merely on securing one of the loveliest examples of Greek sculpture, but also on owning a masterpiece, the quality of which, representing a transient and seldom recurring perfection, is even rarer than that of the so-called golden ages.

From the classical wing, the visitor would naturally go back either by the central corridor or the narrower passageway that skirts the Egyptian hall, to the picture galleries. But since the pictures are in provisional quarters, and are in the main arranged as they were in the old museum, the hurried pilgrim naturally reserves them for a more convenient occasion. Instead, one may pass through three side-lighted halls, to the right of the main corridor on entering, which are devoted to the art of the eighteenth and the seventeenth centuries and to that of the Renaissance. Thus one reaches a large top-lighted gallery, hung with tapestries, and, beyond to the right, a smaller hall, containing objects of Near Eastern make, chiefly Persian. Pottery and textiles constitute the bulk of this exhibition, but there is much fine metal work, and a lustred bowl with a figure design, exquisitely executed, rightly holds the centre of the room. It represents Persian draughtsmanship at its perfection and should be inspected with the reverent attention one gives to the illuminated page of a splendid mediæval manuscript.

One approaches the west wing and the art of the Far East through a corridor set with cases of Chinese pottery and porcelain, with larger pieces on pedestals between. Here is a grateful change from the too common precedent of continuous cases. And here appears a finesse consistently carried out in this section: all the woodwork of the cases and the trim of the hall is in unvarnished wood, with Japanese profiles. The aim has been not to reproduce any special form, but simply to avoid the disturbing presence of forms with Western associations. In the first hall, dedicated to Japanese sculpture, this simple principle of congruity has been enlarged upon, it may seem unhappily. Not that there is anything inherently amiss with the columned sanctuary with interlacing wood vaulting that R. A. Cram has designed for these Buddhas and lesser adepts of "The Way." In fact, they look very stately in their intercolumnar spaces. It is just such a setting as an amateur of taste might contrive for his treasures, and this may seem both its eulogy and condemnation. It smacks of amateurism. It puts the setting in competition with the jewels, and, worse yet, it puts in an unfairly anticlimactical light the simple walls that follow. As for the bronze and wooden images, they are already famous. In the old museum most of them occupied a similar, but much less ornate, hall. All styles from Shinto sculpture, antedating the Buddhist era, to the splendid decline of the sixteenth century, are represented. What is remarkable is the severity and intelligence of the workmanship. Only the very finest Western sculpture approaches it. Look at the three-headed god that guards the exit. By the sparsest indications, the bony form and the drag of the muscles is suggested. Every touch of

the chisel and drawing knife has counted tremendously. Here is a minimum of work, with a maximum of vision and directing intelligence.

Within the nine halls of the Far Eastern wing is a balcony simply carpentered in Japanese style, with fine temple carvings let into the rail, which looks down upon a sanded garden where in four square pools grow lotos and papyrus. A bronze Buddha, with some dull gilt about him, takes in the scene in sleepy approval. One or two gray stone lanterns rise from the silvery sand. This is not a museum feature. It is rather an oasis provided for the wearied visitor, where he may halt and, freeing himself of the bustling associations of every day, let a little of the mysterious calm of the sacred East fill his harassed consciousness. The end of our visit is peace.

But it is not quite the end. Questions intrude. Where are many of the objects we used to see in the old buildings? How has the princely space we note in most halls—by no means in all; some are still overcrowded—been gained? The answer is found downstairs. There are kept the collections that are perplexingly big and various for the average man. Here is the extraordinary Morse collection of Japanese pottery, representing the makes of half the villages of Nippon. Here is the print collection with a roomy exhibition gallery. Here the bulk of the textiles, one of the most notable collections, is kept at the disposal of every student. Similarly, the Greek vases and terra-cottas are here in exhibition storage. The student, or, indeed, the merely curious visitor, may see and study all these things in quiet with the aid of the curators and working libraries. And the principle that has created this building now appears plainly. The more beautiful things, those that have a civilizing value for every man, have been shown with generous space, so that they may tell; while the archæological objects—those that concern chiefly the professional student, have been brought into a more compact and isolated arrangement which is far more convenient for the investigator than the condition prevailing in true exhibition halls. We have, as has been said, two museums in one, but this duality does not imply disagreement. On the contrary, there will be a constant give and take between the galleries and the storerooms. Variety will be secured by changing the exhibitions as anniversaries or other current motive may dictate. As finer objects are purchased, others, to make space, will pass into storage.

In what has just been written possibly the future development of this museum has obscured the present reality. This building is part of a larger whole. The dual tendency is embodied at present only partially, and, one may presume, experimentally. That it will commend itself, no one can doubt. To-day this museum is one of the easiest to see. One can hardly recall another instance where so large a sum of pleasure may be had at so little tribute of fatigue. Of this accomplishment, the trustees, the staff, and the city of Boston may well be proud. It would not be surprising if the principles here partially but most promisingly exemplified, should serve as a goal towards which all art museums —and others for that matter—professing public service, must ultimately strive.

M.

The 105th annual exhibition of the Pennsylvania Academy of the Fine Arts is announced for January 23-March 20, inclusive.

Arthur Hayden is preparing a biography of Josiah Wedgwood, the famous English potter. The Wedgewood family have placed at the biographer's disposal their private store of material.

We have spoken a word of enthusiasm concerning the Metropolitan Museum's exhibition of Dutch masters, and its wonderful Rembrandts, and, in our last issue, of the youthful Pourtalès portrait shown at Scott & Fowles's. Through a most opportune exhibition of his etchings at the Keppel galleries one is enabled to learn still more of his art, and of his character scarcely less. Here one may study Rembrandt the master of religious subjects, as it has been impossible to do at the Hudson-Fulton show. And this Keppel collection is rich, no less, in his etched landscapes.

Whistler is always interesting, whether good, bad, or indifferent, and in the exhibition of his lithographs now on view at the Wünderlich galleries he is almost invariably good. It was not until 1878 that he was induced to try lithography, and when he did use the greasy pencil it was characteristic of the man to strike out an original line. In two or three litho-tints, made with washes of ink on the stone and an occasional use of chalk, he does not appear to have been so happy, such pictures as the Nocturne, Limehouse, and Early Morning looking like wash drawings of no particular merit. But in some of the figures of women Whistler was at his best. A study of one in classical dress, with her left arm resting on a wall, the right touching a line that suggests an amphora, is exquisite in its grace; the Dancing Girl, the Draped Figure, Seated, the Model Draping, the Girl Reading, The Winged Hat, and La Jolie New Yorkaise are all delightful, delicate studies of charming womanhood.

Frédéric-Charles Vernon has been elected to the Académie des Beaux-Arts in place of the late M. Chaplain, the medallist. The new academician is a pupil of his predecessor, and has received several medals for his work, as also, in 1887, the Prix de Rome.

François Gruyer, a member of the Académie des Beaux-Arts and curator of the Musée Condé, has died at Chantilly, as he was entering upon his eighty-fifth year. A pupil of the Ecole des Arts et Manufactures, his first professional post was lecturer in chemistry at the Institut Agronomique of Versailles. Later, however, he abandoned science for the fine arts, and from 1857 to 1868 he published no fewer than seven volumes on Raphael's frescoes of the Vatican, and on his Virgins. In 1874 he published his "Raphaël peintre de portraits." Other works in the field of art criticism and of the history of art followed, and many periodical essays. The writer was named in 1872 inspector-general; later, member of the *conseil supérieur* for the fine arts; finally, *conservateur de la peinture* at the Louvre. His election to the Académie des Beaux-Arts took place in 1875.

Finance.

BANK STATEMENTS WHICH MISLEAD.

In 1905, a Stock Exchange speculation much like that of the past two months was raging, and New York bank reserves were repeatedly drawn down close to the minimum legal ratio to deposits. A violent advance in the money rate to 7 and 8 per cent. showed the relation between supply and demand of credit, as a result of the Wall Street operations. Nevertheless, the loans of the New York Associated Banks, between September 2 and October 21, 1905, as shown by the weekly statements, actually decreased $110,000,000. Even Wall Street was incredulous over these returns. The president of one of the largest banks in New York city, addressing in November of that year his associates at the Clearing House, made this plain assertion:

> We all know that the present bank statement is a farce, so far as it conveys any idea of banking conditions. It is partial, it is half the truth, and unworthy of quotation as an indication of the trend of business in our line.

With the opening of the autumn season in 1909, an even bolder Stock Exchange speculation was under way. Its known demands on credit were prodigious, and, as in 1905, those demands became largest in September and October. Yet the loans of the New York Associated Banks, reported in their weekly statements, were reduced from $1,350,000,000 at the opening of September to $1,231,000,000 in the middle of October —an apparent loan contraction of $119,000,000 in the very face of rapidly increasing demands from the Stock Exchange, and of expanding requirements for credit in the active autumn trade.

This time, the loans were not "shifted" to the trust companies, as it was commonly supposed they were in 1905. The new law of 1908, requiring a 15 per cent. cash reserve by such institutions, and the rule established by the new banking superintendent that the trust companies should make regular weekly statements, prevented that. In the six weeks in which the banks were reducing loans $119,000,000, the trust companies also had reduced their loan account

$20,000,000. Recourse to European lenders explained a good part of the mystery; it was when this hidden "shifting process" was most actively at work and speculation rioting most violently on the Stock Exchange, that the Bank of England came into the London market, put up its interest rate aggressively, and took measures to blockade the London money market against the Wall Street speculators.

This recourse, then, apparently fell down. Last week, moreover, the usual heavy drafts on their New York deposits by interior banks set in. New York exchange at Chicago fell to the point where currency could be drawn; $6,000,000 went out in the week from New York to the West. Loans were known to have increased in the New York market as a whole. The surplus reserve of the Associated Banks, which had fallen to the very low margin of $4,400,000 the week before, was apparently destined to be replaced by a deficit below the 25 per cent. ratio to deposits required by law. Last Saturday's bank statement was accordingly awaited with the keenest interest. When it was published, it reported a loan reduction of no less than $39,000,000, and an actual increase of $6,300,000 in the surplus reserve.

Now, a strong bank statement is traditionally reassuring; but an ostensible report of strength and improvement, at a time when every one knows that the credit situation has not improved, is scarcely so gratifying a result. It means in this case, as it did in November and October, that rather than reduce or liquidate an unduly extended speculative position on the Stock Exchange, new sources of borrowing have been found to keep the fire burning. Probably these new sources are out-of-town institutions which should be using their funds at home, but which were induced to put them out by last week's 6 per cent. bid on the Stock Exchange. Whether this is a salutary process, is the real question at issue.

The general situation, in a financial way, is fortunately strong. The New York banks have managed, by one means or another, to get through the season, thus far, without a deficit in reserves. They have, however, not been able to avoid one confession which has always, in the past, betokened a strain on local credit facilities. For loans to exceed deposits, at the Associated Banks, is a very rare occurrence. From September, 1893, to October, 1902, the phenomenon was never witnessed. It happened for a week or two in the autumn money strain of 1900 and 1903; occurred a few times in 1905; was witnessed, after the middle of February, in every week of the year of gravely unsettled money markets, 1906, and came once more in the panic of 1907. After the early weeks of January, 1908, it was not seen again until the 30th of last month, when the excess of loans was $2,500,000. The excess rose to $7,190,000 the ensuing week, and to $14,200,000 last Saturday.

BOOKS OF THE WEEK.

Aicard, J. The Diverting Adventures of Maurin. Translated from the French by A. Allison. Lane. $1.50.

Allinson, A. The Days of the Directoire. Lane. $5 net.

Anecdota Oxoniensia. Texts, Documents, and Extracts chiefly from Manuscripts in the Bodleian and other Oxford Libraries. Aryan Series—Part ix; Classical Series—Part xi. 2 vols. Frowde.

Mr. DE MORGAN'S

It Never Can Happen Again

is now ready

GIFT BOOKS OF PERMANENT VALUE

A History of Architecture
By RUSSELL STURGIS
Volume II of this important work is now ready. It covers the later Romanesque, Asiatic architecture, and Moslem architecture. These fields are illustrated by a wealth of half-tones, line cuts, and handsome photogravures—400 in all. Imperial 8vo. 480 pages. Cloth. $5.00 net per volume. Carriage extra.

Medieval Architecture
By ARTHUR KINGSLEY PORTER
Presenting the early history of architecture, with special relation to the Gothic. Two vols. Quarto. 289 illustrations. Per set, $15.00 net.

Modern Artists
By CHRISTIAN BRINTON
A brilliant study of recent art, biographic and critical. Imperial 8vo. 270 pages. 60 illustrations. Net, $6.00.

Retrospections of an Active Life
By JOHN BIGELOW
A record of long and arduous public service in historic setting on two continents. A piece of the history of the past fifty years. 8vo. Three vols. 48 illustrations. Net, $12.00. Carriage extra.

THE BAKER & TAYLOR CO.
33 East 17th Street, New York.

BOOKS ON CHINA Successful dealing with China in trade or diplomacy requires some knowledge of its language, life and customs, religion, philosophy and literature.

SEQUEL TO
"ANNE OF GREEN GABLES."

The Pilgrim Fathers
Their Church and Colony
By WINNIFRED COCKSHOTT, St. Hilda's Hall, Oxford.
With 12 illustrations. $2.50 net.
It is doubtful whether the work of the Pilgrim Fathers has had more influence in the religious or in the political world. How their work grew out of the social and religious condition of Elizabethan England, how deeply it was affected by their twelve years' sojourn in Holland, and how it bore fruit in their colony at Plymouth, can be rather suggested than discussed in a book of this length. An attempt is made to trace the gradual development of the Pilgrim Church, to sketch the history of Plymouth colony during its independent life, and to show how under Dutch influence the democratic principle gained ground both in Church and State.

G. P. PUTNAM'S SONS, NEW YORK & LONDON

COLUMBIA STUDIES IN HISTORY, ECONOMICS AND LAW
New Volume (Vol. XXV, No. 3)
DIVORCE: A Study in Social Causation
By JAMES P. LICHTENBURGER, Ph.D.
Assistant Professor of Sociology, University of Pennsylvania.
8vo. 230 pages, price $1.50, paper covers; or bound in cloth, $2.00.

LONGMANS, GREEN, & CO., New York

"THE RELIGION OF THE FUTURE"
By CHARLES W. ELIOT, and other Unitarian literature sent free on request. Address Box 74, Barnstable, Mass.

The Nation.

NEW YORK THURSDAY, NOVEMBER 25, 1909.

The Week.

The Isthmian Commission's annual report on the Panama Canal never lacks one delightful element of interest: By how much has the latest estimate of cost moved still further from the original estimate of $144,000,000? Progress is, of course, being made towards the completion of the vast enterprise. The millions of cubic yards of excavation may vary from year to year. The administrative and engineering systems may come in for frequent reorganization. But the one permanent, undeviating, unfluctuating factor in the construction of the canal is the rapid march of the final cost straight upwards. In 1902 the canal was to cost $144,000,000, inclusive of police and sanitation. In 1906 it was to cost $139,000,000, exclusive of police and sanitation, which will swell the total some seventy-five millions before the end. Now Col. Goetbals's latest report, for the fiscal year ending last June, forecasts a total expenditure of $375,000,000. The increase is explained as due, in the first place, to an addition of 50 per cent. to the amount of work necessary to be done, and of 20 per cent. to the cost of labor due to the enhanced cost of livlng, the difficulty of attracting labor from the United States, and the introduction of the eight-hour day.

If there is any prevailing idea that civil service reform means the keeping in office of the organization I shall find there, I will give the community a new idea of civil service reform.

This statement by Mr. George McAneny, president-elect of the Borough of Manhattan, was, of course, not designed to have any bearing on matters outside his own province, but it is nevertheless peculiarly timely in connection with the crookedness in the customs service. Whenever it happens that dishonest persons occupy places in the classified service, there arises, in certain quarters, a wail about the difficulty of the heads of the offices in getting rid of undesirable employees who are protected under the civil service rules. Many persons are doubtless under the impression that those rules interfere with the power of the appointing authority to make removals, but that is not the case. The only requirement is that the cause of the removal shall be stated, and the person removed shall have a chance to protest, if he sees fit. There is no trial, public or private; the necessity of stating a cause (in so far as that necessity exists) is intended merely as a safeguard against wanton removals. No responsible officer need have the slightest fear of a crooked employee protesting if removed on some such general ground as that his work is not compatible with the good of the service; he will be glad enough to let it go at that. Collector Loeb is evidently not bothered in the least with the imaginary difficulty of the civil-service rules. The real protection furnished by the rules is in doing away with arbitrary removals for the purpose of giving places to political or personal favorites.

That Boston has not yet abdicated her ancient position as a source of civic leadership in the country is attested by the inauguration of a hopeful experiment. Nominations for the approaching Mayoralty election will, under the new city charter, be made by petition only, and party designations will be wholly absent from the ballot. It is plain, furthermore, that the people of Boston realize that a mere change of machinery, however excellent, will accomplish nothing without the active and intelligent interest of the best citizens. A committee of one hundred and fifty undertook to name a candidate upon whom the people who desire good government might concentrate their support, and the sub-committee to whom the finding of the right man was delegated included such men as Richard Olney, Attorney-General and Secretary of State under Cleveland, and Charles S. Hamlin, ex-Assistant Secretary of the Treasury. The nomination of the Committee of One Hundred and Fifty has now been made. Their candidate for Mayor is James J. Storrow, president of the Boston Chamber of Commerce, a member of the firm of Lee, Higginson & Co., long president of the School Board, and the choice is indubitably a strong one. The Mayoralty of a big city is a great business office, and we must work, in all our cities, toward bringing the people to demand the same kind of qualifications for that post as in the conduct of a great business.

In announcing his company's acquisition of control of the Western Union Telegraph, the president of the American Telegraph and Telephone—the old Bell Telephone Company—points out that "the making of one business the auxiliary of the other business would result in large economies both to the public and to the companies." He instances the joint use of certain portions of the plant, meaning not the wires, but the offices and general service. In the matter of charges for telephone and telegraph service, Mr. Vail is guarded; he merely says that telephone service has been growing cheaper, and that telegraph service ought to reflect the benefit of coöperation. Nevertheless, this is, from the public's view, a crucial point. It is hardly necessary to say that an advance in telephone tolls, following—even at a distance of months or years—an announcement of this sort, will be ill received. Even more serious and disquieting is the bearing of the virtual merger on the question of competitive rates for telegraphing. For many years, the Western Union has had only two sources of competition in the field—the Postal Telegraph Company, which was a direct competitor, and the telephone company, which was an indirect competitor to the extent that high telegraph tolls or poor telegraph service would tend to drive patrons from the telegraph to both short-distance and long-distance telephone. The second of these, the indirect or potential competition, is extinguished by the present amalgamation. The other, that of the Postal Telegraph, has been an active force in compelling reasonable rates and efficient service. It cannot be described as altogether reassuring, despite the announcement of the Postal's independence, that the Postal holds a $10,000,000 interest in the telephone company. What attitude the State or Federal Government will take in the matter is as yet by no means certain; that, also, will probably depend upon what construction is placed on the ulterior purposes of the merger.

Labor should acknowledge that justice and the law's delays are not always on the side of the capitalist plunderers. It is some time since Mr. Gompers was enjoined from preaching the boycott against the Bucks Stove and Range Company. It is some time since Mr. Gompers was sentenced to prison for contempt of court. Yet by the latest accounts Mr. Gompers is still at liberty and is still making public his views concerning Mr. Van Cleave. Our system of appeals and stays and appeals from appeals and writs of habeas corpus upon appeals from appeals works as efficiently in keeping a captain of labor out of jail as it does many a captain in the service of Mammon. Only the other day Mr. Gompers's lawyers obtained a stay of execution until November 29 in order that they might apply to the United States Supreme Court for a writ of certiorari to bring the case before that tribunal. The judge who granted the stay told the lawyers that, if it shall prove impossible to secure such a writ on November 29, they may obtain even more time. Appeal and stay, habeas corpus and certiorari—in their inextricable intertwining they are a mystery to the layman whose impious voice shall not be raised against the entire beautiful system, lest he, too, be found guilty of contempt of court and be sent to jail—in the year 1945.

It really begins to look as if the twenty-six victims of football who have died since the opening of the season, mostly because of mass-play, had not lost their lives altogether in vain. From every side come protests and demands that the game shall be either thoroughly reformed or abolished. The schools have taken the lead. Following the action of the St. Louis and Washington high schools, it is probable that the game will be prohibited in the New York city schools unless radically revised. The Berkeley School, one of the large private institutions of this city, has disbanded its team in response to protests from parents. The annual game between the Montclair Academy and the Montclair High School was cancelled when one team was already on the field, for the reason that a number of mothers preferred their sons alive to their sons dead. And the colleges are also stirring. Those of the Middle West have instructed their delegate to the Rules Committee to deliver an ultimatum, if they are to continue to play the game. This indeed assures revision. But revision alone will not suffice; if there is to be football, it must be reconstituted.

All this is in striking contrast to the apathy which has marked previous efforts to reform the game. When the *Nation* first attacked mass-play some fifteen years ago, it was difficult to rouse interest. Yet the revolving mass-play of those days was abolished, and some three years ago the play was opened up by requiring a ten-yards gain, instead of five. For a time it appeared as if this change, reluctantly wrung from the Rules Committee, had, together with the onside kick and forward pass, opened up the game sufficiently. But this season has witnessed a further reliance upon mass-play. The Harvard team on Saturday was well trained only in the "old-fashioned" game. It gained its ground by the deadly plunge into the line, the effect of which was shown in the very first rush; it "knocked out" Lilley, the veteran Yale tackle. The expectation that the Yale team would open up the game for the game's sake proved groundless. It was as if, in this last important contest of the season, both teams were bent upon proving how impossible the present game is.

The award of the Copley medal of the Royal Society to Dr. George W. Hill of West Nyack, N. Y., is an honor to an American that is not likely to get the public attention which it merits. The Copley medal is the highest distinction conferred by the Royal Society, and it is matter for national gratification that this honor at the hands of the oldest and one of the greatest of scientific societies should have been bestowed upon an American. And, while it may be invidious to make distinctions among different departments of research, yet a certain primacy belongs to that domain which is at once the most ancient field of scientific inquiry and demands for its exploration all the resources of the most abstract and most highly developed of sciences. Dr. Hill's work in celestial mechanics places him not only foremost among the mathematical astronomers of to-day, but marks him out as one of the extremely few men who, since the time of Laplace, have carried forward the great results embodied in the "Mécanique céleste." His honor is a refreshing change from the wearisome process of round-robin degrees for college presidents.

In reading such a report as that of the new anæsthetic which enables a man to undergo an extensive surgical operation without pain and without loss of consciousness, one is impressed again with that steady, definite, and imposing progress of physical science which has been held by some eminent scientific men to constitute the most significant difference between scientific knowledge and the sort of thing that has been recently claiming widespread attention under the name of psychical research. The argument is not conclusive, but it is worthy of attention. Here we have been, for fifty years and more, confronted with alleged phenomena of table-tipping, slate-writing, and the rest. Thousands of laymen, and not a few men of scientific ability and ingenuity, have been interested in them. If they are genuine, they open up to the imagination boundless possibilities of development; and yet they are still at the stage of simply demanding to be recognized as true. Of course, it won't do to lay down laws to the powers of nature, still less to powers outside of what we commonly call nature; yet one cannot but feel that if these things had really been true, there should by this time have been some advance in the results brought out, at least faintly comparable with the advances that have followed upon every new opening in the field of electricity, or chemistry, or bacteriology.

The Christian Science machine at Boston functions with less ease than efficiency. It is a triumph for centralized authority that Mrs. Stetson should have found the backing of her own congregation, New York's oldest and wealthiest Christian Science congregation, avail her nothing. She is now outside the pale of the church and among the fallen angels. But it should be noted that, to bring this about, the guardians of the creed at Boston had to play their highest trump card. Mrs. Eddy herself had to break a silence and seclusion so profound as to have raised doubts whether she was alive at all, and chasten the sinner into submission by direct reproof. The culprit submits; it could not

be otherwise with Christian Scientists, while yet the founder of the faith is among them. It must be different in the future, when out-of-town congregations are pretty sure to rebel against the rule of the Boston Camarilla. There will probably be an Eddy testament in which the succession will be settled. But very few prophets have been successful in warding off schism after they are gone.

Last Monday's debate in the House of Lords, with the significant declaration by the Lord Chancellor, made it clear that the coming general election will turn on much more than the budget. The Liberals will go to the country for a warrant not merely to pass the present budget without interference by the Lords, but to pass all budgets and all important legislation without it. The result of the Constitutional struggle, if the Conservatives lose in the appeal to the electors, will be to strike at the veto power of the Lords in general, and to make it nearly as inoperative as that of the King has become. This question Liberal statesmen have long desired to find a way of bringing directly before the people. Gladstone would have eagerly made it the issue in 1893, after the rejection of the second Home Rule Bill, if he had not been so stricken in years. Even Lord Rosebery talked then of either mending or ending the House of Lords. Sir Henry Campbell-Bannerman's proposals, two years ago, to deprive the Lords of the right to veto a bill passed a second time by the House of Commons, were an indication of this persistent search for ground upon which to make a fight against the Lords. The Liberals have been steadily looking for a good occasion. Some thought they would find it in the rejection of the Education Bill, but they did not then venture it. So with the killing of the Licensing Bill by the Lords, and the bill for the abolition of plural voting—many Liberals said, "Now is our chance!" but the leaders held back. To-day, however, the Lords are themselves furnishing the opportunity which the Liberals have so long sought in vain.

The bringing about of so acute a crisis, involving such immense consequences, is a great surprise. It does not look like the English way of doing things. Especially does it appear as if the Lords had walked into a net openly spread in the sight of the bird. Why should the Conservatives do what their enemies were devoutly praying that they would do? We admit sincerity on the part of many of the members of the House of Lords. Lloyd-George has frightened them. They honestly think that they are facing the first onset of a determined Socialist movement. Knowing the great risks which they take in resisting, they yet resolve to resist. But this is only a part of the story. Selfish interests are at work. Sinister means are employed. There is, first, the influence of the manufacturers who have been induced by Joseph Chamberlain and his agents to supply funds to finance the campaign for protective taxes. We have heard it credibly stated that they have already contributed as much as $5,000,000. And they are getting impatient to have something to show for their money. They are betraying something of the haughtiness of our own protected manufacturers in demanding that legislation which they had bought and paid for should at once be enacted. Moreover, there are the brewers and keepers of public houses. They have been faithful allies of the Conservatives. There was too much truth in the assertion that the latter won the election of 1900 on the issue of "Beer and the Bible." The "trade" is strongly against the budget because it contains licensing clauses and liquor taxes most obnoxious to it. In one way or another, Balfour's hand has been forced, and he has been compelled to go reluctantly with his party into a fight which he would have avoided upon an issue which he would have evaded.

The French *Officiel* has recently published statistics which must be depressing reading for all Gauls who believe that a nation's greatness depends on its size. The number of births during the first half of the present year is shown to be smaller by twelve thousand seven hundred than those for the corresponding period of 1908. At the same time, deaths have increased by twenty-five thousand. From these figures, certain American newspapers have already drawn their usual conclusions as to the terrible decadence of France. That the situation is, from the standpoint of the French militarist, highly perturbing, there is no use in denying. Yet what if the French plight of to-day is also our own dilemma of to-morrow? At Ithaca, Professor Wilcox of Cornell University states that "the decline of the birth-rate in the United States has probably been as rapid as in any country of Europe, and if it should continue unchecked for a century and a half, at the end of that time no births would take place." No one quite expects this last consummation—so soon, at least—but it is quite evident that the decrease is one which should set to thinking those of us who cherish illusions, if they are illusions, as to the virility of our "American" stock. Figures from Harvard College, cited by the Cornell statistician, indicate that for each hundred graduates there are in the next generation only seventy-three sons. This is a thin crop for Theodore Roosevelt's college, and we may now look for a revival of the ex-President's "race-suicide" preachments from almost any quarter.

The extraordinary series of Socialist victories in Germany continues. Parliamentary and municipal elections show the same result. The tide runs much more strongly towards the Social-Democrats than any mere reference to the ordinary swing of the pendulum can explain. In Great Britain, it is pretty nearly the regular thing for a party to win a general election and then, from the beginning, almost, to lose bye-elections. The greater its majority in the general election, the more rapid will its losses be when the original enthusiasm has died out. But in the case of the German Social-Democrats, no matter-of-course reaction, no local conditions, can explain what is taking on the proportions of an unheaval against the Government parties. Profound national discontent is voicing itself in Socialist votes—discontent with an Imperialism that is driven to tax the bread and light and air of the working masses, discontent with the traditional Government policy of ruling with kaleidoscopic *blocs* cemented, while they last, by very frank bargaining and log-rolling methods. Moreover, there is deep dissatisfaction with the so-called "Liberal" factions which, in their susceptibility to Court favor, and their exaggerated fear of Socialism, seem never to lose an opportunity of betraying the cause of Constitutionalism and anti-feudalism, for which they profess to stand.

THE SENATOR AND THE SUBSIDY.

That the ship-subsidy advocates have again taken heart appears clearly from Senator Root's speech at the New York Chamber of Commerce dinner. They were defeated at the close of the last session; but, like the boy in the advertisement, they can never be happy until they get a merchant fleet with the Government as a side partner—at the expense of every other American citizen, man or woman. Mr. Root's speech was deliberately timed to affect the Chamber, which is to pass its judgment upon this project within two weeks. It unfortunately did not receive the full measure of publicity it deserved as an example of the feebleness of arguments to which a bad cause can reduce even the most skilled advocate.

In brief, Mr. Root's argument was that ocean shipping is now in an entirely artificial situation. The blessings of the tariff have raised American wages and the standard of living so much that it is impossible for Americans to compete with foreigners. The latter are, however, themselves on an artificial basis, for the various nations, according to hitherto unpublished figures read by Mr. Root, are spending more than forty millions of dollars in subsidies to keep their ships going. Brain, brawn, and ability on the sea are now absolutely discounted, the Senator assured his listeners; it has come to be merely a question who pours out the most money in aid of private enterprise; to him the mastery of the sea will go. Hence, Mr. Root besought his hearers, the members of the best, the wisest, the noblest, the most enterprising, the ablest, the richest Chamber of Commerce, to join him in insisting that we should complete the vicious circle by extending the blessings of the protective tariff to our merchant marine. Only put that upon an artificial basis also, and our flag will be in every harbor. We shall be the most artificial, and therefore, the happiest of nations. More than that, wherever ships go they are, said Mr. Root, the surest harbingers of peace—therefore let us have American ships to pacify the world.

It is obvious that from any other source—Mr. Depew, for instance—these arguments would not merit the dignity of a reply. But Mr. Root, who has himself opposed making a fetich of the protective system, may possibly, through his prestige, induce some of the members of the Chamber to believe that he told the whole story and showed the only way to recovering our lost shipping trade. Mr. Taft himself is a witness to the incompleteness of the statement, for he has lately admitted frankly that subsidies mean the taking of the money of all the people from the Treasury for the benefit of a few; but justifies it by saying that this is, after all, what the tariff is doing for the protected manufacturers. If Mr. Root had a sense of humor, he must have been inwardly amused at urging the Chamber of Commerce to go after foreign trade when the very object of our protective tariff is to cut down as far as possible the number of cargoes that foreigners can ship over the seas to us. Apparently, as long as we show the flag in various harbors it matters not whether our ships of the future shall make their return voyages empty—the Treasury will take care of all that.

Not one word came from Mr. Root's lips on our abominable navigation laws, which keep Americans from purchasing ships abroad and placing upon them the American flag. In the presence of the German Ambassador he spoke of the extraordinary prosperity of Germany's merchant marine, but naïvely overlooked the fact that German merchants, who have created their great fleet in forty years, have been free to purchase ships wherever they could get them cheapest. He also laid himself wholly open to the retort that if ships *per se* are harbingers of peace, German ships are quite as much so as English, and English as American. Waiving that, Mr. Root, besides free ships, wholly forgot the question of free raw materials for shipbuilders. Yet Republican shipbuilders who have built up our navy by grace of Republican imperialism have solemnly testified that the tariff makes a difference to them of 40 per cent. on "every conceivable item that goes into the cost of a ship." Here is artificiality with a vengeance.

That Mr. Root argues primarily for a mail subsidy rather than a tonnage bounty, makes no difference. The principle is the same. Grant the first, and it is but the opening wedge of special privilege; there will be boomers in plenty to insist upon more artificiality, upon the rescue of the tramp steamer which, whatever its flag, is disappearing from the Atlantic much as has the sailing-ship. Another Senator, Mr. Burton of Ohio, has denounced Mr. Root's proposed first step of rehabilitation as certain to be of no benefit to our marine interests and utterly un-American in principle. But most amazing of all is the fact that Senator Root should have urged upon shrewd business men the blunder of creating an economically wasteful business, the best argument for which is purely sentimental. American ships everybody wants, but only if they can justify themselves on their own merits. Would Mr. Root ask New York city shippers to patronize the New York Central Railroad purely out of State pride, if it charged as high rates as the other lines and in addition each shipper were forced to contribute to the cost of maintaining the railway? Yet that is precisely the ship-subsidy translated into land terms. Nor do ships in themselves create trade. If anybody doubts this, let him see for himself the great array of ships lying idle in British docks because trade is so bad. Finally, in the presence of distinguished foreigners, Mr. Root joined the ultra-protectionists in denying American capacity; to the Chamber which built up New York in earlier days through the enterprise of its Peabodys, its Grinnells, its John Jacob Astors, its Peter Coopers, he announced the passing of all need for sea-capacity, for daring, for skill, for wetting the sails and running before gales after the fashion of those dauntless Americans who did show our flag in every port and asked no grants from the Treasury.

THE STANDARD OIL DECISION.

Careful perusal of the opinion in Saturday's decision against the Standard Oil Company will, we think, convince most readers that it is not only sound law as the statutes stand, but is conservative interpretation of the law. The decision of the Circuit Court of Appeals is, like the Supreme Court's Northern Securities decision of 1904, levelled primarily against the holding-company device, when employed for monopolistic purposes. This is shown alike by the reasoning of the decision and by the order whereby the court undertakes to remedy the situation.

It is, the court points out, the effort of every person engaged in interstate com-

merce "to draw to himself to the exclusion of others, and thereby to monopolize, a part of that trade"; and this is not of itself illegal. But the oil combination goes further. The gist of its violation of law is "the combination and conspiracy of the numerous defendants, many of them formerly competitors, to restrain trade and to monopolize that commerce," and the achievement of such purpose through the contrivance of the holding company, without which such restraint "would not have existed and cannot continue." In its concluding order, the court does not enjoin the constituent companies from continuing business, but decrees that the holding company, the Standard Oil of New Jersey, shall receive no further dividends from such companies, and exercise no further control or voting right in their affairs. If the Supreme Court were to uphold the decision, the natural outcome, as in the case of the Northern Securities, would be the return of the stock in such constituent companies to the parties entitled to it under the trust.

In these conclusions, it is difficult to doubt that the Standard Oil decision is a logical sequel to that of the Northern Securities. The language of the court has, indeed, a peculiarly interesting bearing on the decision of 1904. The Northern Securities decision, it will be recalled, was the verdict of a divided court. Four justices on the Supreme Bench ruled against the company and four in its favor. The deciding vote was that of Justice Brewer. He dissented from the court's opinion against the company in its larger scope, on the ground that "Congress did not intend by that [Anti-Trust] Act to reach and destroy those minor contracts in partial restraint of trade which the long course of decisions at common law had affirmed were reasonable." But he also held that "if the parties interested in these two railway companies can, through the instrumentality of a holding corporation, place both under one control, then, in like manner, as was conceded on the argument by one of the counsel for the appellants, could the control of all the railways in the country be placed in a single corporation." On this ground, chiefly, he concurred in the decision against the Northern Securities.

That important admission by Mr. Johnson, counsel for the Northern Securities, indicated most plainly the evil against which the courts are acting, and the nature of the remedy which they are applying. It was a common criticism, after the Northern Securities dissolution, that since the same parties as had controlled the holding company still controlled the stocks of Northern Pacific and Great Northern, therefore the situation was not changed at all. But a moment's reflection should convince the simplest mind that the situation had been changed, and radically. The holding company, with the enormous facilities for future acquisition provided by its machinery of exchanging stock for stock, had been struck down, and the natural order of things in the investment market and among the railways had been restored.

The holding company is in reality an invention of our day, and the courts have been compelled to deal with it as a new thing. Introduced ostensibly, in the excited "promotion era" of 1899 and 1901, for the purpose of restraining destructive competition, it is still too recent an industrial contrivance to admit any confident prediction as to what conditions would ultimately be created by it. Thoughtful consideration of the problem, however, and the actual history of some of the larger combinations, have established certain facts which are far from reassuring. One is, that the price of staple articles might, through the medium of such a holding company, be advanced to extortionate heights in defiance of actual market conditions. This has been proved by the history of the Amalgamated Copper, a holding company. Another is, that enormous power over industrial and financial conditions might be exerted and permanently held by a very few men, controlling such a company though owning merely a small minority of its stock. This was in substance admitted by Mr. J. P. Morgan, who asserted it as a virtue in these enormous corporations that their capitalization might be made so great as to render impossible the unseating of existing managements.

The formidable possibilities created by the general introduction of such industrial machinery scarcely need to be pointed out. It was possible, even for economic writers, to argue that the producing costs should be greatly lowered through the friendly coöperation of many allied producers, and that stability of prices might be guaranteed through domination of one great corporation in a given trade. But it was also possible to picture a state of affairs, later on, in which not one industry, but all industries, might be so dominated by a group of men behind the holding companies that domestic competition would be no longer an efficient safeguard, and the consumer would be absolutely at the mercy of the controlling interests.

We do not believe that such a position has yet been reached in any industry. But the logic of the holding-company device pointed unmistakably to the possibility of such an outcome. The courts, we believe, have had that consideration always in view in their application of the Anti-Trust law. They have, however, also kept in view the principle that combination in itself is not illegal, and that the decision of the court as to its legality must depend on the nature, scope, and purpose of the power acquired through a given combination.

The Anti-Trust Act of 1890, under which the Northern Securities and Standard Oil decisions have been handed down, is an imperfect measure, in so far as it makes in its language no express discrimination regarding the character of combinations which it proscribes. Part of the present Administration's programme is to press for alteration or amendment of the statute on such lines. Meanwhile, however, it is clear from the language of Saturday's decision that the courts are observing such discrimination for themselves.

THE REFORMS IN INDIA.

Lord Morley has redeemed his promise to the people of India. The changes in Indian legislation and administration which went into effect last week are regarded by British opinion and by the great mass of moderate opinion in Hindustan as a decided step towards ultimate self-government. A few elementary facts concerning the British governmental system in India will make clear the nature and importance of Lord Morley's reforms.

Leaving out of account the India Office in London, the country as a whole is ruled by a Viceroy, or Governor-General, and a council of twenty members. The press dispatches are in evident error when they speak of an increase in the Viceroy's Council from 12[illegible]

bers to 370. The Viceroy's Council and all the provincial councils together number only about 140 members, and that is probably the total to which the 126 applies. The Viceroy's Council is subdivided into two. Seven members, all of whom up to last March were Englishmen, constitute a privy or executive council in whose hands the real powers of government are vested. For the purpose of making laws and regulations, thirteen additional members, Englishmen and natives, are called in. In the full council the natives form one-half of the membership. But, as Indian opinion used to complain, the "making of laws and regulations" did not partake of the essence of real law-making or administration. Government policy was shaped and Government secrets were discussed by the odd half-dozen of Ordinary Members among whom a native took his seat for the first time only six months ago.

For the purposes of administration India is divided into nine great provinces under governors, lieutenant-governors, or chief commissioners. Seven of the provinces have legislative councils made up, like the Viceroy's Council, of Englishmen and natives, in about equal numbers. But the sharp division between Hindus and Mohammedans among the natives, and the natural prestige of the ruling race, have given the English element control of the councils. Two of the seven provinces, Madras and Bombay, have small executive councils made up exclusively of Englishmen. As in the Viceroy's Council, the additional members, English and native, are called in to make "laws and regulations." In other words, the system over all India where legislative councils exist and natives are admitted to membership, virtually amounts to giving the natives the privilege of debating and ratifying policies and measures already decided upon by the British administrators. This is the system against which India protested and which Lord Morley's reforms have profoundly modified.

Under the new régime, the provincial councils are enlarged, and to the non-official element, which means practically the native element, is given an absolute majority in membership. The initiative in legislation and administrative policy will still come from the Government, of course, but members have the right to bring forward "supplementary" questions, or virtually to interpellate the Government. An absolute majority in the Council, even if it were restricted to the making of "laws and regulations" could force concessions by a policy of obstruction. But under the new régime the budget will come up for debate in the Councils. In any case, the British administrator will be driven to discard something of the air of omnipotence and omniscience which Mr. Kipling so rejoices to honor, and will have to explain and account, in increasing measure as time goes on, to the representatives of the people over whom he rules. In Bombay and Madras, where the real power is vested in the inner or executive council, natives are to be eligible for membership in that body. The reconstitution of the Viceroy's Council, which is to number sixty members, and not 370 as reported in the daily press, is not to be put into effect for a few months. But that is because, in the case of the Viceroy's Council, the most important step was already taken in March last, when a Bengali lawyer entered the innermost citadel of English power as an Ordinary Member.

Undoubtedly, this entrance of natives into the executive councils constitutes the most important concession to India. It is not unfair to look upon the British rule in India as the rule of a handful of conquerors imposed on a submissive but by no means reconciled population. That is the view which British opinion and Hindu opinion of all shades openly or implicitly recognize. It is a momentous step, therefore, that the representatives of the subject population shall be admitted into the innermost councils of the dominant race. Let us make the rather wild assumption that the Viceroy's Executive Council will have to take measures next year against the danger of a general native uprising. Such measures will have to be discussed in the presence of the Bengali member of the Governor's Council. It may very well be that Mr. Sinha will turn out the most loyal man in the Council. But the significant thing is that the Viceroy's Council will no longer have the aspect of the general staff of an army of occupation. It will be truly a Council for India, because India's native sons will make their voices heard in debate.

There is little reason to doubt that the new system will work well. The admirable thing about the British character is that it loyally recognizes the *fait accompli*. The London *Times*, which had fought concessions in India tooth and nail, is beginning to hope. "The capacity of the enlarged councils," it says, "will be judged mainly by their methods of treatment of the budgets. If a businesslike attitude be adopted by the Indian members instead of the present practice of diffuse speechmaking, with much ill-informed criticism, the official finance of the governments may benefit by the change of procedure." The principal danger in the way at present seems to be the possibility that the Hindu majorities may swamp the Mohammedan minority and lead to racial oppression. But the *Pax Britannica* has grown weak indeed, if it cannot hold a reckless Hindu majority under control.

JAPAN IN MANCHURIA

Our State Department's approval of the Chino-Japanese conventions concerning Manchuria signed on September 4, comes somewhat belated, but welcome nevertheless. We have it now authoritatively laid down that the open door is still open, that Japan's railway and mining concessions do not create a monopoly in her favor, and that Chinese rights in the territory occupied by Japan have been duly respected. Great Britain, Germany, and France, who presumably are as interested in maintaining their foothold in China as we are, at once expressed their satisfaction with the agreement between China and Japan. Questions which had been hanging in the air for years were disposed of, and that was an advantage for every one. We alone, in one of our sporadic awakenings to the immense importance of our interests in China, began to scent a devilish game by Japan. We were going to protest, we were not going to protest; we were going to send a man to the spot who knew how to push American commerce—we called him back before he got on board ship. Only after two and a half months of confused polemic, the State Department begs to state that there is no reason for growing excited.

The regular outcry against Japan's attempt to close the open door in Manchuria coincides with the regular outcry about the decline of American trade in China. Naturally, the two must be related as cause and effect. If our imports into Manchuria go down while Japan's go up, it must be because Japan

will have it so. We refuse to recognize that there can be any legitimate reasons why Japanese commerce should grow in Manchuria. Yet a moment's candid reflection would show that there are at least three powerful reasons. First, it is manifestly absurd to believe that such political paramountcy as Japan holds in Manchuria does not inevitably carry with it a trade advantage. A good many Americans, if we remember well, once had a good deal to say about trade following the flag. Much more reason is there now for Japanese trade following the Japanese flag across scarcely a hundred miles of sea. Without infringing even the spirit of the international agreements concerning equal opportunity in China, the Japanese Government would be more than human if it did not give its subjects broader opportunities for trade in Manchuria than the outsider can compass. Nor is any of the other nations in a position to throw stones.

A second factor in the growth of Japanese commerce in the Manchurian provinces is the increase of the Japanese population there. Korea has absorbed since the war possibly a half-million Japanese. Manchuria must have received a very large immigration. When we are told that the importation of Japanese cottons into Niuchwang has been making headway at the expense of the American product, it is well enough to remember that, other reasons aside, the Japanese immigrant is pretty sure to patronize the Japanese article. Here is a case where the Mikado's Government might indulge in absolutely Aristidean impartiality and yet be compelled to witness a steady growth of her imports into Manchuria. But neither the first nor the second reason can compare with the third great reason for the growth of Japanese trade—Japan's fitness to hold her own and more with the other Powers in fair economic competition. Again, it would be absurd to overlook Japan's enormous advantage in her proximity to the market, an advantage that did not count when Japan was in her industrial infancy, but one that must count tremendously when Japanese ingenuity and resourcefulness have mastered the processes and methods of industrial success. The energies of a nation called forth by a successful Titanic war for self-preservation are inevitably seeking an outlet in the industrial sphere.

What reasons exist under present conditions in this country for the growth of American commerce in Manchuria? We held a predominant place in that region ten years ago, largely because of lack of competition and in spite of our notoriously bad trade methods. Now there is Japanese competition to meet. To overcome Japan's advantage of an enormously cheaper labor market and much lower freights, what efforts have we made at home, what new resources have we brought to play on the Chinese market? At home the mockery of tariff-revision sends the cost of living steadily upward, and makes even the semblance of competition with Japan in the matter of labor-cost unthinkable. In China the American merchant clings to his fine antediluvian habit of carrying the stock he himself likes best, packing and labelling his wares to suit himself, and as for making himself familiar with the language and habits of his public—ridiculous!

Is it not now as plain as a pikestaff that if Japanese trade in Manchuria is growing and American trade is declining, it must be the wicked Japanese who are behind it all? Hence, we have piteous appeals to the State Department to keep the open door from being shut on American thumbs. Then come heroic measures for stimulating American interests with the strychnine and digitalis of railway loans forced down China's unwilling throat. At bottom, how sincere are our great manufacturers in all this pother about the disappearing Chinese market? If our tariff-fed industries displayed one-tenth the ingenuity in China that they expend in separating the American consumer from his money, they would not be howling every little while at the doors of the State Department. One fine Southern imagination has declared that if the Chinese people would add one inch to the length of their shirts, the product of our cotton mills would be doubled. But only let our tariff barons add one cent to what the American citizen pays for his yard of cotton cloth, and the Chinaman's shirt can go on lengthening till it sweeps the ground in sacerdotal folds, for all our manufacturers care.

RICHARD WATSON GILDER

Not often is the nation called upon to mourn a truer patriot than Richard Watson Gilder; not often has it been better served by one whose career was that of letters. For the inspiration of his pen was the desire to better not only the administration of the state, but the lot of every individual. So it has been that every civic movement of importance in New York city has turned instinctively to Mr. Gilder for encouragement, certain of his approval. The frail, delicate physique was lashed from one public service to another by the same dauntless spirit which, at seventeen, had made him a cannoneer at Gettysburg amid the hardships of a campaign that overcame many a stouter body—and always with a modesty so great that to far too many people the splendid character of the service rendered was quite unknown.

Not, however, to those who had followed or participated in the battle for a better and worthier New York. They know that Mr. Gilder took up the cause of the poor unasked, because his heart cried out against the conditions in which the poor lived and live; they know that in the work of the Gilder Tenement House Commission he set himself a monument of which any man might be proud. To his initiative and leadership more than to that of any other one man the three millions who live in New York's tenement houses owe the reforms which, as Jacob A. Riis has well said, "tore down a hundred 'dens of death' and gave the poor tenants' children playgrounds where before they had only the street and the gutter"; it was Richard Watson Gilder "who opened small parks and recreation piers, who compelled the building of new schools; who shaped the laws that made the tenant safe against the horrid peril of midnight fires"; thanks to him there were saved each year more than 12,000 infant lives. Yet great as was this civic achievement, the sum total of his many hundred others is even greater. In campaign after campaign for city righteousness he would take assignments to East Side meetings, often speaking in the open fairly at the risk of his life and always with complete self-abnegation.

The same kindliness and the same devotion to the highest ideals, the same simple modesty, characterized Mr. Gilder, the editor. The inspiration for those poems, lyrical and epigrammatic, for which as a writer he will chiefly be remembered, came largely from his pub-

lic service. Through all the exacting cares of so full a life he ever heard comforting melodies and wedded his activities to rhyme. If he never reached the poetical heights, he had the rare faculty of expressing popular emotion in graceful form. At dedications and other large public ceremonies his charm and tact rarely, if ever, failed him. In the volume of his collected verse, published only the other day, his poems of patriotism and civic duty are brought together and printed in capitals to correspond in type to the clear-cut style of the lines—as if they were meant to be cut in stone. Here, at times, he attained to true gravity and force. Who now, we may ask, shall inscribe Mr. Gilder's own character in fit and measured verse? In his sonnet to him Mr. William Watson has just—alas! in vain—urged Mr. Gilder still to

> sing with note sincere
> And English pure as English air hath heard,
> And so, though all the fops of style misuse
> Our great brave language—tricking out with beads
> This noble vesture that no frippery needs—
> Help still to save, while Time around him strews
> Old shards of empire, and much dust of creeds,
> The honor and the glory of the Muse.

But the greatest usefulness of lives like this is, after all, the assurance they give that, despite its shortcomings, in its finest citizenship America remains a land of ideals. There could be no more fitting time than this moment of the exposure of corruption in high finance, to recall to the country where the true human values really lie. Mr. Gilder owned no palace on Fifth Avenue; he had acquired no great means, and, in this "get-rich-quick" age, he had never taken care to cheat and bribe his way to the proud position of a multi-millionaire patron of the arts and sciences. It never occurred to his simple mind that greatness lay that way, that to serve one's country one should debauch its employees, and filch from its revenues. He never even deemed it desirable to purchase the highest legal talent to tell him how to circumvent the laws. And so he lived no life of luxury and commercial power, but a life that made him justly respected and cherished of all whose opinions were worth having. The friendship of every one bravely devoted to higher things was his, and rarely has any single New Yorker been beloved in so many places and circles. As it was said of Lecky, his was an extraordinary combination of gentleness and strength—the gentleness of righteousness, the strength of the unselfish patriot.

AUSTRALASIAN LITERATURE.

SYDNEY, November 1.

The literature of Australia and New Zealand is still largely merged in that of their Motherland. Australian authors often send their books to be published in London, desiring a wider recognition because they believe they are making contributions to English literature, or else despairing of such a sale at the Antipodes as will make the publication lucrative. Some of these have been authors before they relinquished academic or other positions "at home" to come out to Australia, where they have gained still higher positions, and where they continue the researches that have won them repute.

The writings of Professor Hearn of the University of Melbourne, belong to English literature. At first professor of classics in Queen's College, Belfast, he issued a volume on Economics, called "Plutology," which he afterwards recast and republished. About 1860 he published a work of greater importance, "The Government of England." It was remarkable, as the earliest attempt to apply the cosmic principles of Herbert Spencer to political history. At that date Spencer had reached only the second and still imperfect form of those principles about to be expounded in his "First Principles." It was a proof of Hearn's sagacity that, even so, he grasped their philosophical significance, and successfully applied them to the elucidation of English constitutional history. Does Dr. Hearn, asked at the time the skeptical *Saturday Review*, really believe that he is throwing light on that history by explaining it as a process of evolution, engineered by those two handy demiurges, integration and differentiation? No one asks so guileless a question now. When historians of the old school, like the late Samuel Gardiner, were confronted in the *Academy* (by the present writer) with the evolution of English kingship as described by Hearn, they were astonished and discomfited. Ten years after its publication the book was shown to Herbert Spencer with the remark that his name was only once mentioned in a volume of which not one line could have been written as it was but for his "Essays." The magnanimous philosopher seemed, however, more gratified with the application of his ideas than disappointed with the scanty acknowledgment made of their source.

Soon after he arrived in Australia Hearn was tempted, as C. H. Pearson the historian was tempted, by the allurements of politics and office. Unlike Pearson, he did not resign his professorship; but he was elected a member of the Legislative Council (or Senate), where his conspicuous talent soon made him a leader. He took an energetic part in the hot strife that waged for years between the first and second legislative chambers in Victoria over the right of the second to amend financial bills sent up by the first. He did not, however, sacrifice literature to politics. Always a secondary mind, deriving the generative concept of each work from some original thinker, he now assimilated the chief idea of his third treatise, "The Aryan Household," from Fustel de Coulanges's "La Cité antique." It was a remunerative loan, and it carried Hearn into fields of speculation far beyond the range of his primary author. His view of the origin of the state, in particular, was bold and novel, and showed that, if Spencer was his philosophical master, he was no slavish disciple. For the volume abounds in originalities, and it was notable for containing the first application of the evidence drawn from Indian history to determine the course of political evolution.

Hearn left behind him no pupils to carry on his work. The problems he grappled with were, however, approached from another point of view by inquirers trained in a very different school. A circular issued by Lewis Morgan, who put a number of queries to missionaries, travellers, and residents among savage peoples, fell into the hands of a missionary, Lorimer Fison, and A. W. Howitt, an Anglo-Australian. They unknowingly resumed the work of Sir George Grey in Western Australia thirty years before, when he discovered the system of exogamous clan-marriage. Fison and Howitt pushed their researches further, and discovered the unbounded privileges and the stern prohibitions attached to it. The subject had its comic sides, which excited derision. The black man on his travels could have, if a crow were his totem, a thousand wives belonging, say, to the kangaroo-clan. These writers also completed the solution of the problem, initiated by the discovery of exogamy, why a man could have no relations with his mother-in-law, though she might be his next-camp neighbor. Howitt continued his inquiries; and the results of them, stated in a work on "The Native Tribes of Southeast Australia," and in papers read before the Anthropological Institute, are recognized as first-hand sources of information on some of the most disputed points in anthropology.

In those days McLennan was still the chief authority on primitive marriage, and his condemnation of the first-fruits of Fison's and Howitt's inquir-

les, as shown in the answers to Lewis Morgan's queries, was authoritative and severe. He described them contemptuously as "a tangle of mystifications," as he had previously called Morgan's conclusions the product of delusion. When the results of the Australians' researches were afterwards published in a substantial form, they still met with little appreciation save from Tylor and Andrew Lang. Two new Australian inquirers were to confirm them in a decisive manner. Mr. Gillen had lived for twenty years among the Arunta tribe in Central Australia. Prof. Baldwin Spencer of the University of Melbourne had been trained by Tylor at Oxford. Both were believed by the blacks to be initiates. When, therefore, they engaged in the Horn Expedition of 1894 and the Syme Expedition of 1902, they were unhesitatingly granted access to all tribal ceremonies. The inner life of the tribes was laid open to them. Rites that had never before been witnessed by white men were seen and photographed. They gave the first account of the tribes between the Macdonnell Range of Central Australia and the Gulf of Carpentaria. They observed a gradual change in organization and beliefs as they passed from the more primitive tribes near Lake Eyre to the more advanced tribes of the Gulf, but yet established a fundamental likeness among them all. Some of the more specific conclusions are striking.

They ascertained the universality of the belief that children are not procreated, or, at all events, that every living member of a tribe is regarded as the incarnation of a spirit ancestor. They extended the area of the belief that the members of a totem-group are held answerable for the increase of the animal or plant that gives its name to a group. They have discovered that there is no radical difference in social organization between the tribes where female inheritance rules and those where descent is through the male line. But perhaps the most interesting of all their researches is that which has led them to the conclusion that the classificatory system of relationships first devised by Lewis Morgan, and confirmed as regards the Australian blacks by Fison and Howitt, is inexpugnable. The two latter inquirers the authors hold to be the founders of Australian anthropology. The structure that Gillen and Spencer have reared on that base in the volumes, "The Native Tribes of Central Australia" and "The Northern Tribes of Central Australia," is of inestimable value and high authority.

While these researches were being pursued on the continent, parallel inquiries were prosecuted in the adjacent islands of New Zealand. The "Polynesian Mythology" of Sir George Grey (of which a second edition, unrevised, has been issued by the Government) needed to be corrected and supplemented. John White had lived long among the Maoris in an official capacity, knew their usages and their beliefs as no other ever did, and had embodied fragments of his erudition in a fictitious narrative, "Te Rou." He was no less deeply acquainted with their legends and myths, and he was commissioned by the Government to translate his accumulations and to put them in literary form. After exasperating delays, there at length appeared a succession of volumes ("The Ancient History of the Maori"; Wellington, N. Z.), which was brought to a close, not to an end, by the editor's sudden death. The results are valuable, but perhaps need sifting. Of portions of the first-issued volume Sir George Grey declared to the present writer that White had sometimes mistaken obscene Maori songs for theological myths. But he brought together a large legendary collection, drawn from many different sources and derived from the very lips of priests and chiefs.

The pen that Death struck from the hand of White has been taken up by Johannes Carl Andersen. Of Danish birth, but of New Zealand rearing, he has come to the primitive Maori with a mind steeped in Scandinavian lore. A poet himself, his work ("Maori Life in Aotea"; Christchurch, N. Z.) is an attempt at an imaginative and sympathetic realization of the life the old Maori led. He is vividly portrayed in war and in peace, as cultivator, wood-carver, hunter, and sea-farer. He is seen, no less, in his recreations—in the ceremonious *haka*, and in the fireside recital of legends concerning fairies, demons, and gods. He is depicted as a warrior, creeping like a sleuth-hound on the track of his foe, crafty, remorseless, implacable, and, at the orgies of the cannibal feast, a very brute. Using White's collections, which he calls his "basework", and calling to his aid all appropriate contemporary research, Mr. Andersen has produced a very interesting volume, solid in its erudition, glowing in its idealization, and strangely attractive by its exotic manner of dramatic presentment. It is the work of an ancient skald in the South Seas. Mr. Ngata, a pure-blooded chief who writes the best English, a legislator who is on his way to cabinet rank, vouches equally for the broad truth of the pictured scenes and the accuracy of their details. Mr. Andersen believes that the painter and the sculptor will find in Maori lore subjects for many a canvas, figure, or group; and poets will discover matter enough for twenty epics. His own book is perhaps the first of those epics.

Two other recent New Zealand works, both published by Whitcombe and Tombs, Christchurch, deserve to be mentioned. One of them, Earle's "Nine Months Residence in New Zealand in 1827," is a reprint of a book first issued in 1832, when New Zealand was a land almost unknown save to the missionary and the beach-comber. In it were first made those charges against the Anglican missionaries, of appropriating Maori lands, which were sheeted home to them nineteen years later by Gov. Grey. In the *Quarterly Review* Southey (for it was evidently he) warned his readers that Earle's "statements must be received, for the present, with anything but rash confidence." The other book, "Bishop Harper and the Canterbury Settlement," by the Rev. H. T. Purchas, instructively shows once more how large a part is still played by the priests in the infancy of a community. The venerable prelate lived to see the young "settlement" become an important province in a new federation. We may add that he was the brother of that Jesuit father who has given a commanding synthetic view of the Scholastic philosophy, which also belonged to the less advanced stages of society.

J. C.

NEWS FOR BIBLIOPHILES.

Louis I. Haber is another of the older book-collectors who are sending their treasures to the auction room. Mr. Haber has been collecting about twenty-five years, and many of his books and manuscripts were bought at prices which will be exceeded many times over at the sale to be held by the Anderson Auction Co. in twelve sessions, afternoons and evenings of December 1 and 2, 7, 8, 9 and 10. Part I, to be sold next week, contains the books from A to K of the alphabet, with a selection of the important literary manuscripts. Among the early English books are Gower's "Confessio Amantis" (1532), Barclay's "Ship of Fooles" (1570), Chaucer's "Workes" (the undated edition printed about 1550), John Heywood's "Woorkes" (1577), and Roger Ascham's "Toxophilus" (1571) and "Schole Master" (1579). Among books of the Seventeenth Century are Ben Jonson's "Works" (1616), Chapman's "Whole Works of Homer" (1616), Beaumont and Fletcher's "Comedies and Tragedies" (1647), Burton's "Anatomy of Melancholy" (1621), Greene's "Never Too Late to Mend" (1607), Cowley's "Poetical Blossoms" (1633), Phineas Fletcher's "Purple Island" (1633), and Herrick's "Hesperides" (1648). Of modern authors there are first editions of Keats's "Poems" (1817), "Endymion" (1818), and "Lamia" (1820); and books by Mrs. Browning, Matthew Arnold, Dobson, Gosse, Eugene Field, and other authors, English and American. Among club publications are nearly complete sets of the publications of the Grolier Club, the Bibliographical Society, and the Bibliophile Society, with a long series of William Loring Andrews's books and specimens of the Kelmscott, Daniel, and other presses. The manuscripts in this portion include a twenty-eight-page letter of Keats; a translation in Irving's autograph of a part of Sahagun's "Conquest of Mexico," 86 pages; O. W. Holmes's "The Stereoscope and

the Stereograph," thirty-one and a half pages; Bret Harte's "Lothaw," thirty-nine pages; J. Fenimore Cooper's "Life of Richard Dale," sixteen pages; Conan Doyle's "The Sign of the Four," 160 pages; and two sketches by Mark Twain, a set of autograph letters of the Presidents, and other interesting documents.

On Tuesday, November 30, the same auctioneers will sell Frank Maier's collection of miscellaneous autographs. There is a manuscript by Longfellow of his poem "The Children's Hour" on four pages, quarto; a manuscript by Holmes of "The Voiceless," one-page quarto; and letters of Carlyle, Gladstone, Dickens, Cooper, Hawthorne, Leigh Hunt, Oscar Wilde, Gen. Grant, and others.

On the evening of December 3 they will sell a collection of Japanese prints, upwards of two hundred lots, and some Japanese stamps and coins.

The collection of the late Clarence H. Clark of Philadelphia is to be dispersed this season by Stan V. Henkels, in several sales, the first being on November 30, afternoon and evening. This library is perhaps most notable for the extra illustrated copy of the Works of John Lothrop Motley, extended from nine to twenty-seven volumes and inlaid from octavo to folio. Mrs. Clark was a daughter of the historian, and on this account Mr. Clark took especial pride in building up this set, having spent, it is said, $35,000 upon it. The first sale includes also the illuminated manuscripts, among them being a fine Book of Hours of the Fourteenth Century, on 186 leaves, with thirteen full-page miniatures and twenty-four smaller ones, and an interesting Persian manuscript, being the "Shah Nameh" of Firdausi, of sixteenth century execution. There are several of the most famous books from the Elzevir. Among early Americana are Bullock's "Virginia Impartially Examined" (1649); Champlain's Voyages (1632), with the large map in facsimile; Capt. John Smith's "True Travels" (1630); the very rare "Breeden-Raedt aende Vereenichde Nederlandsche Provintien" (1649), and De-Vries's "Korte Historiael" (1655), the last two being among the earliest printed books relating to New York. Many of the books are in elaborate tooled or inlaid bindings.

On December 1 and 2, C. F. Libbie & Co., in Boston, will sell the libraries of W. K. Stafford of Newton, Mass., and William Parsons Lunt of Boston. The collection is chiefly notable for the books and pamphlets relating to the Indians and for American local history, especially books on Michigan, the region of the Great Lakes, and California.

Hawthorne's first book, "Fanshawe, a Tale" (Boston, 1828), a fine copy, sold in the first Maier sale last week for $350, and other first editions of Hawthorne sold at moderate prices: "The Sister Years" (1839) bringing $150; "The Celestial Railroad" (1843), $140; and "Time's Portraiture" (1853), $50.

Correspondence.

THE BURIAL OF SIR JOHN MOORE.

To the Editor of The Nation:

Sir: Few poems have been more often reprinted than "The Burial of Sir John Moore," but no two of the copies, even in the best anthologies, agree exactly in their reading. Concerning one of these variations, "sullenly," or "suddenly," in the seventh stanza, there has often been lively discussion among editors and critics; some asserting that "suddenly" is the only authoritative reading, others saying that Wolfe wrote "sullenly" at first, but afterward "altered it at the suggestion of a literary friend."

This latter statement, based upon a note from "an early friend of the author" (printed in the London *Morning Chronicle*, October 29, 1824), is incorrect. The "early friend," commenting on the line, "That the foe was suddenly firing," says that it "was originally written" thus: "Of the enemy sullenly firing." But the Rev. John A. Russell, in the "Remains of the Rev. Charles Wolfe," 1825, remarks that the line was at first written, "That the foe was sullenly firing"—the reading in the text as he prints it. He adds:

> It was subsequently altered as he [the writer in the *Morning Chronicle*] gives it, at the suggestion of a literary friend; but it seems proper to print it as it actually stands in the author's own manuscript, from which I take it. There is no difference in sense; but perhaps some may think the rhythm better as it was originally written.

This obviously refers, not to "sullenly" (which is the same in both readings, and which *would* make a serious difference in the sense), but to the words that *precede* "sullenly." I cannot, however, agree with Archdeacon Russell, that the "rhythm" of "That the foe was" is possibly better than that of "Of the enemy," which Wolfe adopted when it was suggested.

That "sullenly" was the original and the only reading of the poet is definitely settled by a communication I received more than ten years ago enclosing a careful copy of a letter from Wolfe, written immediately after he completed the poem. I regret that I have lost or mislaid the letter accompanying this interesting manuscript, and cannot recall the name of the sender. The original letter of Wolfe was somewhat worn and torn, and its imperfections are minutely indicated in the copy; but luckily they do not obscure the text, the only lost *words* being "rest" and "him," in the last two lines of the third stanza, with the last letter of "him" in the preceding line and the first letter of "Few" at the beginning of the next stanza.

The letter is addressed (on the same sheet containing the poem) to

> John Taylor Esq
> at the Revd Mr. Armstrong's
> Clononlly
> Cashel

It begins (or the portion copied does) thus:

> I have completed the Burial of Sir John Moore, & will here inflict it upon you; you have no one but yourself to blame, for praising the two stanzas that I told you so much
> [here there is something lost]

The text of the poem follows in the spelling and pointing of the original. The stanzas are numbered 1, 2, 3, etc.

> Not a drum was heard, not a funeral note,
> As his corse to the rampart we hurried;
> Not a Soldier discharged his farewell shot
> O'er the grave where our Hero we buried.
>
> We buried him darkly, at dead of night,
> The sods with our bayonets turning;
> By the struggling moonbeam's misty light,
> And the lanthorn dimly burning.
>
> No useless coffin enclosed his breast
> Not in sheet or in shroud we wound [him],
> But he lay like a Warrior taking his [rest],
> With his martial cloak around [him].
>
> [F]ew and short were the prayers we said
> And we spoke not a word of sorrow
> But we steadfastly gaz'd on the face that was dead,
> And we bitterly thought of the morrow;
>
> We thought, as we hollow'd his narrow bed,
> And smooth'd down his lonely pillow;
> That the Foe & the Stranger would tread o'er his head
> And we far away on the billow!
>
> Lightly they'll talk of the Spirit that's gone,
> And o'er his cold ashes upbraid him
> But little he'll reck, if they let him sleep on
> In the grave where a Briton has laid him.
>
> But half of our heavy task was done,
> When the clock struck the note for retiring,
> And we heard the distant & random gun
> That the Foe was sullenly firing
>
> Slowly & sadly we laid him down
> From the field of his fame fresh and gory
> We carv'd not a line, and we rais'd not a stone
> But we left him alone with his glory.

The poet adds:

> Pray write soon—You may direct as usual to College [Trinity College, Dublin] & it will follow me to the Country
> Give my love to Armstrong, & Believe me
> My Dear John
> Ever Yours
> Charles Wolfe.

The letter is not dated, but is postmarked Sept. 6, 1816.

According to the "Remains," the poem was first printed "without the concurrence or knowledge of the author." The editor adds:

> It was recited by a friend in presence of a gentleman travelling towards the north of Ireland, who was so much struck with it that he requested and obtained a copy; and immediately after [in 1817], it appeared in the *Newry Telegraph*, with the initials of the author's name. From thence it was copied into most of the London prints, and thence into the Dublin papers; and subsequently it appeared, with some considerable errors, in the *Edinburgh Annual Register*, which contained the narrative that first kindled the poet's feelings on the subject.

The biographer seems not to have known (and I do not remember to have seen any reference to the fact, which I accidentally discovered in preparing for this present writing) that the poem was printed in the first volume of *Blackwood's Magazine* (June, 1817, p. 277), with "some considerable errors," like "Nor in sheet nor"; "the face of the dead"; "tolled the hour"; "suddenly firing"; and the omission of "and" in the last line but one. The initials of the author are omitted (as probably in the newspaper reprints from the *Newry Telegraph*), and the editor appends the following footnote:

> This little poem first appeared in some of the newspapers a few days ago. It is too beautiful not to deserve preservation in a safer repository; and we have, accordingly, inserted it among our original poems. —[Ed.

In the "Remains" (1825), the only variation from the text of the letter to John Taylor is "hour" for "note"; and the only other change made by the poet appears to have been "Of the enemy" for "That the foe was," where the archdeacon, as we have seen, preferred to retain the original reading. These two authorities—the letter and the book—are the only trustworthy ones for the text as the poet left it at the time of his death, in February, 1823. The corruptions began, as those in *Blackwood* prove, as soon as the poem was printed (probably in the *Newry Telegraph*, where

tho author saw no "proof" of it), and have continued and multiplied ever since. I have examined many texts, English and American, but have found none that are absolutely correct.

Ward's "English Poets" (Vol. IV, p. 323) is one of the most accurate, but it retains "That the foe was," and in the third stanza has "nor" for "or" in the second line. In Linton and Stoddard's "Lyrics of the Nineteenth Century" (New York, 1883), where the reading (p. 102) is "suddenly," a note says: "*Sullenly* is generally misprinted for *suddenly*. Wolfe's manuscript has *suddenly*." The corruptions in *Blackwood* have all been copied in many reprints. Others are "confined" for "enclosed"; the insertion of commas before and after "like a warrior," marring both rhythm and sentiment, "ramparts" for "rampart"; "And we knew by (or "heard by") the distant and random gun that the foe," etc.; "told the hour"; etc.

The "Remains" contained twelve other poems by Wolfe (with two schoolboy efforts in blank verse), but none of them were printed during his life. The volume also contains a few prose sketches and fifteen sermons, none of which, as the editor remarks, "were designed by their author for publication," all being, "with a single exception, composed for a plain but intelligent congregation." They are markedly simple in style, with not a single poetical quotation, or any other rhetorical embellishment.

A long and eulogistic review of the book appeared in *Blackwood*, for March, 1826 (Vol. XIX, p. 323), both verse and prose receiving far more praise than they deserved. For instance, the song, "Go, forget me," which became popular when set to music, is declared to be "exceedingly beautiful—not only in thought and feeling, but in expression—and is sufficient to prove that he [Wolfe] had the deep and fine sensibility of the poet. The pathos is pure and tender as the moonlight." The first stanza, which is decidedly the best of the three, reads thus:

> Go, forget me—why should sorrow
> O'er that brow a shadow fling?
> Go, forget me—and to-morrow
> Brightly smile and sweetly sing.
> Smile—though I shall not be near thee;
> Sing—though I shall never hear thee:
> May thy soul with pleasure shine
> Lasting as the gloom of mine!
> Go, forget me, etc.

I remember hearing it sung by young friends some sixty or more years ago.

Strangely enough, the reviewer is doubtful whether Wolfe wrote the poem that made him famous. He asks:

> How could Mr. Russell publish the celebrated lines on the death of Sir John Moore as the production of Mr. Wolfe without giving any proof whatever that they are so? . . . Medwin knew no more of the matter than any coal-porter on Dublin Quay.

Medwin, in his "Conversations of Byron," as quoted by Russell, had referred to Byron's reading the poem to Shelley and other friends, and calling it "little inferior to the best which the present prolific age has brought forth." After reading it, he "repeated the third stanza, and said it was *perfect*, particularly the lines, 'But he lay like a warrior taking his rest, etc." Shelley said that he should have taken the poem "for a rough sketch of Campbell's," but Byron replied: "No; Campbell would have claimed it if it had been his."

The review in *Blackwood*, it will be seen, was written almost two years after the history of the poem had appeared in the London *Morning Chronicle*, and nine years after *Blackwood* had printed and praised it. It is amazing that the editor had not found out—or had forgotten—who wrote it. In the next number of the magazine (April, p. 489), he prints a letter from Rev. S. D. Sullivan, who says: "The poem was commenced one evening in my company, . . . and the first and last stanzas were actually composed in the same evening and recited by the author before he had committed them to paper"; and the other stanzas were completed soon afterward.

The poem which has immortalized both its author and his hero was at first ascribed to Byron, who regretfully disclaimed it, and was reprinted again and again in England before it was traced to its real source. Meanwhile it was claimed by at least one impostor, who sent to *Blackwood* a poor "Address to Sleep," purporting to be written by the same unknown hand. It was also disparaged by sundry critics who asserted that it was little more than a paraphrase of the report of Moore's death and burial printed in the *Edinburgh Annual Register* for 1808, although the battle at Corunna did not occur until the 19th of January, 1809. The poem, moreover, varies from the report printed, in due season, in the *Register*, in representing the burial as taking place "at dead of night," while it must have been towards daybreak, as the "firing" which led to its being "hastened" for fear that it might be interrupted was "about eight in the morning." The full report is quoted in the "Remains."

It has been asserted again and again that the poem was a close translation of the French "Les Funérailles de Beaumanoir," which may be found in Father Prout's "Reliques" (Bohn's ed. p. 312), being one of his sportive renderings of many poems by Moore and others, in French, Italian, Spanish, Greek, and Latin. It professes to be a tribute to a certain Col. de Beaumanoir, killed in the defence of Pondicherry in 1640. Prout adds that "no translation is necessary, the Rev. Mr. Wolfe having reproduced it on the occasion of Sir John Moore's fall at Corunna under similar circumstances."

The fiction was not intended to deceive, but several writers have been entrapped by it, the latest repetition having been sent as "An Astonishing Discovery" to the *Critic* for July, 1906 (Vol. XLIX, p. 52). In the number for September (p. 195) the editors admit that they have been "hoaxed," but express the hope that it was not intentionally done. Certain alterations in Prout's story, however, suggest that it was carefully planned to deceive.

The "Remains" went through many editions abroad, the ninth of which (London, 1847) brings out the very interesting fact that the *Morning Chronicle* writer was "John Sidney Taylor," who must have been the "John Taylor" to whom Wolfe sent the letter given above.

SUMMER SCHOOLS.

To the Editor of The Nation:

Sir: In your issue of September 2, Prof. William MacDonald outlines briefly the development and the present status of the summer school. He calls attention to the preponderance of teachers among those who attend summer schools; to the pedagogical aspect of summer school curricula, noting particularly their ineffectiveness in "the spread of higher education"; and, in conclusion, appears to intimate that the ideal of the summer school should be to continue the same kind of educational work in operation during the regular session.

While I am in accord with much that Professor MacDonald says, there are a few points of dissent. My attitude towards summer schools is based on experience as a public school teacher who formerly attended summer sessions; as a teacher in summer schools myself; and as a professor for several years in one of the smaller colleges. This retrospect may account for our slightly different views.

The record of about fifteen years in several of our summer schools shows that these sessions have been continued because of the sustained attendance of teachers. The attendance of regular college students during the summer session has not grown, and indeed has not been sufficient to warrant maintaining the summer school. It appears, therefore, that the summer school is kept up for those who are professionally engaged in teaching; and the majority of these are teaching in the public schools. It must be conceded that the instruction given should be that desired, and in all probability needed, by those who attend. Consequently there is no occasion for concern over the fact that in summer sessions we do not continue the same nature of work that is given during the regular college year; to do so would subvert what experience shows is the chief function of the summer school.

Of my own classes, while on the staff for four sessions in the Cornell Summer School, and one session (1909) in that of the University of Virginia, teachers constituted at least 90 per cent. Nevertheless, I seldom noted any obtrusive pedagogical interest, certainly never at the expense of subject matter. Lessons assigned were prepared conscientiously; laboratory and field tasks were eagerly completed. I was usually satisfied with the progress made by these teacher-students, and rarely felt they had not accomplished at least as much as I should expect of regular college students. The number who had enjoyed an academic college training was very small. In mental alertness, however, the average woman who has taught several years in our public schools compares very favorably with the average senior in college. These teachers are deficient in training so far as set courses are concerned, but their experience has brought them intellectual results of the same nature, if not of the same degree, as we attribute to the regulation college course.

The zeal of these teachers in their summer studies is generally conceded. If there were as much sustained interest in our college classes during the year, the laboratory and lecture room would be a pleasanter recollection to students when, later, they are men in business. I believe that most

of us find summer teaching, foregoing the inconveniences of the season, less arduous than the work of the regular session, largely because the preponderance of teachers in our classes divides between the instructor and the student the question of enthusiasm, whereas during the regular session the professor generally has to supply it all.

It is possible that many men who give instruction in our summer schools, lose sight of what seems to me the important privilege of the colleges and universities that maintain summer sessions. The fact that every year several thousand teachers from both secondary and high schools place themselves under the instruction of the college or university professor gives the latter some opportunity to be of great service to these teachers and, therefore, to do a little, at least, towards making the schools below the college conform to his ideals.

I am glad to read a protest against "extension" work and the "listener." A summer school of the Chautauqua type is a menace; it affords slight recreation, and practically no education. Progress comes only through serious work; merely listening to lectures, and watching demonstrations, unless supplemented by thorough reading and study, is almost wasting one's time.

RULES OF THE BODLEIAN.

TO THE EDITOR OF THE NATION:

SIR: Of the many American readers who have worked in the Bodleian Library, probably few have ever become familiar with the Staff-Kalendar, published by the Librarian annually for some years past, the 1909 edition of which has just come to my hand. This extraordinary little book, measuring only two and a half inches by four and a half, is a veritable revelation in what it shows—still more in what it implies—of the system that has grown up for centuries in connection with the administration of the venerable library whose name it bears. Who that has labored dreamingly among the ancient tomes in Duke Humphrey's room, occasionally pondering on the simplicity and quiet that reign there, in contrast with the noise and fussiness of the Bibliothèque Nationale, has realized that every man and boy employed in the library carries a printed book in which it is recorded that on February 1 the east end of "the H" is to be swept, that on February 8 the Bodley clocks are to be wound and set, and that on February 27 the Camera chimney and flues are to be cleaned? Or who that has received his books from the charming little boys that glide about the place has imagined that they are hedged about with an aggregation of rules seemingly utterly irrelevant to such gentle creatures?—as that "no bullying or assumption of authority will be tolerated," and that "boys must not run violently on stairs." Their regulations are also in part of a kindly paternal tone. Thus the Oxford climate has developed a paragraph admonishing that, "as boots often let in water unexpectedly, every boy is advised to keep at the library a dry pair of boots and a dry pair of socks." Boys are also warned against reading in a bad light—as though any other kind could be found during a good part of the Oxford winter! "It is no answer to say that they can see perfectly, because the more short-sighted they were becoming the better they *would* see in a bad light."

This bit of refutation brings out the fact that, whatever objection or exception or occasion you may postulate, you will find that the Staff-Kalendar has foreseen the contingency. Here is a note suggestive of many troublesome letters, following an elaborate account of the fire-alarm system: "Other libraries desiring information as to the details of this system are begged *not* to write to the Librarian, but to the Expansion Sprinkler Syndicate," etc. Yet a moment later, in a mollified mood, the Librarian adds that he "might, however, be willing to answer inquiries as to whether the system had or had not given satisfaction." The fire-alarm question runs through all the Kalendar, and one derives the impression that a kind of hysteria, or pyrophobia, pervades the place. Undergraduate demonstrations are clearly one of the chief causes of alarm—perhaps on other grounds also; at any rate, the staff is warned on every day from May 21 to June 2 that "eights celebrations [are] to be watched for." Street bonfires are a matter of special concern, and if they are not extinguished, on request, by the policeman on duty ("which *has* happened"), appeal is at once to be taken to higher powers. Most impressive, however, in this connection, are the warnings against carrying any kind of light, or striking any match, in the Bodleian building; these go back to a Latin statute of 1610, and have been sanctified further by various interpretations and enforcements. "In 1901 a newly admitted foreign reader lighted a cigarette in going down the Bodleian stairs, and his admission was cancelled." But later something still more tragic occurred. "In 1903 a graduate of forty-five years' standing struck a light on the same staircase, to examine a picture by, and was informed that he must never again enter the building: *the picture itself was removed.*" This last clause, whose italics are ours, certainly gives a fitting final touch to the solemnity of the subject. Talk of hanging animals for crime! That was child's play compared with punishing a picture, by forbidding it to hang, for inciting a venerable man to misconduct.

Enough of details. One thing is certain: "who touches this book touches a man." Not only the reverend past of Bodley's Library, but the arresting personality of Bodley's present librarian, make the Kalendar far more than the merely utilitarian production it professes to be.

LECTOR.

THE READING OF VERSE.

TO THE EDITOR OF THE NATION:

SIR: Professor Gummere's plea in the *Nation* of November 11 for the reading of verse as verse is just and timely. Not only the professional readers and actors in vogue, as well as the delicate-handed dilettanti of our most esoteric circles, but too many of our most advanced young gentlemen profess and practise the pernicious heresy of reading verse as prose, sternly denying time-values to poetic lines, and resolutely submerging the emotional and the æsthetic elements of measured speech in the logical and analytical elements.

Whence comes this tendency? Is it an outgrowth of the attempt of Whitman and those who came after him to loosen the shackles of regular rhythm? Does it result from the disintegration of modern blank verse and its resolution into a bastard prose? Or is it simply due to the subjection of our generation to the pervasive influence of the scientific habit of mind and all its implications?

Our contemporary poets—those of the widest influence, at any rate—are not chargeable with it, nor do they countenance it. Rather, are not the new and pronounced rhythms of the schools of Kipling and of Swinburne protests against this tendency and landmarks in a new reaction against over-refinement and emasculation of rhythm and the levelling of verse into prose? Even the tyro or the iconoclast can hardly render such movements of speech as

Thus saith the Lord in the vault above the cherubim,
Calling to the angels and the souls in their degree—

otherwise than with the rolling rhythm of chant or pæan.

The sensuous effect of flowing measures, the glamour of verse and its spell, are still the things sought for. Herrick's "holy incantation of this verse" is still felt today as the test and touchstone of poetry. Are our neoterics in their turn trying to start a reaction against even the newest school of poetry?

I fear that much of the blame rests with those who profess to teach literature from the chairs of learning. How many of our college teachers can sincerely testify that they themselves have never subscribed to this heresy, in practice if not in theory?

Literature.

H. M. STANLEY.

The Autobiography of Sir Henry Morton Stanley, G.C.B. Edited by his wife, Dorothy Stanley. With sixteen photogravures and a map. Boston: Houghton Mifflin Co. $5 net.

Stanley's story of his early life is not only profoundly interesting, but is full of stimulating thoughts and experiences, especially for young men. For it is the story of one who, "without a parent, relation, or friend on earth to turn to," began his life in a workhouse and ended it in Westminster Abbey. The name, *Bula Matari*, "Breaker of Rocks," given him by the natives who saw him with drill and hammer helping to hew a road around the rapids of the Congo, and engraven on his tomb, fitly characterize a man who from his youth victoriously battled with the hardest that earth could afford. To those who know him only as the African explorer the story of his early career will be full of surprises. John Rowlands by name, his father having died in his infancy and

his mother having cast him off, he was brought up in a Welsh workhouse. Here he stayed till he was fifteen, when, on account of inhuman treatment, he escaped from the "house of torture" and shipped as cabin-boy on a vessel bound from Liverpool to New Orleans. It was in those days the custom of many shipmasters to be so cruel to their boys that they would desert on reaching port, and so forfeit their wages. This was the case with our hero, and his next years were spent in the South in shops, on plantations, and on a flatboat. On the breaking out of the civil war he enlisted in the Sixth Arkansas Regiment. At the Battle of Shiloh he was taken prisoner and carried to Chicago. Here his sufferings in the prison at Camp Douglas were so great that, to secure his release, he enlisted in the Union army, his sympathies also now being entirely with the North. Being discharged on account of having "prison-disease," he joined the navy as "ship's writer." In this capacity he took part in the capture of Fort Fisher, a graphic account of which he sent to the newspapers, and so began his career as a correspondent. The real autobiography ends with his discharge from the army on June 22, 1862, when, without a penny in his pocket, he worked his way from Harper's Ferry to Baltimore.

As the record was written nearly at the close of Stanley's active life, it is not impossible that the boyish thoughts and aspirations here portrayed may be to some extent the product of his maturer years. But of their general accuracy and truthfulness one may be assured by the success of his later life. This success was won, it is evident, by his determination to do his duty, to make the best of everything, and not to give way to discouragement. "I exclude all words like 'fail,' 'can't,' from my vocabulary," he writes at a depressing period. "I have nothing to fall back upon but energy, and much hopefulness," is another inspiring thought; as is also, "I mean by attention to my business, by self-denial, by indefatigable energy, to become, by this very business, my own master, and that of others." Another striking characteristic, which is but little emphasized in his published works, is the religious strain running through the whole of his life. While in the workhouse a conviction came which never left him, that, though without an earthly father, "he had a Father in Heaven." When he landed in New Orleans the book in his pocket was a Bible given him in the workhouse for "general good conduct," and the first man whom he asked for employment, seeing it, became interested in him and finally adopted him, giving him his name. This Bible, it may be added, was the one book which he took with him when he went in search of Livingstone.

The personality of the Stanley, who, as special correspondent, accompanied the British Abyssinian and Ashantee expeditions and our Gen. Hancock's campaign against the Comanches, who sought for Livingstone in the wilds of Africa and founded the Congo State, the "traveller in five continents" and the member of Parliament, is revealed by extracts from his journals, note-books, and private letters. Lady Stanley links together the different parts with many interesting and reminiscent passages, her predominant aim being to show "something of the working of his own mind and heart." So he thinks aloud, as it were, on almost every page. Very little material is taken from his published writings, ten in number, and much new light is thrown upon the varied experiences in this, the most important part of his life. Among other things, he says that Livingstone's "return to home and kindred—though he found his energies waning, age creeping on him, and fettering him in its strong bonds—was prevented by an overscrupulous fidelity to a promise that he had made to his friend, Sir R. Murchison, that he would set the matter of that watershed north of the Tanganyika at rest." An ardent affection for the self-sacrificing missionary was kindled in his breast during the four months they were together, and when the parting hour came, "I was as a sensitive child of eight or so, and yielded to such bursts of tears that only such a scene as this could have forced." The inspiration of Livingstone's example had much to do with the founding of the Congo State. For, in this, Stanley's main purpose and passion was the "betterment of mankind; . . . to pour the civilization of Europe into the barbarism of Africa." Apparently, he did all in his power to induce his countrymen to undertake this noble task, "but the government and the people of England turned a deaf ear" to his pleas. An interview with Mr. Gladstone in 1890, shows how little was the interest of the ex-Premier in Africa's crying needs. This was not the case with Queen Victoria, who sent for him on his return from his Livingstone expedition:

> The conversation, which was principally about Livingstone and Africa, though it did not last more than ten minutes, gave me abundant matter to think about, from having had such good opportunities to look into her eyes, and absorb as it were my impressions, such as they were. What I admired most was the sense of power the eyes revealed, and a quiet, but unmistakeable, kindly condescension; and an inimitable calmness and self-possession. I was glad to have seen her, not only for the honor, and all that, but also, I think, because I have carried something away to muse over at leisure. I am richer in the understanding of power and dominion, sitting enthroned on human features.

The closing years of this adventurous life were spent in travelling, giving lectures, and in Parliament. His travels extended to Australia and South Africa, where, in 1897, he went in Pretoria to the house of President Krüger, of whom he gives one of the most graphic descriptions we remember to have read:

> You have seen lots of stout-bodied old Parisian concierges; and I dare say you have seen them in their seedy black clothes, when going out on a visit; put a little top-hat on one of them, give him stooping shoulders, with a heavy, lumbering, biggish body, and you will know Krüger at once! Well! let him sit vis-à vis to you; put much obstinacy into a face that is unusually large, with an inch of forehead and two small eyes; let the figure sink in his chair, with an attitude of determination in every line, and give him a big briarwood pipe, which is held in his left hand, and there you have him.

Taking the autobiography as a whole, it is a work of remarkable interest and value, not so much on account of the information which it gives, as for the spirit with which Stanley approached the hard life-problems he had to solve. Should it reach a second edition, we would recommend that two episodes of his boyhood in this country be omitted, on account of their suggestiveness to the youthful reader. Ten of the sixteen illustrations are portraits showing him at different ages from 15 to 54, and on a map of tropical Africa are traced the routes of his three great expeditions.

CURRENT FICTION.

The Southerner: A Novel. Being the Autobiography of Nicholas Worth. New York: Doubleday, Page & Co.

The novel is hard to define, and this book may be one. We incline, however, to think it rather less than a novel, correctly defined, and we are quite sure that it is also a good deal more. To constitute it a novel, there are some more or less fictitious characters, a thin thread of a plot to hold it together, and an intermittent love-story. But it is also biography, since decidedly more than suggestions of many of the characters were got from real persons—some of them still living. It is likewise autobiography, and at times unusually frank autobiography at that, although, on the other hand, even in this department, the admixture of fiction is large. It is history—with a like qualification. It is a study in politics and sociology. And it is a pretty lively, though a trifle belated, tract for the times.

So far as it is fiction, its quality may be indicated by placing it about midway between Mr. Thomas Nelson Page's "Red Rock" and the lurid stories of the Rev. Thomas Dixon, jr. But it differs from both quite otherwise and more fundamentally than by coming in between. Mr. Page is a very pleasing and well-bred, Mr. Dixon a very coarse and violent, defender of the South's past and

present, of its traditions, and ways and point of view. The writer of this book is a critic and a would-be reformer and transformer. The feeling for the South which his work reveals is strong—possibly as strong as theirs—but the point of view and the animus are utterly different.

The animus, as well as the method—in so far as so nondescript a work can be said to have a method—is, we think, decidedly open to criticism. There is too much of the spirit of the combatant, and something, we fear, of the bitterness of unpicturesque repulses. That is what makes the putting of real people into the story so plainly questionable, particularly since the fictional form permits a disregard for such requirements of accuracy as an out-and-out biographer or historian would have to meet. This, taken with the anonymity of the work, may provoke enough resentment, and give a sufficient opening for violent retorts, to defeat whatever purpose of constructive criticism it has. It is not for common mortals to assume Dante's privilege with his enemies, whether living or dead.

Nevertheless, it is the animus, the steady and strong and at times passionate rebellion against what may be called the forces of delay in the South, against whatever and whoever may be holding it back and keeping it apart, that gives to the book its force. We should say that much of the true spirit of reform and progress, although mixed with other and less worthy heats, and although too little alleviated by reverence and appreciation, is here to be found. The principal character, a young Southerner, with a Northern education, sees much that is false and insincere in Southern civilization and manners, much that is anachronistic in Southern life, and is gradually drawn into a protagonism of common sense, candor, and progress. He comes to deplore and to hate and to fight cant and ultra-conservatism in religion, Bourbonism in politics, archaic aims and methods in education, and false sentimentalism in everything; and winds up his career by getting elected State superintendent of education on a fusion ticket—and then being counted out. His stanchest ally is "Professor Billy," of the State University, who, by persistency, shrewdness, good nature, and a gift for story-telling of the cross-roads variety, does succeed in reforming education at the bottom, and dies president of an industrial school for girls. A young woman with the old Southern sentimentality, busy about Confederate memorials, falls away from the hero to an Episcopal clergyman; a woman with his own vision and ideals takes her place. A Confederate colonel, with stilted eloquence, but a shrewd eye to the political value of hero-worship and negrophobia, is his arch-antagonist. The Republican machine, made up mainly of postmasters, plays its part—a good deal to the life. A Yankee college-mate makes some investments. A quiet younger brother takes up the industrial problem without leaving the old home, and solves it. Negroes come into the action. Hardly a type is neglected.

The best pages are those given over to vigorous talk about "the problem," and, perhaps, the best of these is that which declares it to be no problem at all, but a condition, capable of indefinite improvement, but not, in the nature of things, capable of any "solution" at all. Here are words in which few Southerners—and not so many Northerners as a few years ago—would concur:

> I care nothing for the negro merely because he is a negro. I care for him because he is a man—or a child. I prefer to think of the people in the Southern States as a people—white and black alike—living under certain conditions, which can be made very fortunate and prosperous conditions, rather than about any particular class or race of them. . . . In any proper scheme of education, there are no white men, no black men—only men.

On the contrary, the feeling that, however both the races may be changed by training and education, there are fundamental differences between them which can probably never be eradicated, and that they can never live together as if they were all of the same race, is probably quite as strong in the South to-day as it ever was, and in the North stronger than it has been since the civil war. This is, we think, but one of several instances in the book of a failure to sense correctly some of the problems with which it essays to deal. Its appeal is, of course, to public opinion, and the author evidently shares the inability of most radical reformers to see clearly the nature and workings of that mysterious force. In dealing with it, not one in a million seems to have Lincoln's gift. The book would doubtless do more good than harm in the South if it should be widely and candidly read there. It is much more likely, however, to get a wide reading, and a rather too serious acceptance, in the North.

While no real person is put bodily into the story, and no career quite as it happened, the real persons who suggested—and more than suggested—certain of the principal characters may be named with a good deal of confidence. The State is North Carolina. For "Professor Billy" one may read Prof. Charles D. McIver; for Col. Graham, of Graham's School, Col. Robert Bingham, of Bingham's School; for Senator Barker, Senator Matt. W. Ransom; for Col. Stringweather, Gen. W. R. Cox, with admixtures, perhaps, from Col. Spier Whitaker—two chairmen of the State Democratic Committee; for Capt. Bob Logan, Col. J. C. L. Harris; for Mr. Birdcastle, Mr. Birdsong, once State librarian; for the *Globe*, the Raleigh *Chronicle;* for the *White Man*, the Raleigh *News and Observer;* for the *Cotton Boll*, the *Progressive Farmer;* for "Brother Charles," Mr. Henry A. Page; for Nicholas Worth, hero and author, Mr. Walter H. Page. The list of recognitions and partial recognitions could be lengthened.

Old Rose and Silver. By Myrtle Reed. New York: G. P. Putnam's Sons.

The harmless necessary novel blooms again, and the voice of Myrtle Reed is heard in the land. Old heads nod happily over the old rose-leaf chapters; young muscles stretch and gladden at acrobatic episodes; the world that loves a lover turns the pages contentedly, knowing that all really true love runs at last smooth in the land of Myrtle Reed. The disciples of the Woman's Column feast on visions of old gold satin, deep green velvet, clinging chiffon, spangled net, and gems to match: all the costuming being done with nice regard to the soul, as well as to the eyes and complexion. For music lovers, a yearning melody is braided, motive-wise, into the story, and as often set down in real musical notation, arranged for two hands on the piano, name and address furnished in a note. For epigram-searchers, there is good hunting:

> Men keep best in a cool, dry atmosphere.
> Wisdom consists largely in a graceful acceptance of things that do not immediately concern us,—

a priceless saying!

So are many fed. But those who ask for the untidy or the unwholesome, find the cupboard bare.

A Castle of Dreams. By Netta Syrett. Chicago: A. C. McClurg & Co.

Stories of a pretty romantic flavor, having to do with young, innocent, and modest girls who chance also to be titled heiresses, are never a drug in the market. It is always interesting to see by what specific path they are to be brought to the desired haven of matrimony. Adventurers are to be avoided, calf-love is to be shunted aside with sisterly affection, the plottings of adored but mercenary parents are to be set agley, the rivalry of naughty ladies is to be triumphed over: no end of untowardnesses may threaten—in vain. The conventions of this type of fiction may as well be accepted as the conventions of polite comedy. They afford a perfectly trustworthy and irreproachable form of entertainment for people who do not care to let their literature worry them. The Lady Bridgit O'Shaughnessy of this tale (it is to be noted that a cook or a saint spells her name "Bridget," but a heroine "Brigit" or "Bridgit") conducts herself efficiently in the part assigned. She almost does more than that—almost proves herself

not a mere romantic heroine, but a delightful creature of flesh and blood. But something too much is required of her: she is a bit too clever, too efficient to be credible. A girl whose aristocratic blood empowers her (at the age of twenty-two) to shift in a half-hour from a colleen in short skirt and bare legs to a lady of fashion and form, a self-possessed and dominant hostess, is hardly of this world. She must be as the child Bridgit has fancied herself: a fairy-lady. She must in that character have been to London and seen the great Queen to some purpose, to have acquired this conquering way. However, she has it, and it suffices to bring her safe through a difficult situation without a tremor. What that situation is, with what special perils it is hedged about, by precisely what means the girl's force and cleverness serve her in the event, far be it from the commentator to specify. There you have the single fair excuse for the whole performance—unless it be in the quiet figure of "Standish," the one real and stable figure in this world of polite and presentable ghosts.

Lost Borders. By Mary Austin. New York: Harper & Bros.

It is difficult to believe that this collection of short stories is the work of a woman, so manly is its general tone. It is a tribute to our own Western desert that will rejoice those who have felt the magic of that place of sand and thorns, which to its lovers has no whit less of awful majesty than much-worded Sahara. The stories tell of primitive human experiences with an impressive simplicity—episodes of life lived in the face of the great waste, where so many of the apparent essentials, as civilization sees them, die out like the vegetation of the tilled fields, leaving only those hardy growths that are one with the soil. It is a wholesome book for city-dwellers in its largeness of understanding, the essence of which is finely embodied in the dedication with its Kiplingesque swing. Reading, we cannot but feel for the moment "the wind that wakes the morning on a thousand miles of sage."

TWO STUDIES IN LITERARY TYPES.

The Short Story in English. By Henry Seidel Canby. New York: Henry Holt & Co. $1.60 net.

The Autobiography. By Anna Robeson Burr. Boston: Houghton Mifflin Co. $2 net.

During the last ten years, all sorts of geniuses, critics, and professors have been discussing with marked animation the type, technique, and development of the short story. It was, therefore, inevitable in the heyday of literary history that some one should write the history of this ubiquitous parvenu. Let it be said at the outset that Professor Canby has performed with much tact and adroitness a pretty difficult task.

If the book was written to remove the curse of popularity from the study of the short story, it should be successful. It clothes the subject with a severity which will surprise the uninitiated. In his vivacious preface, Professor Canby admits that he runs the risk of "aggravating" the critic by overmuch of theory, interpretation, and technical discussion. The difficulty does not really lie there. It lies partly in the lack of illustrative material in the periods where it is most needed. It lies partly in the extreme condensation in other periods—the entire eighteenth century is disposed of in thirty pages. But it lies chiefly in a unified treatment of things fundamentally diverse. The short story is a singularly unsatisfactory type for the evolutionist. The Anglo-Saxon "Judith"—not mentioned in this treatise—is, by virtue of its brevity, poignancy, and singleness of effect, nearer to the "Cask of Amontillado" than almost any of the short stories of the sixteenth century. Again, short story telling *retrogresses* steadily from Chaucer to the nineteenth century. Though Professor Canby does not attempt to establish a continuous and orderly evolution, it is fairly obvious that he does approach all his material and measure its permanent importance with the purely literary standards established in the nineteenth and twentieth centuries. The constant forward reference, explicit or implicit, in his criticism of the early English, mediæval, and Elizabethan periods unifies the intention of his history, but subtracts from its interest. To write, with one eye fixed on Poe, of such a Protean and wholly indefinable type as "the short narrative in English," to write of all sorts of religious, moral, and sociological tracts—the *exempla* of the Anglo-Saxon homilists, the coney-catching pamphlets of Greene, the euphuistic conversations of Lyly, the "Oroonoko" of Mrs. Behn, the character sketches of Addison and Johnson—to write of all these things which never had the faintest intention of being short stories, with one eye fixed on the master of short stories, is to be rather dry and unedifying. The catholic historian of all types of short story in every period of English needs to forget Poe, and exercise the historical imagination. Professor Canby's historical sympathy and imagination are at times distinctly defective. Speaking of Alfred's apology for the heathen myths in Boethius, he says: "A hateful spirit this is, and the abomination of priggishness in the eyes of Chaucer." The remark does not indicate the most favorable temper in which to approach and interpret the narratives of a religious age.

Of its own well-defined kind or *genre* Professor Canby's book is a very good specimen—well-informed, critical, compact, severe, instructive. And yet when we read such an entirely unamusing account of the most purely amusing of literary forms, we cannot help recalling Goldsmith's observations made some time ago "Of Learning in Great Britain":

> To acquire a character for learning among the English at present, it is necessary to know much more than is either important or useful. It seems the spirit of the times for men here to exhaust their natural sagacity in exploring the intricacies of another man's thought; . . . others have carried on learning from that stage where the good sense of our ancestors have thought it too minute or too speculative to instruct or amuse. By the industry of such, the sciences, which in themselves are easy of access, affright the learner with the severity of their appearance. He sees them surrounded with speculation and subtlety, placed there by their professors, as if with a view of deterring his approach. Hence it happens, that the generality of readers fly from the scholar to the compiler, who offers them a more safe and speedy conveyance.

It is hardly just to compare Mrs. Burr's "The Autobiography" with Professor Canby's study in the short story, and yet the juxtaposition of the two books is suggestive—the defects of the two are opposite, their virtues are complementary. If "The Short Story in English"—to borrow Jonson's comment on the verses of Drummond—"smelled too much of the Schooles," the defects of "The Autobiography" arise largely from the boldness of the undisciplined student. The latter work is not, strictly speaking, a contribution to the history of literary types. It originated in a passion for knowing personalities through their own records, and in a desire to kindle a similar passion in other readers. As the circle of acquaintances widened, however, the author found certain laws of autobiographical writing revealing themselves under her eyes, and she began to suspect that her data had a genuine value for psychologists as well as for the layman. She accordingly made a number of investigations of which the results suggested the division of the book into chapters on such subjects as The Autobiographical Intention, History, The Three Great Archetypes, The Autobiographical Group, The Nervous Systems of the Past, Memory, Humour, etc.—and the list might have been extended almost indefinitely!

The field of the exploration is delightfully wide, ranging from Marcus Aurelius through most civilized countries—with special emphasis upon the material of France—to writers as recent as Edmund Gosse. Indeed, Mrs. Burr is so bold as to declare, "the reader may be sure that the omission of a work simply means that it contains no definite matter worth noting in the following

pages." When we turn to the list of two or three hundred "capital autobiographies" and find Charlotte Charke and Sir Egerton Brydges present, and Montaigne, Thomas Browne and Amiel absent, we question whether the statement was carefully weighed. The absolute ignoring of Montaigne is quite incomprehensible. In her chapter on "The Three Great Archetypes" the author says, "Augustin, Cardan, and later Rousseau and Mill—these are the autobiographers who have influenced others, and these are the great self-students." A little later she asserts that Cardan's "Book of His Own Life" was "as much read and as much imitated as the "Confessions" of Rousseau. Until we have seen some shadow of evidence to the contrary, we shall continue to believe that Montaigne was incomparably the greatest and most influential "self-student" before Rousseau, and also that the influence of Mill's "Autobiography" is not to be mentioned in the same day with the influence of Rousseau's "Confessions."

A reckless audacity of statement is the prime defect of the book. Christianity brought the subjective influence into literature: The "Meditations" of Antoninus were written after the birth of Christianity; therefore, the subjectivity of the "Meditations" was due to Christianity. Here is a specimen law of autobiographical production: "*The subjective autobiography groups itself about the great intellectual movements and changes of the world, and lessens or disappears in times of material change.*" Mrs. Burr does not give the dates of publication, but the birth and death dates of her authors; and whatever element of truth there may be in this law is not supported by her extremely vague and jaunty references to history. The "intellectual uprising," she declares, "produces Rousseau and his group; when action followed, the self-study disappeared." We should be inclined to state the matter thus: "Rousseau and his group produce the intellectual uprising; when they were dead, they ceased from self-study." A touch of the modern scientific condescension appears in her comment on "Richard" Burton. (There seems to be some confusion here with a modern bearer of the name; she always refers to him as "Richard.") Having spoken of two recent views of the nature of religious phenomena, she remarks:

> To the second, Richard Burton, in the "Anatomy of Melancholy," has *unconsciously* added the weight of his erudition, for the section on religious melancholy is packed, *though all unwittingly*, with examples to maintain the neuropathical opinion.

We suspect that Mrs. Burr has rather avoided the acquaintance of Burton in behalf of her favorite Alfieri. We suspect that if poor old "Richard" could rise from his grave, modern psychologists would not find him quite so "unconscious" or so "unwitting" as she would have it appear.

In spite of its defects, however, the book is remarkably entertaining. There is not a particle of doubt that Goldsmith would have preferred it to Professor Canby's "Short Story in English." It really accomplishes its most valuable purpose; it makes one desire to possess the entire list of "capital autobiographies"—and two or three besides. It almost makes one wish that Professor Canby and Mrs. Burr could collaborate in writing literary history.

Studies in Mystical Religion. By Rufus M. Jones. New York: The Macmillan Co. $3.50 net.

There are special difficulties in writing the history of Christian mysticism, or even in treating certain selected phases of it, as Professor Jones is careful to state was the intention of this work. The very question of selection, for instance, is a vital one, for it is decisive of the purpose of the work as a whole. It happens sometimes that the teaching of certain mystics is more influential than their personality; on the other hand, as in the case of St. Bernard, the man himself is much greater and more important than any part of the theological system he held. In the present volume there is no evidence of systematic choice. While much of it is well written, and while some chapters, notably the one on Dionysius, show originality, the result of a vigorous and independent study of a hard and wearisome author, there is not enough analytical power applied either to the theory or the different phenomena of mysticism. The plan of the work, too, is somewhat spoiled by the fact that it was prepared as the introduction to a history of English Quakerism. Some of the concluding chapters, though extremely interesting in themselves for the light they throw upon the obscurer developments of English religion during the periods of the civil wars and Commonwealth, are appropriately introduced to illustrate the environment in which Quakerism emerged, but are disproportionately long in a general appreciation of mysticism.

If Professor Jones had pursued his work with some definite object in view, he might well have confined his attention to the mysticism of unorthodoxy, to the influence of mystical tenets on the parties which opposed the Church during the mediæval period from the Paulicians to the Waldensians and Lollards. But his studies present a conglomeration of orthodox and unorthodox mysticism without any special attempt to discriminate or explain why certain mystics felt thoroughly at home in the communion of the Catholic Church, while others stubbornly resisted its authority. Viewed solely from the theoretical point of view, the mystical principles of the heretic and orthodox churchman might be closely allied, yet the orthodox mystic, as in the case of Thomas à Kempis, could speculate undisturbed while the heretic would be confined to the dungeon of the inquisition and subsequently burned. What possible place for a church organization of any kind would there be if Christians followed the standard of the "Imitatio"? Any ecclesiastical regimen must to mystics seem secondary; if treated seriously, their views are nothing more than religious anarchy. Why, therefore, was the Waldensian damned and the "Imitatio" given to the faithful as a standard devotional manual? On these doubtful and far-reaching problems which have both a place in the progress of human thought and can be seen to be of predominant importance in the study of society, little help can be got from this volume. Yet in a collection of essays these structural defects are not so serious as they would be in a systematic treatise, and there can be no question that Mr. Jones's sympathetic appreciation of mystical types of thought and his ability to present them succinctly and in popular form are certain to secure for his book the attention and recognition of many readers. They will find in him a stimulating guide, even when he fails to satisfy their deeper questionings.

Wisconsin Historical Commission: Original Papers. No. 1, A View of the Vicksburg Campaign, by William F. Vilas, Lieut.-Col. of Twenty-third Wisconsin Volunteers. No. 2, Capture and Escape, A Narrative of Army and Prison Life, by John Azor Kellogg, Colonel of the Sixth Wisconsin Volunteer Infantry and Brevet-Brigadier-General.

These handsome books introduce what will probably be a long series relating to the part played by Wisconsin in the civil war. They are well printed, but now and then the editing is careless. An officer of the distinction of Joseph E. Johnston ought not to appear as "Johnson"; and still worse is describing Gouverneur K. Warren as "George G." It is a good plan, no doubt, to fortify the series with a well-known name, but we think Mr. Vilas's paper is no very valuable contribution to history. It is a rather heavy account of the Vicksburg campaign, containing no new facts or judgments. There are serious omissions. Grierson's raid, an important incident of the campaign, tending as it did to confuse the Confederate leaders, is not mentioned, and a line or two only are given to the embarrassments caused by McClernand, the commander of the Thirteenth Corps. The campaign in general has often been more vividly and accu-

rately described, and there is an utter absence of the personal touch which a participant in so marvellous a drama might easily have imparted.

Of much greater value is the companion narrative of Col. Kellogg, who, as a captain, was captured on the skirmish-line in the Wilderness, May 5, 1864, undergoing imprisonment from which he finally escaped six months later. He traversed Virginia, the Carolinas, and Georgia at a time when exasperation was at its height: he endured the jail and the prison pen at their worst, barely got off alive while tunnelling to escape, leaped for liberty from a train at full speed only to be hunted down by bloodhounds, was incarcerated under Federal fire in Charleston, but at last through the aid of friendly negroes and mountain Unionists made his way to Sherman's lines just before the opening of the March to the Sea.

It is indeed a harrowing recital, and the heart of the reader bounds when at last after famine and nakedness the stout captain grasps once more the hands of comrades. But, turning to Rhodes, what shall we say of a declaration like the following, in the light of such a story? Summing up his account of the treatment of prisoners of war, he remarks: "All things considered, statistics show no reason why the North should reproach the South." (Vol. V, p. 508.) Rhodes is an historian always thorough, and his investigation here has been especially painstaking. The strait in which the South was placed could scarcely have been more severe. The constant and vigilant patrol of gunboats on the Mississippi cut off all help from the West, the blockade made impossible relief from the East. Grant and Sherman, each with a hundred thousand men and more, were at Richmond and Atlanta, the Eastern and Western citadels. Every effective man was needed at the front; food and clothes in vast supply must be provided. Though the slaves still caused the land to produce, the Federals had so far devastated even the interior that transportation was scarcely possible. While thus at disadvantage many thousands of their enemies fell into their hands to be cared for. The Richmond government, says Rhodes, did not intend inhumanity. The rations of prisoners were the same as those issued to soldiers; there was no thought of deliberate starvation or torture. But the captures came overwhelmingly. To guard the multitude a force was detailed, the minimum as regards number, the poorest as regards efficiency. It becomes explicable, such being the circumstances, why there should have been "a dead-line," why the prisoners should not have been furnished with tools to provide shelter for themselves; axes and saws in the hands of men desperately bent on escape would become formidable weapons. As to food it is confidently asserted to this day that at Andersonville, the ration of prisoner and guard remained always the same; but if not, naturally the armies would be first served, and, impaired as the transportation was, the prisoners might easily fall short.

Meantime, there prevailed a like congestion at the North, a corresponding crowd of Southern captives languishing at Fort Delaware, Elmira, and Johnson's Island. It may well be asked why could there not be an exchange? The answer is because Grant refused; he believed that whereas the Northern forces, after such an exchange, would be only feebly recruited, "the release of all the rebel prisoners in the North would insure Sherman's defeat and would compromise our safety here." So he wrote August 18, 1864, at City Point (War Records, serial number 120, page 607), persisting in a refusal to exchange which dated from the preceding April. "It is hard on our men held in Southern prisons not to exchange them," said Grant, "but it is humanity to those left in the ranks to fight our battles." By this stern insistence, setting at naught his own gentler nature, the piteous and universal clamor of Northern hearts, and the tears of a multitude of captives, he very possibly saved his cause. Here, at any rate, we find the highest proof he ever gave of his strength of character and the singleness of his devotion to his country.

Painful though Col. Kellogg's narrative may be, yet weighing duly the situation and the facts of human nature, it does not conflict with the conclusion of Rhodes, that the North has no reason to reproach the South for the treatment of its prisoners of war. Such horrors are an inevitable part of the thing we call war, as much so as the carnage of the battlefield. They always have occurred when the struggle becomes close and desperate; they will constantly recur until war shall be no more.

A Manual of Welsh Literature. By the Rev. J. C. Morrice, M.A. Bangor, England: Jarvis & Foster.

Mr. Morrice gives, in a book rather longer than the familiar primers of Jebb and Stopford Brooke, an outline of the literary history of Wales down to the end of the eighteenth century. While his work hardly bears comparison with those models of compact presentation of similar material, it is a useful introduction to the subject and a convenient handbook for reference. All the more important Welsh authors are passed in review, the significant facts of their lives noted, and their chief works named and characterized. Considerable space is given to quotations, which are frequently introduced to illustrate historical statements or expressions of critical judgment. In spite of a certain monotony in the plan, the book never becomes a mere dull catalogue of authors, for Mr. Morrice selects his material with skill and comments upon it with interest. But as a result of his choice of a method so largely biographical, general historical considerations—the analysis of intellectual movements and influences, or the study of literary *genres*—are rather neglected or obscured.

On the whole, the treatment of the early periods is less satisfactory than of the modern, perhaps because in Old Welsh literature some of the most immediate and fundamental questions of chronology and authorship are still unsettled. In the case of the bards traditionally assigned to the sixth century, so much is matter of controversy that the problem of the author of a brief history is especially difficult. Mr. Morrice has tried to treat the subject with due care; but cautious as his statements are, even to the point of vagueness, they go rather beyond what conservative scholars will be disposed to concede as regards the authenticity of the poems in question. The discussion of the "Mabinogion" (pages 29 ff.) is also decidedly inadequate. The possibility of a Gaelic element in the oldest stories and the explanation of its presence, if so regarded, are not dealt with at all. And in the case of the latest group of tales—"Owain," "Geraint," and "Peredur"—the question of French influence is dismissed (page 31) with a few general remarks about Geoffrey of Monmouth and the proximity of Normans and Britons, and without a single reference to the parallel romances by Chrestien de Troyes. Furthermore, the explanation of the title "Mabinogion," as a term of contempt, meaning "tales for the young" (page 32), surely needs some defence in view of the abandonment of this interpretation by most scholars in recent years. While Mr. Morrice could not properly enter upon extended argument about controverted matters, he ought to have taken pains to indicate his departures from prevailing opinion, and to have stated some reasons for his views.

With regard to the book as a whole, two general observations may be added, though they apply rather to the present state of knowledge on the subject than to any special delinquency on the part of Mr. Morrice. No one can read the manual without being impressed by the quantity of important Welsh writings which are not yet accessible in print; and it is clear that before anything like an adequate history of the literature can be written, a great deal of work must be done in the way of editing texts. It is equally plain that little more than a beginning has been made in the study of the relations of Welsh literature to that of the rest of Europe. Mr. Morrice, to be sure, does not take account of all that has been accomplished in this di-

rection, and his book is hardly a measure of the results thus far obtained. But it is true, in general, that Welsh literature has been treated too much as a thing apart; and there is an inviting field here for the application of the much-talked-of comparative method.

Mexican Trails: a Record of Three Years in Mexico, 1904-1907. By Stanton Davis Kirkham. New York: G. P. Putnam's Sons. $1.75 net.

Mr. Kirkham, already an author of experience in other fields, now gives a charming picture of Mexico. He does not attempt to instruct; the book is an impressionistic painting, full of the atmosphere and color of the real Mexico—the Mexico of the Indian trails. Not specializing in any one subject, he has looked at everything with seeing eyes: he is interested in the mining camps, the making of pottery and sugar, the flowers and insects; and he shows an intimate acquaintance with the birds which fly across his trail. Finally, in the scenery of mountain and desert, he finds continual delight, observing everything under the spell of Mexico's dramatic history.

Mr. Kirkham has traversed many miles of territory still untouched by modern civilization, and his pictures of Indian life are full of feeling and pathos, relieved by touches of humor. Among his many intimate descriptions of the native life, there is one of especial interest. It was only a chance encounter with a small Indian lad on the Atlacomulco Road, but Mr. Kirkham soon won the child's friendship, and it was not long before little five-year-old Juan, bent under a thirty-pound load of wood, was confiding to his new friend the all-important fact that he was on his way to market, two miles distant over a rough road, adding proudly that for his load of wood he hoped to earn three cents. To Mr. Kirkham this childish burden-bearer is representative of the unceasing patience and unrewarded toil of the race:

> Little Juan has helped to wear these ruts in the high-road. They are eloquent of many Juans, toddling bravely in their diminutive *guarachas;* striding later after the burros laden with loaf sugar from the hacienda, or making the pilgrimage over the mountain, staff in hand; tottering feebly at last to the market to chat with old cronies and to beg something to eat. Juan will inscribe the story of his life on these stones. He will wear them down a little, but they, in turn, will wear out his life.

A short and truthful picture of the national fiesta is given on page 115:

> The fiesta in Mexico is the legitimate offspring of the Aztec fair, and quite as much a matter of barter as religion. So now there be many who will sell a hen, later to hargain for a sombrero, presently to go upon their knees within the church yonder, candle in hand; lastly to lie by the roadside, overfull of pulque and oblivious of this world or the next.

The narrative is refreshingly free from statistics and chapters on the financial resources of the country and the political situation. As an artist is said to catch the expression of his model, so Mr. Kirkham has succeeded in portraying the individuality, the elusive spirit of Mexico. The book is attractively illustrated with twenty-four full-page reproductions of photographs.

The French Revolution: A Short History. By R. M. Johnston. New York: Henry Holt & Co. $1.25.

Speaking of the work of the historians of to-day in the field of the French Revolution, Professor Johnston says that the "trend of modern effort is to straighten out the details, but to avoid the large issues; to establish beyond question the precise shade of the color of Robespierre's breeches, but to give up as unattainable having any opinion whatever on the French Revolution as a whole." Most students will consider this a cavalier characterization of the recent literature on the subject. Declaring that the "main outlines of the Revolution, the proportion and relation of things, tend to become obscured under the accumulation of historical detail that is now proceeding," he therefore attempts "to disentangle" from this mass of material "the shape, the movement, the significance of this great historical cataclysm," and to judge freely the importance of its incidents.

How has he succeeded in his task? He has written a brief and animated account of the history of France from 1789 to 1799. But that he has disentangled anything that cannot be found already disentangled in many other compendiums, is not apparent. He treats almost exclusively the personal and the episodic in the Revolution. The careers and fate of important individuals, the struggles of parties and factions, are traced with a fulness out of proportion to their real significance. The treatment of the causes and the results of the great movement is slight and apparently incidental to the more spectacular aspects of the story. Professor Johnston devotes more space to Beaumarchais than to the remarkable changes in the civil and criminal laws of France, more to the Revolutionary calendar than to the Constitution of 1791. The extraordinary popular movement, which, all over France, followed the storming of the Bastille and which practically destroyed the feudal system, is merely characterized as "a regular Jacquerie." As a consequence, the night of August 4, which was simply its culmination and ratification, has nothing like its proper setting and is greatly over-emphasized.

As the author approaches the end of his volume after long descriptions of the factional struggles and the Revolutionary days, he says:

> Meanwhile unconsciously the great social revolution had become an established fact. In the short space of five years—but such years—social equality, freedom of opportunity, a new national attitude, a new national life had become ineradicable custom; the assemblies in their calmer moments had passed laws for educating and humanizing the French people.

If this great social revolution, which was, however, certainly not accomplished unconsciously, if this attainment of a new national life, the really important thing in the whole movement, had been described we should be content with shorter accounts of the Diamond Necklace, the flight to Varennes, and the quarrels of Hébert and Danton and Robespierre.

Frequently the precise information we desire seems about to be vouchsafed only to elude us. Thus on page 32 it is stated that the feudal taxes will be noticed later in connection with the session of August 4, but when we reach that point we find no description of them, but only a vivid account of an exciting meeting which decreed their abolition. It is the same in regard to the Constitution. On page 75 it is stated that it may be left for the present to be considered when it becomes operative. When that moment arrives, on page 125, less than four hundred words are given to it, fewer than are devoted to the conspiracy of Babœuf.

There are many evidences of carelessness in the construction of the book. It is stated on one page that the Assembly of Notables met in January, 1788, and on the next that it was dissolved on May 1, 1787. Neither date is correct. Nor did that assembly consist of one hundred and fifty members. The deputies did not declare themselves the National Assembly on June 14, but on June 17. The march of the women to Versailles is given on page 82 as occurring on October 5, on page 85 as occurring on October 6. The Constituent Assembly did not vote the exclusion of members from the ministry "at the end of November," 1789, but did vote it on November 7. The first session of the Convention was held on the day of Valmy, as apparently asserted on page 157, not on the day after as asserted on page 158. The 10th of Thermidor is wrongly given as the 29th of July, whereas four pages earlier the 8th of Thermidor is correctly given as the 26th. It is stated on page 229 that the Treaty of Basle was signed on April 5th, 1795, and on page 230 that it was *followed* by one with Holland, March 16th. Moreover, the Treaty of Basle certainly did not give the French Republic a free hand *south* of the Rhine. It is asserted on page 90 that "the greater part of French citizens" were exclud-

ed from the franchise under the Constitution of 1791. Aulard, on the other hand, estimates the number of active citizens at nearly 4,300,000 and of passive at about 3,000,000. The amount of *assignats* issued during the Revolution is exaggerated on page 252 more than three thousand-fold. There is a jumble of incorrect French on page 265. Unfortunately, this does not exhaust the list of errors.

In the opening chapter of his book Professor Johnston criticises Carlyle as failing "to resist the high lights of his subject," Taine as "hasty" in much of his erudition, and Sorel as "incorrect in details."

Notes.

"Dorian Days" is the title chosen for the new volume of poems by Justice Wendell P. Stafford of the Supreme Court of the District of Columbia, announced by the Macmillan Co.

The Chaucer Society will soon publish an important short paper by Professor Skeat, entitled "The Eight-Text Edition of the Canterbury Tales, with especial reference to the Harleian MS. 7334."

A former professor at the University of Liverpool, W. H. Woodward, is preparing for publication a biography of Cæsar Borgia, based upon all the published documents and the results of his own researches in the Archivio Segreto of the Vatican, and in other libraries.

Henry Frowde will soon issue the first volume of Oxford Studies in Social and Legal History, edited by Professor Vinogradoff. Included are "English Monasteries on the Eve of Dissolution," by Prof. A. Savine, and "Patronage in the Later Empire," by F. de Zulueta.

The first volume of the collected edition of the works of Fiona Macleod (William Sharp) will soon be issued through Duffield & Co. His writings under his long baffling pseudonym from 1894 to 1905 are here first presented in a complete edition with certain revisions and excisions which have been carefully made by Mrs. Sharp, as editor, according to the wishes and instructions left with her.

Barbey d'Aurevilly is to be honored this week in the erection of two monuments: Rodin's at his birthplace, Saint-Sauveur-le-Vicomte; that of Mlle. Lucienne Delambre in the Montparnasse cemetery, Paris.

Provost Charles Custis Harrison of the University of Pennsylvania succeeds Dr. C. W. Eliot in the chairmanship of the board of trustees of the Carnegie Foundation for the Advancement of Teaching.

The Open Court Company publishes an English translation of Spinoza's "Short Treatise on God, Man, and Human Welfare," rendered from the Dutch edition by Lydia Gillingham Robinson. The chapter on Spinoza from Dr. Albert Schwegler's History of Philosophy is reprinted as an introduction.

The interest in the life of Margaret Gordon, Lady Bannerman, is altogether too slight to warrant the publication of a volume which, though containing only 169 pages of text, is made bulky by thick paper and expensive by the London tradition. The title of the book, "Carlyle's First Love" (John Lane Co.), will explain, if it does not quite justify the purpose of the author, Raymond Clare Archibald. As a matter of fact, he has extremely little to say about Carlyle, and that little neither very new nor interesting. Those only who are concerned in certain Scotch genealogies will find the book valuable. One reflection it raises. Now that virtually the whole mass of Carlyle material has been published, and all the facts of his career are easily available, why does not some ambitious scholar undertake a thorough revision of Froude's biography? By the correction of dates and quoted texts, by an occasional note or modification of the text where Froude goes too far astray in his interpretation of events, that much maligned life might be restored to its high place. It is scarcely within probability that any one will ever *de novo* write a life that will compare with Froude's in general interest or even, in certain aspects, come as close as Froude's to the real man Carlyle. The great need is to purge it of its errors, and that for the most part could be easily done.

When Carlyle, in 1843, published "Past and Present," the exaggerated cult of optimism which we have to-day was not, as yet, a literary limitation. Carlyle was permitted to write, in his Proem, that "England is dying of inanition," without being ruled out of court. And now one of our latter-day prophets, Gilbert Keith Chesterton, writes an introduction for Carlyle's book, which is published in the World's Classics, by Henry Frowde. Mr. Chesterton is not at his best in this introductory essay. "All skepticism is like seasickness," he writes; and we do not relish the figure. Nor do we admire its expansion: "If you cannot enjoy the universe it is better to throw it up." Mr. Chesterton too often parodies himself in his occasional essays: and this kind of parody is the least admirable of all. When, however, he protests against the everyday use of the words "reactionary" and "progressive" as, inevitably, terms respectively of offence and of praise, we are more sympathetic. "Progress," he writes, "happens, in short, whenever men can endure one tendency for a long time. And reaction happens whenever some particular man can endure it no longer. A progressive is always a conservative; he conserves the direction of progress. A reactionary is always a rebel." There speaks Chesterton in his better vein. And his reactionary rebel is, of course, Carlyle. It is good to have "Past and Present" in this new and excellent reprint.

We are glad to see a good edition from the Clarendon Press, of Hobbes's "Leviathan," one of the great clarifying books, both for its style and its ideas. Nor does such praise necessarily imply an acceptance of Hobbes's theories, or of what would be their equivalent to-day. "It is idle," says W. G. Pogson Smith, in his introductory essay, "to qualify such a political philosophy: it is rotten at the core. It is valueless, save in so far as it stimulates to refutation. We may be content to leave it as a precious privilege to the lawyers, who need definitions, and have no concern with morality. And yet, no thinker on politics has ever probed its fundamental conceptions more thoroughly; and I say advisedly, if you would think clearly of rights and duties, sovereignty and law, you must begin with the criticism of Hobbes." Mr. Pogson Smith, whose recent death was much deplored at Oxford, shows that he has himself gone deeply into the analysis, not only of Hobbes, but of the political philosophy generally of that age and the next. Some of his remarks are penetrating, as when he speaks of Rousseau's survey of human nature as often strangely and suspiciously resembling that of Hobbes; but he fails, nevertheless, to give us the appreciation of Hobbism still so much needed. His comparison with Rousseau might have set him on the way, but he goes aside to consider subsidiary matters. What we desire is a thorough study of the element of social illusion, which, to Hobbes in the form of kingship, and to Rousseau in the form of the *volonté générale* (and, we might add, to Plato, and other philosophers in a variety of forms), seemed the necessary basis of government. In this, Hobbes and Rousseau agree; they differ in their respective views of human nature as essentially evil and egotistic or good and sympathetic. A proper study of Hobbes must, in the end, be psychological, rather than legal, and such a study Mr. Pogson Smith, with all his knowledge, does not give us.

Readers whose interest in the poet has been revived by his death will find in "Swinburne's Dramas," selected by Arthur Beatty (Thomas Y. Crowell & Co.), an attractive one-volume edition of "Atalanta in Calydon." "Erectheus," and "Mary Stuart." The editor has supplied judicious notes explaining classical obscurities, and an introduction apparently not dictated by intemperate enthusiasm. In placing Swinburne beside Matthew Arnold as an interpreter of the results of "The Origin of Species," he touches upon an important subject demanding rather fuller elucidation than he has been able to accord. In praising the rhythmical splendors of the choruses in the Greek plays he emphasizes a poetical virtue felt in varying degrees in the non-dramatic work as well. If this re-offering of the dramas is to be of service in strengthening Swinburne's hold upon the public, it should invite reëxamination of what is purely dramatic in the poet's contribution. It will never persuade any one that Swinburne had mastered the art of Webster—"Mary Stuart," though it contains much virile verse, is merely the best in a trilogy of the most formidably undramatic plays in the English language. It should, however, allure some of the sad young people who go about, intoxicated with mortality, chanting lines of "Hesperia" and "The Garden of Proserpine"—

> There star nor sun shall waken,
> Nor any change of light——

it should allure those hot-blooded lovers of death into the sobering shadows of the Greek tragic spirit. There is in "Atalanta" and in "Erectheus" not an intellectual, but an emotional depth, a sense of pity and terror, which seems constantly to escape the facile apprehension of critics. It is easy to declare that the abandoned volubility of these plays, especially the earlier, is Swinburnian and not Aeschylean or Sophoclean. On the other hand, it is easy to point with

Burlingame Public Library

delight to metrical or pictorial triumphs—the slaying of the boar, the choruses, the sacrifice of Chthonia. To grasp their variety and respond vitally to their unity is another matter. For full participation in the terrific ideas of life, death, and destiny involved in the tragedy of Meleager, or in the magnificent conception of civic duty symbolized by Chthonia, demands a rebirth in the antique world, demands a reader divested, collected, hearkening like the stricken Œdipus for the voice of the God. It is a task for a still, long, sunlit morning or for the privacy of a stormy midnight; and it is worth while.

The authorities of the Jamaica Institute are about to follow up their publication of "Bibliographia Jamaicensis" by the issue of a Bibliography of the West Indies, omitting Jamaica. The work includes all islands in, and lands adjoining, the Caribbean Sea. It is arranged chronologically under each country, and geographically round the Caribbean, beginning at Barbados and ending with St. Vincent. It includes foreign countries and colonies, as well as British possessions, and has a full index. The volume has been prepared by the secretary of the institute, Frank Cundall, who is the author of the "Bibliographia Jamaicensis" (1902), and its supplement (1908). Mr. Cundall has done much to draw attention to Jamaica and other British West India colonies by his writings, which include: "Studies in Jamaica History"; "Biographical Annals of Jamaica"; "Jamaica in 1905" (a handbook of information for intending settlers and visitors); "Brief Guide to an Exhibition of Maps of the Sixteenth Century, illustrative of the Discovery of America," and "Jamaica Place Names." He is collaborating with Dr. Izett Anderson in the preparation of a collection of Jamaica proverbs.

The first volume of "The Correspondence of Jonathan Worth," edited for the North Carolina Historical Commission by Prof. J. G. de Roulhac Hamilton of the University of North Carolina, has just appeared. The chief interest of the papers is in the light which they throw on political conditions in that State during the period of civil war and reconstruction. Worth, who entered public life early as a Whig, was one of the most determined opponents of secession, and in 1861 opposed the calling of a convention to consider Federal relations, on the ground that such action by the Legislature was unconstitutional. Like so many of his associates, however, he "went with his State," and while condemning both the war and the conduct of it, was active in urging enlistment and labored faithfully for the success of the cause. His well-known Union sympathies earned him bitter opposition, but in 1862 he was appointed salt commissioner for his country, and presently became State treasurer, in which difficult office he achieved notable success. In August, 1863, he was sure that peace was at hand, and that the masses were for it "on any terms"; but his loyalty to his State forbade him to take any part in the peace movements of 1863 and 1864. When W. W. Holden became provisional Governor, Worth was made provisional treasurer, and later State agent, an office which required him to collect the scattered property of the State which had been seized by Federal officials or stolen outright by individuals. On the downfall of the Holden administration, at the end of 1865, he became Governor, and had the good fortune to commend himself to Gen. Sickles, the military commander of the district; but with Sickles's successor, Canby, whose administration took little account of either the prejudices or rights of the people, he was at sword's points, though he succeeded in preventing the appointment of Albion W. Tourgee as a judge of one of the State courts. In 1868 he was removed from office "to facilitate the process of restoration," and lived in retirement until his death the following year. Aside from their political interest, the letters afford some information regarding prices and the conditions of business during the war. The few references to the negro are always kindly, but at the end of the struggle Worth was apparently hopeless of finding a satisfactory race adjustment; for he writes to his brother in September, 1865, that "it would be better for you and for everybody else who is a white man to leave North Carolina," since "we who were born here will never get along with the free negroes, especially while the fools and demagogues of the North insist they must be our equals."

As an intimate picture of conditions in the Far West during the last period of its epic history, the period from 1871 to 1883, when even the officers and soldiers of the United States army had to reckon with Indians and desperadoes, we find Mrs. Frances M. A. Roe's "Army Letters from an Officer's Wife" (D. Appleton & Company) more than ordinarily interesting. It is not a pretentious book; the author assures us that "all flowery descriptions have been omitted," but in spite of the lack of such floral ornamentation the wild land between the Mississippi and the Pacific, with its perils and fascinations, is very vividly described. Mrs. Roe was with her husband during sixteen years of service in what was then Indian Territory, Colorado Territory, Montana Territory, and Idaho Territory; and her account of the country and of life in camp bears the stamp of absolute veracity. It is an interesting experiment to recall one's early impressions of Deadwood Dick and his compeers and see how far they square with the realities as described by one who was in the magic land just about when we were reading of it in the dime novels. Mrs. Roe participated in the running down of Indians and was, on several occasions, nearly captured by them. One gathers that, in spite of such recreation as buffalo and antelope hunting afforded, supplemented by dancing and theatricals, the life was an exceedingly hard one. The charm of a more than usually attractive personality is felt throughout the book, whether it is a question of the domestic and social life in officers' circles, hunting parties, or occasional encounters with desperate and gentlemanly outlaws. Mrs. Roe's sojourn beyond the Mississippi was broken by a short stay in the South. At Vicksburg in 1877 she spent three weeks in the house of Jefferson Davis, whom she sketches with a good deal of sincere sympathy.

Calderon, indifferent to the future fortunes of his dramas, gave forth no personally supervised editions of them, apart from a few *autos* or religious plays. After his death, his Gongoristic disciple, Vera Tassis, published the most complete collection of them, and this, in the opinion of so important a critic as Menéndez y Pelayo, shows probable traces of alterations at the hands of the editor, who is not unduly suspected of having introduced purple patches into some of the best works for the purpose of catching the depraved taste of the end of the seventeenth century. Vera Tassis's edition is, unfortunately, the chief basis of the modern editions of Calderon's plays. In the case, however, of the "Vida Es Sueño" we have also the edition, published (with several other Pieces) by the poet's brother José in 1636, and then, surreptitiously, in the same year, at Saragossa. Making use of the two 1636 prints and of that by Vera Tassis (1685), Dr. Buchanan has prepared the present welcome edition. ("La Vida es Sueño": Comedia famosa de D. Pedro Calderon de la Barca, 1636, edited by M. A. Buchanan. Vol. I. University of Toronto Library). He has undoubtedly improved upon Keil, Hartzenbusch, MacColl, Krenkel, Menéndez y Pelayo and others, who, in the course of the nineteenth century, have sought to present the drama in critical form. In the choice of variants among the readings of his three texts Dr. Buchanan has shown good judgment, and we shall look forward with interest to the appearance of the second volume, in which he is to discuss the previous history of the theme of the play and its general literary importance.

The quarto "Odyssey" printed at the Oxford University Press in the type designed by Robert Proctor will be treasured by all who love what is rare and beautiful. The type itself, as Mr. Proctor has explained, "is based on the celebrated Alcala font of 1514. This was cut by order of Cardinal Ximenes for use in the New Testament of the great Complutensian polyglot Bible, and is usually supposed, though there is no direct evidence, to owe its form to an ancient manuscript which was sent to Spain by Leo X from the Vatican library to serve as the basis for the text of the New Testament in that work." Whatever the origin, it is singularly rich in curves, and, after the first look of strangeness has passed away, easy to read. The Alcala type had only one capital letter, a H, and for the rest Mr. Proctor was obliged to call on his own inventive ingenuity. He has been highly successful here, with the exception, possibly, of the epsilon and omega, which would have better matched the other capitals, if they had been more angular. But this is a small matter, and we give our opinion here with diffidence. The paper is identical in manufacture with that used by William Morris for his Kelmscott Press. The text is that of Dr. D. B. Monro, issued at Oxford, in 1901. The edition is limited to 225 copies, and the price is four guineas. Such a book is distinctly and frankly a luxury, but why should not scholarship have its own magnificent rewards?

In 1907 the British Academy accepted a gift of £10,000, bestowed in memory of Leopold Schweich of Paris, as the foundation of the "Schweich Trust," to be devoted "to the furtherance of research in the archæology, art, history, language, and literature of ancient civilization with reference to biblical study." A portion of the income has been appropriated for annual lectures of general interest on the themes

indicated in the foundation. The first addresses were made by Canon S. R. Driver on "Modern Research as Illustrating the Bible" (Henry Frowde). They sketch briefly the progress made in biblical archæology in the nineteenth century, and, more particularly, describe the information which has been secured recently on the early history of Palestine from the inscriptions and monuments brought to light from excavations. Excellent illustrations accompany the text.

The principles of the "New Thought" movement in American religious circles are set forth in a series of tractates by the Rev. J. Herman Randall, pastor of the Mount Morris Baptist Church of New York. Some of the titles are: "The Real God," "The Subconscious Mind," "The Power of Suggestion," "The Rebirth of Religion." (H. M. Caldwell Co.)

Henry Frank's "Modern Light on Immortality" (Sherman, French & Co.) surveys all history, all biology, and all philosophy in its quest for evidence concerning the problem of life after death. Since the author has no first-hand and little accurate knowledge in any of these provinces and manifests no sense for the distinction between guessing and reasoning, his book, which is written in pretentious and ungrammatical English, has only the merit of earnestness and of independence of traditional opinions.

The Rev. M. W. Paterson of Trinity College, Oxford, makes no claim of original research for his "History of the Church of England" (Longmans), yet it is an uncommonly good summary. The author's point of view is that of a moderate Anglican, and the treatment is characterized throughout by fairness and self-restraint, even while party spirit still runs so high in the English Church that the books dealing with its history—and they are legion—are all too frequently partisan in method. The account of the ecclesiastical revolution under Henry VIII and of the critical generations that followed is, on the whole, admirable. The eighteenth century, on the other hand, fares very badly. Nothing could be more unsatisfactory than the brief reference to the deistic movement, and nothing further from the truth than the notion, traditional among English churchmen, that Bishop Butler's "Analogy" gave deism its death blow. Deism succumbed to quite other forces, and hardly an important book of the eighteenth century had less influence in its own day than the "Analogy." The nineteenth century, like the eighteenth, receives relatively too little space. The account of the Oxford Movement is fair and sane, but other matters get scant attention. Taken as a whole, however, the book is one of the best, as it is one of the most readable, of the many brief histories of the English Church.

A bibliography of the hymns of Paul Gerhardt and of the editions of his poems and sermons, the biographies, monographs, popular essays, and addresses, and the musical and dramatic observances occasioned by the celebration of the three hundredth anniversary of his birth in 1907, has been prepared by a warm admirer of Gerhardt, Rudolf Eckart (Pritzwalk: A. Tienken).

The work of Prof. Karl Beth of the Protestant theological faculty of the University of Vienna, entitled "Der Entwicklungsgedanke und das Christentum" (Berlin: Edwin Runge), is a sign of the times, as it is an earnestly meant and skilfully undertaken attempt to reach an understanding between the positive principles of Biblical Christianity and the development idea. In the second part of the book Beth shows in detail the influence of this idea on such prominent problems of theology as Theodicy, Sin, the Original State of Man, Revelation, Jesus Christ, and Immortality. Beth concedes that, in view of what the modern development philosophy has accomplished, it is necessary even for orthodox theological thought to make concessions that would have shocked older generations.

The death is announced of William Richard Morfill, professor of Slavonic languages at Oxford University and curator of the Taylor Institution.

From Paris is announced the death of the classical scholar, Henri Weil, who was born at Frankfort (1818) and educated at Heidelberg, but became a naturalized Frenchman (1848), and held several academic appointments in the Université de France. In 1882 he was elected to the Académie des Inscriptions, where he succeeded Delaurier. He was the editor of numerous texts and of several works of scholarship, among them "Théorie générale de l'accentuation latine" (in collaboration with Benlœw), 1855; "Etudes sur le drame antique" and "Etudes sur l'antiquité grecque," 1900; "Etudes de Littérature et de rhythmique grecques," 1902.

John Bannister Tahb, a professor at St. Charles's College, Ellicott City, Md., and, since 1884, a priest of the Roman Catholic church, died on November 19, in his sixty-fifth year. He was born in Amelia County, Virginia, and served during the civil war in the Southern navy; becoming in 1864 a prisoner of war. Though his verses have appeared even very recently in the magazines, Father Tahb was some months ago stricken with total blindness. His published work includes "Poems," "Lyrics," "An Octave to Mary," "Rules of English Grammar," "Poems Grave and Gay," "Two Lyrics," and "Quips and Quiddits."

William M. Laffan, publisher of the New York *Sun* for the last twenty-five years, died November 19 at his home in Lawrence, L. I. He was born in Dublin, Ireland, January 22, 1848. His education was received at Dublin University. Later he studied at St. Cecilia's School of Medicine. On coming to this country, he entered journalism, and in 1870 became managing editor of the San Francisco *Bulletin*. Later he became editor and part owner of the Baltimore *Bulletin*. In 1877 he joined the *Sun* as a general writer, being elected publisher in 1884. Three years later he founded the *Evening Sun*. In 1900 he purchased the interests of the Charles A. Dana estate. An abiding interest, other than that of journalism, was that which he always had in the fine arts. During an early visit to the far East, he began those studies of Chinese ceramics which he pursued through his life, the chief monument of which is his catalogue of the Morgan-Garland collection in the Metropolitan Museum. Upon the reorganization of the Metropolitan Museum, after the death of Gen. Cesnola, he was elected a trustee, and was ever an influential member of the committee on acquisitions. He produced not only a considerable number of essays for newspaper publication, but also a volume entitled "American Wood Engravers," 1883; and he edited several monographs and catalogues.

Richard Watson Gilder, editor of the *Century Magazine* since its organization in 1881, died November 18 in New York city. He was born in Bordentown, N. J., February 8, 1844. His father was a Methodist clergyman, from whom the author inherited, perhaps, a part of his creative impulse. Owing to his frailness, he was educated at home; but when the Northern cause seemed threatened in the campaign of 1863, his state of health did not deter him from enlisting in Landis's Philadelphia Battery, and he was under fire in the defence of Carlisle. In 1865 he entered newspaper journalism. Five years later he joined the staff of *Hours at Home*, a monthly magazine issued by the Scribners. It was in the same year that *Scribner's Monthly Magazine* was started under the leadership of Dr. J. G. Holland. Dr. Holland made Mr. Gilder managing editor of the new monthly. On the death of Dr. Holland, the managing editor became editor-in-chief; and when, in 1881, the magazine was purchased by Roswell Smith, and the name changed to the *Century*, he continued the editorship of the magazine under its new name. It is as poet, however, rather than as editor, that Mr. Gilder attained the greatest reputation. His first collection of verses, "The New Day," was published in 1875; "Five Books of Song" came out in 1894, and included earlier publications; "In Palestine" was issued four years later; "Poems and Inscriptions" (1901), and "A Christmas Wreath" (1903) and "A Book of Music" (1906), both anthologies, followed. Other books were "For the Country," "Fire Divine," and "In Helena's Garden." But Mr. Gilder was more than editor and man of letters. His enthusiasms included an ever active sense of civic responsibility, and he was an unflagging worker for the city beautiful and the city righteous. As president of the Tenement House Commission of 1894, he achieved invaluable results, and his was one of the voices raised, not in vain, against the abandonment of St. John's Chapel in Varick Street. He was one of the founders of the Society of American Artists and of the Authors' Club, and will be remembered as one of the members of a circle of literary men of whom William Dean Howells and Mark Twain alone survive.

Science.

Œcology of Plants; an Introduction to the Study of Plant-Communities. By Eug. Warming, Ph.D., professor of botany in the University of Copenhagen. New York: Henry Frowde. $2.90.

To some readers, the name of the branch of botany here treated will, perhaps, be new. It is that division of the science which attempts to answer all possible questions in regard to the mani-

fold relations of plants to their surroundings. It touches, therefore, upon agriculture, horticulture, forestry, and economic botany, and makes use of the methods of morphology, physiology, and taxonomy. In fine, it leaves untouched very few interesting topics in the applied biology of plants.

Professor Warming is a pioneer in this attractive field, and is recognized as its leading authority. His previous works on the subject have obtained wide circulation by their clearness and thoroughness, and have exerted a profound influence. It is, therefore, with great pleasure that botanists receive this volume, which is substantially new in all respects. The English publishers secured the services of two eminent botanists to prepare this edition, and they have had a great advantage over those who have hitherto made translations of scientific works. Professor Warming took the pains to prepare for these two botanists, who may be fairly called his English collaborators, fresh manuscript, and hence this volume differs widely from ordinary translations. He was assisted in the preparation of the work by Dr. Vahl, his associate, and he has been aided throughout by the editorial skill of Professor Groom and Professor Balfour.

Like all new branches of science, œcology has a multiplicity of unfamiliar terms, but the occurrence of these in great numbers in Warming's book must not discourage the general reader, who will find that there is hardly a problem presented which does not have its captivating aspects. Plant-œcology clearly recognizes the fact that every plant, in its struggle for existence, must be in harmony with its surroundings, or must disappear. When, therefore, we have before us a small patch of ground, with established vegetation, we are forced to admit that these competing plants are the survivors in a long fight, which has ended in a truce. If we compare the plants in one limited locality with those which have been peacefully growing together for a long while in another place, we see at once the differences which separate plant-communities. And this brings us face to face with the difficult and absorbingly interesting questions, why the species congregate to form plant-communities, why these have a characteristic physiognomy, and why they are distinctly localized. The "growth-form" of a plant, as it is called, is the external and internal structure, which has developed in complete harmony with the environment. Here we meet the first of the newer technical terms, namely *epharmony* of species. These epharmonic growth-forms are the units in œcology. Leaving out of view the plants which are dependent on other plants for nutrition or for mechanical support, and likewise those which are aquatic, there remains a vast group of autonomous plants, which are the common species all around us. This immense group has been divided and subdivided skilfully by Warming into minute classes, which have definite characteristics of structure fitting them for specific homes. It is this part of the subject which the general reader can easily strip of all embarrassing technicalities and interpret in terms of the familiar plants around his dwelling-place. Every bit of dry soil assumes a new interest as we look upon it, with its desert vegetation, and every swamp lying in the hot sun becomes a miniature jungle. It is by no means necessary to visit the tropics to find plants worthy of study as valiant fighters against great odds. In the tropics, plants have the climate which is best adapted to the most vigorous growth, but the struggle comes chiefly between the contesting kindred and the intruding strangers. Hence a tropical jungle has no fight against climate, whereas, in a tangled, wet thicket in our so-called temperate climate, plants must contend with untoward climatic influences, with sudden frost, and most unwelcome thawing. Methods of protection against these perils, and the range of injury are among the objects of study in plant-œcology. In short, the œcologist is the historian of an unending battle, and, like the historians of human warfare, he must take precautions against misinterpreting the signs of advance and retreat.

We can heartily recommend this volume to all who are at all interested in the activities of living beings.

The American Anthropological Association and the American Folk-Lore Society will meet in affiliation with Section H of the American Association for the Advancement of Science in Boston, December 27, 1909, to January 1, 1910.

The Third International Congress to discuss the education of children at home will be held in August, 1910, under the patronage of the Belgian government, in connection with the Universal Exposition at Brussels. The Congress will consist of five sections, for the study of children, of child-education, of abnormal children, of miscellaneous subjects related to childhood, and of documentation, respectively. Americans wishing to participate in its discussions, or to further its work by becoming members, should correspond with the secretary of the American committee, Prof. W. C. Bagley, Urbana, Illinois.

English writers are awakening to the importance of a scientific study of afforestation. An elaborate volume on this subject is announced by T. Fisher Unwin in Percival Trentham Maw's "Practice of Forestry." The writer was formerly professor at the Cirencester Agricultural College.

"Mendelism," by R. C. Punnett (New York: Wilshire Book Co.), is a work which deserves a better setting than the poorly printed pages and the blurred diagrams of this American edition. The whole treatise is of small size, and comprises only three distinct papers, together with a short but interesting preface by the American editor. The first essay gives in a limited space a clear account of Mendel's experiments and inferences; the second applies the so-called principles to practical improvement of organisms, and the last essay is controversial. The second of these papers ("Applied Heredity") is reprinted from *Harper's Monthly* for December, 1908, and is doubtless remembered by many readers, because of its attractive account of Professor Biffin's successful attempts to improve cereal grains in England.

Drama.

JOHN GALSWORTHY'S "STRIFE."

The production of John Galsworthy's "Strife" is the most satisfactory achievement of the New Theatre up to the present time. It is good in itself and an earnest of better things to come. The play, in comparison with the great bulk of contemporaneous stage shows, is a notable piece of dramatic work. It deals with a subject of vital and present interest, it is full of vivid incident and of characterizations which are veritable transcripts from actual life. But it is not a great play, because it is founded upon insufficient premises, is specious and illustrative rather than logical in its development, and because it ends inconclusively, so far as the main problem is concerned, or, at all events, in a moral which is by no means of universal application. The action covers the last six hours of a strike in some tinplate mills, which has been in progress for many months, to the great loss of the employing company and the direst suffering on the part of the workers and their families. The directors, on the one hand, save their president, John Anthony—an indomitable old fighter—and the men, on the other—with the exception of their fanatical leader, David Roberts—are ready to accept a certain compromise, but neither chieftain will yield by a hair's breadth. At last, when the credit of the company has been shaken and ruin is impending, and when Roberts's wife has died of starvation, the more timid directors overrule their chairman, while the men desert their champion, and the original compromise, which would have obviated all the loss and suffering, is adopted. Both the protagonists are discredited and broken, and the savage struggle has been wholly fruitless. "That," says the union delegate as the curtain falls, "is where the fun comes in."

The implication is that all strikes, with their deplorable accompaniments, might be avoided by mutual concessions. That is true. It is also a platitude. But it does not follow, by any means, that a compromise must necessarily be the wisest, or even the most humane, policy. A concession, for instance, that would spell financial ruin

in the near future, would not greatly benefit those who extorted or those who granted it. This is the argument used by old John Anthony and no attempt is made to refute it. This is the essential weakness of Mr. Galsworthy's play, that it generalizes unjustifiably from a particular instance. As a demonstration of familiar and conceded evils, it is picturesque, forcible, and truthful, but it suggests no practical solution of the problem which it proposes. It simply arrays antagonistic facts and figures without any effort to establish a balance between them. But his representation of the conditions which he has selected is admirable. His directors are all live men, most cleverly and consistently differentiated. Anthony and Roberts, bold in contrast, are absolutely veracious types. His workmen and their women are sketched with equal felicity and with rare power of observation. His dialogue, too, is singularly appropriate to each speaker, simple, significant, forcible, and unaffected. He knows how to be realistic, without being vulgar or trivial. And the convincing way in which he was interpreted by the New Theatre company is a most hopeful indication of its future capacity.

Louis Calvert, a little deficient, perhaps, in techiness and choler—in sheer brutal domination—furnished a finished and striking study of narrow but reasoned obstinacy, as President Anthony, while Albert Bruning, an actor of great ability, contributed a really remarkable embodiment of the ascetic, fanatically radical Roberts. His impersonation thrilled with fiery zeal. Another notable characterization was the life-like Welshman of Ben Johnson, with its humorous admixture of piety and prudence. Almost equally good was the passionate acting of Miss Thais Lawton as his daughter, Madge, maddened by a sense of needless misery. Both Mr. Gottschalk and Mr. McVay, the one as a fussy, egoistic and timid. the other as a dull, lethargic, utterly selfish director, acted with humorous veracity, while Mr. Anson, as the younger and more sympathetic Anthony, played with distinction and feeling. The stage setting and management—especially of a mob scene—were admirable. In fact, the whole achievement was of a high order of merit, though a clear mistake was made in shifting the locality of the piece from England to this country. Several of the chief personages are too essentially British to harmonize with their American environment.

A dramatization by Philip Littell of W. J. Locke's "Septimus," which was tried in the Hackett Theatre on Monday evening, did not prove very successful. The story, not easily credible in its original form, seemed still less plausible and much less pleasant when reduced, without much dexterity, to its bare incidents. George Arliss, a dry and mannered but humorous and skilful comedian, succeeded in reproducing the surface characteristics of Septimus with much cleverness, but failed to suggest the finer intellectual and moral qualities which distinguish him from the common brood of eccentric simpletons. He excited plentiful laughter, and the delicacy of his technical execution commanded admiration, hut the true soul of the part eluded him altogether. With Septimus mainly an excuse for merriment, the production, of course, had small dramatic or literary importance.

Recruits for the New Theatre company in New York city include Miss Annie Russell, last seen in "The Stronger Sex," and, just previously, as Puck in a revival of "A Midsummer Night's Dream," Matheson Lang, and Guy Bates Post, who will, it is understood, have the principal rôle in Edward Sheldon's play of the new South, "The Nigger."

Euripides's "Medea" in Gilbert Murray's verse translation will he produced in Jordan Hall, Boston, on the evening of December 10 and on the afternoon of December 11, under the auspices of the Bryn Mawr Club of Boston. The proceeds are to swell the fund heing raised for the further endowment of the college. George Riddle, who played Œdipus in the Harvard production of that play, twenty-eight years since, has been appointed coach for the performances. Joseph Lindon Smith is planning and supervising the scenery and costumes, and Malcolm Lang has composed the music for the choruses and is training the singers and accompanists.

Mr. H. B. Irving is steadily growing; perhaps it will not he long before he is generally acknowledged as the legitimate heir to his father's position as master of the English stage. True, he has not yet wholly escaped from his troublesome identification with some of his father's most famous parts. Just now he has attained great success in a revival of "The Lyons Mail," at the Queen's Theatre, London. The *Times* comments (the words are, of course, not Mr. Walkley's) that the genius of the son is the same as his father's in this respect, "that he turns what in the hands of many good actors would he mere melodrama into a vivid and real tragedy."

Formed only in March of the present year, under the special patronage of J. M. Barrie, Ellen Terry, Sir A. W. Pinero, Sir Charles Wyndham, and others, the Playwrights' Association in London is already so well advanced in practical working order as to he able to announce the presentation of two plays at the Aldwych Theatre. These are a comedy in three acts, "Love in a Tangle," by Harry B. Vogel, and a one-act play, "The Debt," from the pen of Mrs. Tom Godfrey—both authors, who, in accordance with the requirements of the "regulations," have not had "a three or four-act play produced by any recognized London management in the evening [illegible]."

We have referred to the completion of a new drama by Gerhart Hauptmann, of which the title is now announced: "The Night." The piece is intended for the Lessing Theatre, Berlin. The dramatist's brother, Karl Hauptmann, has meantime made his first appearance as a playwright. His offering takes the form of two Napoleon dramas.

Louis N. Parker's English version of the three-act play hy René Fauchois, "Beethoven," first given at the Odéon last spring, will be produced by Sir Beerhohm Tree, at His Majesty's Theatre, this evening. The composer is not for the first time presented on the stage; he appeared as a character in a play by Pietro Cossi, produced at Milan, as well as in a German piece, "Beethoven und sein Neffe," by Heinrich Heinemann, and in an earlier French play hy Walther Schinz, produced at Paris in 1907.

The Teatro Argentina of Rome, which hears to the Italian stage something of the relation of the Comédie Française to that of France, opens its present season on December 1. The piece chosen for the opening is a comedy by Goldoni. The modern repertory for the season 1909-1910 will include the French plays "Connais-toi," by Paul Hervieu; "Griselda," by Gerhart Hauptmann, and Galsworthy's "Strife." Among the new Italian pieces will be Butti's "Il Paese della Fortuna," Moschini's "Tristano e Isolta," Giulio di Frenzi's "Saturnale," Cirinini's "Reginetta," Vannicola's "Elsa l'abandonnata," Lucio d'Amhra's "Esuli," Soldani's "Andrea del Sarto," Beneili's "Il Amore dei tre re," and unnamed comedies by Nino Martorio and Vincenzo Morello. There will be also an adaptation of "A Midsummer Night's Dream," by the poet and novelist, Diego Angelo, for the performance of which Mascagni has heen engaged to conduct the orchestral rendition of the music of Mendelssohn.

Music.

The Macmillan Company will. puhlish at an early date "A Book of Operas," by H. E. Krehhiel, the veteran musical critic of the New York *Tribune*. An account of the history and plots of the more celebrated operas, with little or nothing of technical criticism, is promised.

A sixth printing of E. L. Burlingame's translation of the "Art, Life, and Theories of Richard Wagner," selected from his writings, is announced hy Henry Holt & Co. In this one volume the cream is skimmed from the eleven volumes of the German edition of the master's works.

There is a steady improvement in the quality of the songs selected and printed for use in puhlic schools. "Standard Songs and Choruses," by M. F. MacConnell (American Book Co.), corroborates this statement. It is encouraging to find in such a collection. in place of the trash formerly offered, such gems as Schumann's "Lotus Flower," Schubert's "Hark! Hark! The Lark," Grieg's "To a Primrose," Chopin's "Maiden's Wish." Such songs cannot fail to awaken a love of what is best in music, which ought always to be the chief object of musical exercises in schools, though it seldom is.

The revival of dancing is among the striking phenomena of the day. One of its most interesting hranches is well illustrated in "The Folk Dance Book," compiled by Dr. C. Ward Crampton, director of physical training in the New York public schools (A. S. Barnes & Co.). Here are "The Chimes of Dunkirk," a "Danish Dance of Greeting," a "Shoemaker's Dance,"

a "Children's Polka," a "Vineyard Dance," an "English Harvester's Dance," a "Finnish Reel," a "Cossack Dance," and others in great variety. The music is given in each case, reduced to its simplest form, so that any one can play it at sight; and preceding it are detailed directions to the dancers. This form of exercise combines the elements of song, play, drama, and vigorous muscular work. The present collection is carefully supervised, everything that might prove objectionable being eliminated. The editor pays a tribute to the teachers of physical training and the class teachers in the New York city schools, "whose devoted efforts have developed folk dancing in its legitimate sphere to the great benefit and joy of many thousands of children."

D'Albert, Busoni, Mottl, Reuss, Stavenhagen, Stradal, Wolfrum, and Weingartner are the editors of the complete edition of Liszt's compositions, now being issued in Leipzig by Breitkopf & Härtel. In their prospectus the publishers say pertinently that, if these works really were, as some still maintain, insignificant, the world would have long since passed them by.

Francis Thomé, the composer, died at Paris on November 16, aged fifty-nine years. He had made several popular musical adaptations of poems by Hugo, Musset, Lamartine, etc., and was the author of numerous compositions for pianoforte, as well as of songs and of operas, including "Roméo et Juliette."

Art.

TWO KINDS OF REALISM.

In the past days the National Museum at Rome and our own Metropolitan Museum have put on exhibition each a Greek statue displaying the unusual characteristic of realism. Yet a greater contrast than these two marbles afford can hardly be imagined. One has to remind himself that the Temple Ministrant of Rome, a mere serving maid at her work, is not a nymph or even a goddess, while at first glance the Old Market Woman of the Metropolitan strikes one as a bad *genre* piece of no very ancient date. Yet both were cut by Grecian hands, presumably not a century, either way, from the Venus of Milo. On close scrutiny also, the nobler figure of the two appears the most conscientiously realistic, while the meaner form is prettified for effect. We have to do with contrasting ideals of Greek realism, and since realism is the leading artistic motive of our generation, a comparison of the two manners should be instructive.

First, as nearer at hand, we will look at the Old Market Woman. She strains forward crying her wares. The whole body is contorted as by a sort of recoil from her vociferation. Her right arm, now missing, brandished some dainty before a possible buyer; her left clasps two fowls to her side while the hand holds a laden basket. Her brow and exposed breasts display the outrages of time, but her legs and sandalled feet have through the drapery the easy elegance of a Tanagra statuette. The artist has flinched from creating a complete effigy of shrivelled decrepitude. No Greek has given us the tragic fact embodied so pitifully in Rodin's Armorer's Wife. This Market Woman is caught at her most energetic moment, at one of those instants in which she defied her habitual lassitude. Surely, the theme is highly characteristic. Why, then, is the impression of the thing so unsatisfying? An examination of the Temple Ministrant will go far to answer the question.

The Temple Ministrant at Rome is plainly a daughter of the people. Her sturdy body is girt by a clumsy yet decorative mass of drapery rolled tight to raise the impeding garment from her ankles. Her hair shows nothing of that elaboration which we have come to regard as invariable in Greek sculpture. Two short tresses are drawn forward from the nape of the neck and roughly knotted over the brow—just the easiest method of getting the hair out of the way. The head is as boyish as the figure. The Girl of Anzio, as the Italians call her affectionately after the place of her discovery, is standing intent on some minor office in the cult. Her left arm bears the fragment of a salver upon which stood some utensil needed for the service. Her firmly poised body betrays her solicitude. The eyes regard the salver fixedly, less with reverence, it seems to us, than with a simple determination that the trifling service shall be well performed. Yet the beauty of this menial action is akin to that of the processional marbles of the Parthenon, and the realistic traits in figure, costume, and hair-dressing so readily adjust themselves to the grand style of the whole that only with difficulty does one perceive that these elements are quite exceptional. The whole thing is of a lofty yet intimate beauty which finds Christian expression in the familiar lines:

> Who sweeps a room as for Thy laws
> Makes that and th' action fine.

Between the Temple Ministrant and the Old Market Woman there is an immense difference in workmanship, the latter being quite mediocre in execution, but this difference is transcended by a far deeper discrepancy in vision. Whoever made the Old Market Woman saw her as she chose to be seen, and as every passer-by saw her. He accepted for his theme just the insight of everybody about. Whoever created the beautiful Temple Ministrant managed to see something that probably everybody else overlooked. The common gaze doubtless would have been on the statue of the divinity, or on the officiating priest. It was the artist who caught the simple majesty of that robust figure poised as it held faithfully a cup, a knife, or some such nothing. The joy of that discovery we feel as we look upon the Girl of Anzio.

Yes, the difference transcends technic. You might put the Roman statue through a series of casts and reductions until in handling it became infinitely the inferior of the Old Market Woman, yet it, whatever its debasement, would remain wholly superior as a work of art. It is, as with all creation, a question of vision. If you do your seeing with simple curiosity, accepting unchallenged the average testimony of the eye and the casual observation of all the world, no technical mastery will save the result from cheapness and essential insignificance. The true artist is the aristocrat of the eye. He makes his bold exclusions and stern selections. He looks deep into appearances, and is wary of their immediate appeal. Thus he reveals things that the rest of us are too hurried or too untrained to see at all. Let no one say that the mere age and ugliness of the Old Market Woman are the trouble. She simply is seen too quickly and at the wrong moment. There is now at the Union League Club, a picture by Daumier in which marketwomen and decrepit clerks are huddled into a third-class compartment, and the group and each individual have the sombre distinction that we associate with Michelangelo and Millet. It seems all a matter of the aristocracy of the eye. Otherwise the difference between the artist and the average man would be merely quantitative—only that, for example, between the champion golfer and the awkward amateur.

The Story of Dutch Painting. By C. H. Caffin. New York: The Century Co. $1.20 net.

Mr. Caffin has taken advantage of the Loan Exhibition of Dutch painting to bring out one more of those books which he produces with such facile amenity. He gives in attractive form a considerable amount of historical and biographical information of timely interest. His enthusiasms are safe, his style engaging and well-bred—in fact, he commands so many of the qualifications of an æsthetic mentor that one feels a distinct ungraciousness in going below the suave appearance to the critical reality.

And, first of all, though much is said about the times, the lives of the artists, and the subjects of the pictures, surprisingly little is said about the pictures themselves—and that often in very general terms. Frequently words are used in the loosest sense. "Abstract," for example, as applied to Rembrandt, seems to mean nothing more than spiritual. But the word leads Mr. Caffin into linking Rembrandt up with the Far Eastern painters and the modern followers of Matisse. Now, these moderns may or may not belong in this galley, but nothing is more certain than that

the most phantasmagoric invention of Rembrandt is based firmly on reality. He always consents to the appearance, however he may sublimate it for his own purposes. To confound him with the Buddhist painters, real followers of the abstract, only wastes words. Botticelli, Greco, Goya, Blake, may seem variously to belong in such a category, but hardly Rembrandt. Mr. Caffin is caught as he frequently is by putting on an equal basis the artist's concrete work and his own inferences as to its spirit.

The neglect of facture as such will, indeed, seem to many the cardinal defect of this interesting book. One might read it without grasping that masterly touch by which main planes and linear accents are made identical, which is the especial contribution of Frans Hals to painting. Again, Hals is called "a follower of surfaces" as if that were a defect in a painter. Note the subtle confusion between the literary and technical connotation of the term. Mr. Caffin seems to imply superficiality as a defect where an artist would regard it as a high merit. One may well doubt whether those pathetic masterpieces, the latest of Hals's regent pictures, do, indeed, bespeak a senile decline. Fromentin said as much, but still felt the rare emotional qualities of the work. But is it possible that only palsy and failing sight put Hals in position to compete with Rembrandt? Many will feel that here we have to do with an ultimate and superb experiment. The later years of Titian afford an interesting parallel, and here, too, we are asked to believe that his most tremendous work is a product of disintegration. Such judgments will bear revision.

Vermeer of Delft is treated with a somewhat perfunctory enthusiasm, for here our guide fears lest we be over-persuaded by a consummate technique—a peril which is possibly small. There is no recognition of the variety and loveliness of the textures; even Chardin is not Vermeer's superior in this regard. But, again, such considerations may seem perverting to the simplicity of the popular view of art.

This book, with its numerous well-chosen reproductions from European galleries, will hardly serve the turn of those who love painting as such. Those, however, who wish merely information about artists and their times, and discursive meditation about pictures, will find it both edifying and entertaining.

From Lemcke & Buechner we have received sample sheets, with a plate of Count A. de Lahorde's "Les Manuscrits à peintures de la Cité de Dieu de Saint Augustin." This fine work will be published in largest folio with more than one hundred and thirty heliogravures. The edition (for sale) is limited to 100 copies, and the price is 250 francs. Of the bibliographical value of the work the name of the author is a guarantee.

From the same source we have the prospectus of "Die Bildnismlnlatur in Deutschland von 1550 bis 1850," by Ernst Lemburgen. The form is small folio; there will be 65 colored and 300 monochrone reproductions; the edition is of 400 copies, and the subscription, subject to increase after December 5, is from 200 marks, according to binding.

The sculptor Rodin and the art-critic and poet Charles Morrice are collaborating on a book treating of old French churches.

When the late Mr. Walters of Baltimore invested in Barye bronzes, Barye and his friends, the painters at Barbizon, were held in cheap consideration by their compatriots. The Baltimore man bought the sculptor's works, Scotch amateurs the painters'. They were wise in their generation. A good opportunity to see Barye at his best is afforded by the exhibition of some of his bronzes at the Cottier Galleries in New York city. There are fine Baryes, many of them early proofs, at the Metropolitan, and there was an excellent collection to be seen last season at the Grolier Club, but these specimens were and are shown under glass. At Cottier's one sees the bronzes quite exposed. And to appreciate such work to the full, this is the great condition.

Peter Kroeyer, the Danish painter, died in Copenhagen November 21.

Pierre Langlade, the designer whose death is announced from Scotland, was of French birth, but had long resided in that part of the world where he died at the age of ninety-seven. Another artist, English by adoption, who has recently died at the age of eighty-one, is Edward Rischgitz, a native of Hungary. A pupil of Corot's, he has been better known as a teacher than as an exhibiting artist. He was one of the founders of the Royal Society of Painter-Etchers and Engravers, and the author of books on tapestry designing and china painting.

Finance.

THE WHOLE WORLD'S HARVEST.

The Liverpool estimate of Broomhall on the whole world's wheat crop of 1909, perhaps the most important of the annual European calculations, is at hand this week. It shows the present year to have established an absolute high record in wheat output. The 3,346,968,000 bushels named as the world's total mean an increase of 9¼ per cent. over the 3,063,280,000 of 1908. Compared with the 3,226,768,000 bushels of 1906, the previous record, the increase is 3⅝ per cent.; compared with the year of scarcity, 1907, it is 15 per cent.

Two continents exceed all preceding records with their wheat production—North America and Europe. North America runs 17,000,000 bushels above 1901, which was the previous record. Europe's total runs 158,616,000 bushels beyond 1908, and surpasses the previous high record, that of 1906, by 21,160,000. Every important wheat-growing country of the world shows increase over the previous year except Austria-Hungary, Germany, and Spain. Russia's harvest runs 68,800,000 bushels beyond its previous high record. Canada's crop is 24,000,000 bushels above its best previous yield. The English harvest is the largest since 1899, and with that exception the largest since 1892; though it is highly interesting to observe that its 64,000,000-bushel yield of 1909, while making these encouraging comparisons, is still less than half the 140,000,000-bushel harvest of 1855, which has never since been equalled.

No such change in the world's grain trade from the two years of actual scarcity, 1907 and 1908, could occur without important results on commerce, finance, and industry. The wheat crop shortage of 1907, pretty much throughout the world, may have had some effect in aggravating the financial disturbances of that year. The failure of 1908 to replenish the empty storehouses—the whole world's "visible supply" of wheat, at the end of that year's harvest, was 14,000,000 bushels below even that of a year before—caused the past season's enormous shrinkage in the international grain trade, and also made possible the extortionate price to which wheat and flour were raised in last May's "Patten corner" at Chicago. It is a matter of interest, then, to inquire how far the financial situation generally will be benefited by the new turn in events.

The two immediate questions which arise are: first, what is the bearing of this harvest on the world's industrial prosperity, and, second, what is its bearing on our own export trade in grain? That return to abundant harvests, after scarcity, will be a help to better times, is a certainty. It is commonly said that the world-wide industrial activity of 1906 and 1905 had its origin largely in the world's bumper wheat crops of those years, and the inference is reasonable. It is also true, however, that the wheat yield does not settle everything. The world's bad wheat crop of 1889 was accompanied by an industrial "boom," and the two years of troubled markets, 1893 and 1884, broke all previous records in the harvests. This does not prove that good crops or bad crops had no effect at all, but it shows that the harvest's influence may be superseded by other economic forces. In the years referred to, it was the money market whose influence was paramount. Unbounded financial confidence and easy credit offset the bad world's harvest of 1889; derangement of money markets, due to abuse of capital and credit, offset the good harvest results of 1884 and 1893.

Our export trade in wheat will be influenced necessarily by the fact of bumper crops abroad. In so far as Europe raises enough to feed itself, it has less need to draw on the United States; and even in those European markets which must always buy foreign wheat, Russia

and Canada are already competing actively with our exporters. This would apparently mean that wheat prices cannot continue high. The question of storehouses depleted as a result of two short crops just before 1909, is, however, also to be considered. The granaries of the world, on November 1, held 30,000,000 bushels less of wheat than in 1906, but slightly more than in 1908 or 1907. What is more immediately interesting is that the stored-up supply in Europe's hands, though still some 12,000,000 bushels below November, 1906, is above all other years since 1904. In other words, a long forward step has already been taken towards restoring normal equilibrium between supply and demand.

BOOKS OF THE WEEK.

Anstey, F. The Travelling Companions: a Story in Scenes. Dutton. $1.
Apuleius. Apologia and Florida. Trans. by H. E. Butler. Frowde. $1.15.
Ayscough, J. San Celestino. Putnam. $1.50.

The House of the Heart:
And Other Plays for Children
(*Just issued*). By CONSTANCE D'ARCY MACKAY. *$1.10 net, by mail $1.15.*

"On Christmas Eve," "The Christmas Guest," and eight other well-written, short plays in verse. A satisfactory book to fill a real need.

"Each of these one-act plays contains a distinct lesson, whether of courage, gentle manners, or contentment. The settings are simple, and the costumes within the compass of the school-room. Full directions for costumes, scene setting, and dramatic action are given with each play. All of them have stood the test of actual production."—*Preface.*

NEW YORK, THURSDAY, DECEMBER 2, 1909.

The Week.

The tariff question has been so wisely and so definitely settled, the mouths of the remonstrants have been so emphatically stopped, the ultimate consumer has been so unmistakably persuaded of his own non-existence, and the country's desire to be let alone has been so forcibly expressed, that just three months after the enactment of the wisest, safest, and best tariff measure this country has ever known, the standpat champions are facing the dread possibility of a reopening of the tariff discussion in Congress. That the call to battle is sounded from within the ranks of true believers in Aldrich and Cannon, only makes the situation worse. The prospect of a tariff war with Canada is bothering the Administration. The men who shape our tariff laws for us have so got into the habit of taking for granted the submission of a free and valorous people that the possibility of a foreign nation refusing to do likewise seems scarcely to have entered into their consciousness. Hence we have the challenge to Canada, flung out in sublime indifference to the fact that to-day Canada can get on better without us than we without her. We sell Canada manufactures nowadays and buy raw products from her. War with such an opponent would mean that our protected interests had been robbed in the house of their friends.

There was an undeniable appropriateness in asking Speaker Cannon to make an address before the Knife and Fork Club of Kansas City. He has always been able to rival the gentleman whom Thackeray saw dining on a Mississippi steamboat, and of whom the novelist testified that "the play of his knife was fearful"; while the fork that the Speaker uses is by preference a pitchfork. He had glorious sport in describing the insurgent Republicans as so many Luciferes flung over the battlements of Heaven. If they are not "read out of the party"—and Mr. Cannon denies that he has attempted to read them out—they ought, he declares, to take themselves out and no longer remain as so many traitors in the camp. What the Speaker would like is a nice little, tight little party, in which discipline would always be perfect, and in which no members would have such queasy stomachs as not to be able to swallow his alliances with Tammany, and his other pretty ways. Whether such a party could ever carry an election or not, is a question with which the Speaker does not vex his righteous soul. But he is going to be the most loyal supporter of President Taft, let no man doubt of that. On this point, Uncle Joe's words were effusive to the point of being suspicious.

The gathering of eleven hundred New Yorkers at the dinner of the Economic Club, last Monday night, to listen to the exposition of the Monetary Commission's work and purposes by its chairman, was a most wholesome sign of the times. Remodelling of a bank and currency system is commonly esteemed a dry and technical topic, and a long address on that theme, in which the problem itself is canvassed without even specific discussion of the political programme of the Commission, is not what is usually classed as material for an after-dinner speech. Yet this large audience listened with the closest attention to Senator Aldrich's analysis of banking practices as the Commission had found them here and abroad. Senator Aldrich frankly stated that no banking bill has yet been drawn up for Congressional consideration, and that in fact the Monetary Commission itself has not yet agreed, even in principle, on the solution which it will recommend. That Senator Aldrich personally favors a Central Bank of Issue has long been known, and was easily to be inferred from his address, notwithstanding the fact that he carefully abstained from recommending that recourse as a probable solution. Our readers are aware of our own feeling that the plan of a Central Bank must be approached with the utmost caution and reserve, until three important considerations have been made clear, viz., its actual relations to existing banks, its possible relation to politics, and the question not only of its nominal but of its certain independence of promoting and speculating influences in finance. We do not feel ourselves ready to subscribe unreservedly to Mr. Aldrich's conclusion that, because the central banks of England, France, and Germany have no political entanglements, therefore a central bank of the United States could have none. Nor, until we know how such immunity is to be guaranteed, should we feel confident in the freedom of such an institution from the influences which have at times so balefully perverted the functions of our life insurance companies and even of our banking institutions.

In answer to the question, "Will Congress investigate the Sugar Trust?" Representative Payne is quoted as saying:

> I don't think it will. The matter is being pretty thoroughly investigated now. An investigation by Congress will depend on whether the Federal district attorney cannot do it more effectively than Congress.

But this is not at all the question. If a Congressional investigation at this time would involve any risk of interfering with the effectiveness of the criminal prosecutions, it should by all means be put off to a later day; but the prosecutions, while the most urgent thing now in hand, cannot possibly cover all the ground of this portentous scandal, and cannot in some respects search as deeply. We all hope that Mr. Stimson may succeed in getting one or more of the real criminals—the big men in the Trust—behind the bars, but it is only too certain that a great part of the rascality will prove to be beyond the reach of legal punishment. The country has a right to know the full truth of the case, and to fix the guilt of those responsible for this great body of corruption, both in business and in politics. Congress only can bring out this truth. Senator Culberson and Senator Borah have declared most emphatically for a Congressional investigation, and there is every reason to expect that it will be urged upon the Senate. The only proper qualification of the demand is that expressed by Senator Borah, that it should be made subject to the necessities of effective prosecution of the criminal cases.

The State Department's "waiting" attitude towards Nicaragua is rather a peculiar policy, if its purposes are as pub-

liely given. The chances of Zelaya's being kicked out of the Presidency by Estrada are considered so good at Washington that it has been decided to let Estrada avenge upon his rival the execution of the two Americans, Cannon and Groce. This is in strange contrast with the earlier announcements of the awful things we were going to do to Zelaya. The State Department at that time had a good section of the press behind it. If, backed up by popular opinion, Washington has as yet done nothing, the implication is that it has insufficient information to proceed on, or that the information it has secured does not make out a good case for us. The American soldier of fortune and professional trouble-maker is not the proudest product of our civilization in tropical countries. If Spanish-American revolutions were not so plenteously officered by natives of this country, and if Spanish-American revolutions were not so frequently backed by the sympathies and money of American residents, there might be fewer upheavals in Spanish-America. If Groce and Cannon belonged to the stormy petrel class, our hands are by so much weakened. If their execution was a violation of international law, the State Department should demand reparation without delegating Estrada to get it for us.

Interested as we have long been in the modernization of the navy yards, we have felt that any reform to be thoroughgoing must begin with the Department itself—that is, with the eight bureaus. Now Secretary Meyer strikes a genuine blow at the faults of the bureau system by planning to abolish one of them in its entirety—the Bureau of Equipment—and grouping all the others in two divisions. In one of these are placed all the bureaus dealing with the human material of the navy, the Bureau of Navigation, the Bureau of Medicine and Surgery, the office of the Judge-Advocate-General, and the Bureau of Supplies and Accounts. In the other are to be found the Bureaus of Steam Engineering, of Yards and Docks, of Construction and Repair, and of Ordnance. This change has repeatedly been urged by Secretaries of the Navy and boards of officers, and cannot be too highly commended from the point of view of theory. Whether a closer coördination and coöperation of all the bureaus and both divisions will be obtained under the new system, time alone will show. But Mr. Meyer is not content with thus stirring up the "mossbacks" of the Navy Department. He has created a long-needed division of inspection and a division of operations of the fleet which will, it is to be hoped, provide for the systematic training of the crews and their officers in minor and advanced tactics. Abolishing the Board of Construction, which has been of little use save to formulate and demand of Congress great schemes of naval expansion, Mr. Meyer has provided an "advisory council" of four officers, the chiefs of the four divisions of material, personnel, inspection, and operations, who will become *de facto* a small "general staff" for the Secretary. Both in the Civil War and in that with Spain it was necessary to create such a council after the outbreak of war. Unquestionably, this arrangement will place enormous power in the hands of the four "aides" to the Secretary, as the new advisers are to be called. But here, again, everything will depend upon the unselfishness and devotion of the men in the highest places.

In the navy yards, Mr. Meyer has compromised. He has not adopted the Newberry reforms *in toto*, which seemed to us based on common-sense and accepted business practice. He has instead established two divisions in the navy yards, one of hull and one of machinery. It is only fair to add that this is in line with some foreign practice, and that the head of each division will report to the officer in charge of the navy yard, who is, hereafter, to be chosen with an eye to his especial qualifications. It would obviously be unfair to the Swift Board and to Mr. Meyer to pass upon this plan before it has had a chance to demonstrate its advantages. A single manufacturing department must always be superior to two, in theory. It remains to be seen if, in practice, the navy-yard situation warrants a division. Great economies and a marked increase in efficiency accompanied the Newberry plan, and ought, in any event, to be maintained. We are glad to note, therefore, that the installation of a modern bookkeeping system is to be continued, and that technical officers will be kept at the head of the navy-yard divisions.

There is one resource which might and should be availed of to make such horrors as that of the Cherry mine impossible. The Department of Commerce and Labor would be exercising a function that is wholly salutary, and would be performing a plain duty, if it instituted a thoroughgoing investigation of the subject, and laid down the conditions which ought to be insisted on by the laws of every State in order to secure proper protection for the lives of the miners. The practice of other countries, especially Germany, is far ahead of ours, and American public opinion, if authoritatively informed on the subject, would insist that the present conditions should no longer exist. The plea that the expense of taking proper measures would be prohibitory may safely be pronounced worthless in advance. With the many agencies concentrating public opinion upon the right treatment of problems of this kind, there can be no doubt that, with the guidance of the Federal Government, the necessary legislation could be secured in all our mining States.

The defeat of the proposed prohibition amendment in Alabama, known as the Comer amendment, is important as the first serious setback sustained by the anti-saloon wave which has swept over the South in the past few years. The majority against it is decisive, being reported as more than 20,000 in a total vote of about 100,000. The political prestige of Gov. Comer, and the political future of Judge Weakley, whom he had fixed upon as his successor, were staked on the issue, and the contest was intense. The result is one more illustration of the fact that sudden changes in fundamental matters are seldom so complete as they seem on the surface, and that it is wise to allow time for the setting in of a reaction before concluding that the change is permanent. A special interest attaches to the outcome on account of the reported intention of Mr. Bryan to declare for prohibition as a paramount issue. First rate "paramounts" are rare birds, and the Nebraska gentleman will have to wait a long time before he can catch another as lively as was the silver paramount under the peculiar conditions of 1896.

Gov. Fort's strong opposition to the establishment near Lakewood, New Jer-

sey, of a sanatorium for the treatment of incipient cases of tuberculosis, undoubtedly reflects local sentiment. People everywhere resist the building near them of hospitals for the treatment of infectious diseases. The Lakewood protest is only one of many of the kind. Our readers will recall how strenuously the proposal to found a hospital for consumptives in Sullivan County was withstood by the residents there. This is natural, but it is none the less unreasonable, and, we might almost say, inhuman. The danger is greatly exaggerated in all such cases. Under proper regulation the exposure to infection is very slight. But even if it were not, can we deprive sufferers of what may be their one chance for life? It is a lamentable thing that our very scientific advance in the knowledge of the causes and nature of maladies like tuberculosis seems to implant a new instinct of dread or cruelty regarding those afflicted. No one hesitated in the old days of ignorance to care for consumptives under conditions which were far more dangerous to others than the location of a preventorium near-by could possibly involve. The change to the modern aversion and alarm is neither pleasing nor creditable. It makes the tender mercies of science to look cruel.

The report of football casualties for the last day of the season is seven severely injured, of whom three may die. Five of the accidents occurred in a single Western game, in which the players evidently took football seriously. They have at least rendered a service in giving a final demonstration of the danger of the present game. But there should be no let up in the agitation for a radical overhauling of the rules because the season is over. The Rules Committee's meetings are held in December and January, and the final changes are sometimes not made until well into the spring. Hence the necessity for keeping after the committee from now on in order that they shall not be deceived into thinking that the outcry during the playing season was merely newspaper agitation and public hysteria. Never before has the feeling against football been so deep and widespread; never have the college authorities heard more directly and frequently from alumni and parents of students.

Mr. Roosevelt's words of congratulation on Commander Peary's achievement should bring home to people's minds the true question that has been raised by Dr. Cook's claims. The matter at issue has been no ordinary affair of personal rivalry; it was something in which all the world, and especially this country, had a real stake. "I am inexpressibly rejoiced," writes Mr. Roosevelt, "at his [Peary's] wonderful triumph, and proud beyond measure as an American that this—one of the great feats of the ages—should have been performed by a fellow-countryman of ours." This is the feeling with which we should all have been filled, and which would have been echoed throughout the world, had not attention been turned from the glory of the achievement to the question of the genuineness of Dr. Cook's asserted priority. It will be impossible ever to reëstablish the state of mind that would naturally have prevailed in the absence of this controversy; the thing has been hopelessly cheapened and belittled. This injury, not simply to Peary, but to all the world, and especially to all Americans, Cook has done by his imposture, if he is an impostor.

Though the weight of numbers in the House of Lords was thrown against the budget by a vote of 350 to 75, it cannot be denied that the weight of argument in the upper chamber has been decidedly against both the constitutionality and the wisdom of rejection. No one speaks with more legal authority than Lord James of Hereford, and this eminent Conservative made a reasoned protest against the plan of the majority of the peers. When we reckon in Lord Cromer, Lord Balfour of Burleigh, and Lord Rosebery, on the same side, we begin to see what a preponderance of intellect and statesmanship the "lords from the wild" were counted upon to swamp by mere number of coronets. The spectacle lends point to the contention of the Conservative *Daily Telegraph* that the House of Lords ought to be reconstituted in such a way that really able peers should not be swept away by a brute majority of noble nobodies. Lord Morley's powerful speech of last Monday cannot be brushed aside merely because he is a member of the Government. It was a delicious stroke of satire by which he called Lord Lansdowne the Hampden of the present day. There may well have been in this a slanting reference also to Rosebery's comic suggestion that the Lords were withstanding taxation without representation.

The relations between Church and State in France enter on an acute stage, curiously enough, with the accession of M. Briand to power. It was M. Briand who carried the Separation Law of 1905 through the Chamber, and who, as Minister of Public Instruction and Worship, was concerned with the application of the law and the supplementary legislation of 1906. The Minister was then attacked by the extreme anti-clericals on the ground that his attitude toward Catholicism was too conciliatory. Now that he is Premier, the time would seem to have come for establishing a lasting peace between the Government and the Church. Instead, we have the bishops taking the field against the Government's policy in primary education, and the organization of a Catholic party is seriously discussed. Have the bishops been led to believe that M. Briand may be driven into making concessions? That would be a risky step for the new Prime Minister to take, facing as he does, within his own party, the Combes faction of rabid anti-clericals: a faction that is strong, and alert, and hungry for power.

At the Parliamentary election recently held in Norway, women for the first time voted for the candidates, and were themselves eligible for election. This revolution was accomplished, writes a correspondent of the Paris *Figaro*, with the same calm which prevailed when Norway detached itself from the sister-kingdom. At Christiania, for example, something under forty thousand women ("twenty-three thousand married women and fifteen thousand spinsters") took part in the election of members of the Storthing, yet there was "no outcry in the streets, no posters on the walls." They order elections more noisily in France: if no more wisely. Perhaps the tranquillity with which the innovation was effected is partly traceable to the long participation by the women of Norway in the communal elections—and to the circumstance that they have also served as members of the municipal councils.

THE SUPREME COURT VACANCY.

There has been no denial of the statement, first explicitly made by the Washington correspondent of the *Evening Post*, that President Taft intends to appoint Judge Lurton to succeed the late Judge Peckham in the Supreme Court. Indeed, the President has been avowedly conferring with members of the Senate Judiciary Committee for the purpose of discovering whether the confirmation of Judge Lurton would be opposed. There is no objection that we have heard of except on the score of age. Judge Lurton is a Democrat, but might well be selected to succeed a Democrat. His judicial record, with which President Taft is personally acquainted, is declared to have been honorable, and we know no reason to doubt it. But he is sixty-five years old; and it is gravely open to question whether any man of his age should be named for the Supreme Court, especially in view of the present composition and needs of that body.

Section 114 of the Federal Judiciary Act provides that "when any judge of any court of the United States resigns his office, after having held his commission as such at least ten years, and having attained the age of seventy years, he shall, during the residue of his natural life, receive the same salary which was by law payable to him at the time of his resignation." Later acts provide for retirement, with pension, on the ground of physical disability, short of ten years' service. Now, of course, there is no direction here that a President shall not appoint a judge who is above sixty years of age, but it is at least a fair implication that Congress expected every Federal judge to be capable of serving ten years before retiring at seventy. We believe that when Mr. Edmunds was Chairman of the Judiciary Committee of the Senate, he and his able colleagues, such as Senators Hoar and Thurman, insisted upon a strict construction of the statute; they would not report favorably the nomination of any Federal judge upwards of sixty. The Judiciary Committee of the present Senate, which is decidedly weak in its Republican membership, may not follow that precedent. In fact, it is announced that Senator Borah, who is probably the best lawyer among the Republican members, though his name is at the bottom of the list, has already seen the President and has agreed to waive his objection to Judge Lurton on the ground of age. It is to be presumed, therefore, that Mr. Taft can secure Lurton's confirmation, if he makes a point of it. But that will not alter the misgivings of many persons whose only interest is in the strong personnel and continued usefulness of the Supreme Court.

This conviction is not based upon a narrow interpretation of the Judiciary Act so much as upon the general principles which ought to govern, and upon the exigency which exists to-day in the Supreme Court. As a rule, everybody admits that a reasonably long service by the judges of the Supreme Court is desirable. It tends both to heighten its prestige and to give consistency and force to its decisions. If a powerful and dominating mind appears in the Court, as in the case of a Marshall or a Miller, let us say, service during a period of years will give it freer and richer scope, and leave a deeper impress upon our jurisprudence, than would be possible in a short time. And the abler the associates of such a judge, and the longer their term of vigor on the bench, the greater will be the unity and weight of their decisions. All this is elementary, and there is general agreement that Federal judges ought to be under sixty at the time of their appointment. Historically, only six Supreme Court justices have been named at the age of sixty-one or upwards, the oldest being Mr. Lamar, who was sixty-three when appointed.

The greatest actual need of the Supreme Court is the addition of one or two vigorous junior judges. This is not to say that the older justices are incapacitated, or that we ought not to value their old experience. No one charges that their mental powers are unequal to their work. But there is also a physical strain put upon them, from which they ought to get relief at the hands of younger and more able-bodied associates. We refer, of course, to the hard labor which has to be expended upon the preparation of opinions. After the Court has decided in conference what view to take in a given case, there is need of prolonged industry in compiling precedents and examining the authorities and running down the citations in the briefs of opposing counsel, and then of care and pains in beating out the whole in a decision that shall be as lucid in form as it is masterly in substance. A vast amount of this kind of work is constantly thrown upon the Court, and it is obvious that the older judges are not equal to the exertion required.

It is, we know, said of Judge Lurton that he is as robust at sixty-five as most men at fifty-five. But we cannot disregard the law of averages in these matters. If a judge turns out in old age to be a physical wonder, we may thank our lucky stars, but we have no right in advance to count upon his being a physical wonder. In all these things, we have to reckon with the general expectation of life. We cannot go on the supposition that every judge a President names will prove to be an Eldon. And with nothing but regard for Judge Lurton, we think that Mr. Taft would show a keener appreciation of what is lacking in the Supreme Court to-day, if he filled the vacancy with a younger man.

SECRETARY BALLINGER'S REPORT.

It is doubtful if any annual report by a Secretary of the Interior was ever watched for as was that published by Mr. Ballinger last Monday. This is due not only to the importance of the matters dealt with, but to the controversy which has been raging, in the press and at public meetings, over the policy of the new Administration respecting what remains of the national domain. We have had a whole series of charges and rejoinders. Subordinates of the President have been almost literally flying at one another's throats. The dispute went such lengths of bitterness that Mr. Taft himself was finally compelled to take notice; and in his long and clear review of the points at issue he definitely referred to Secretary Ballinger's forthcoming report as a document which would cover the whole case in a way to satisfy all reasonable men.

It would be too much to expect that the actual report will make an end of controversy, but it is only fair to say that on the main question it is strong and satisfactory. After reading what Secretary Ballinger sets down about facts and policies relating to the conservation of water sources, it will not be possible longer to assert that there is a quiet official conspiracy on foot to alienate to the public harm public lands which are capable of being used to develop water power. The Secretary, of course with the President's approval,

goes so far as to contend that such lands should never be patented to any private owners whatever—whether individuals or companies—but should be held in perpetuity by the Government. This policy, which we heartily commend, is not intended to eliminate private development of these resources, but the plan is to grant only easements on the land, under long-term leases, and not further to allow sale and ownership outright. Obviously, if a Water Power Trust has been, as alleged, scheming to obtain for itself all the shores of streams in the Northwest, it must now consider its plans frustrated by the Interior Department.

Indeed, so thoroughgoing is the project of control and regulation which Secretary Ballinger outlines, that we shall probably hear many cries of protest from Western Congressmen, and it may be from Western people. They will say that the terms laid down are so onerous that no one will undertake to meet them, and that these untouched lands will not be taken up and improved. But this will be for Congress to decide. As the President promised, the whole matter is sharply placed before those who frame the laws. It is for them to write the laws about land into the law of the land. In the long run, the President and his Cabinet can only execute what they decree. The withdrawals of public land from entry are merely provisional, until Congress shall determine what is to be done with them. Secretary Ballinger's citations from the official records show, as President Taft said they would, that no land whatever available for power sites has been restored to public entry by this Administration. The suspensory power of the Government has been duly exercised. It is now time for the law-making power to do its work.

The Secretary's report further calls upon Congress to amend the laws relating to the classification of public lands, which are now too roughly or vaguely defined. Much deception and fraud have arisen from patenting as timber lands areas which were really desired for mining. Mr. Ballinger urges that the law should be framed to describe public lands "according to their greatest apparent use," as made evident by the studies of the Geological Survey. Far-reaching, too, is his recommendation that, in connection with coal lands, the right to mine should be separated from the title to the soil. We may also mention the Secretary's request for an appropriation to cover the cost of surveying the railway-grant lands in national forests. He enumerates over 6,000,000 acres of unsurveyed lands, which, because they have not been surveyed, are not subject to local or State taxation. In this way, asserts Secretary Ballinger, an "annual donation" of about $300,000 is made to these timber-land owners. He would, therefore, have Congress order the lands to be surveyed at once, and impose a lien upon them for reimbursement of the cost of the work.

Outwardly and formally, then, we must conclude that the Secretary of the Interior has made a full answer to those who have been alleging that he was secretly in collusion with land-grabbers and monopolists. There is a sense, however, in which no answer has been made, and none can be made in writing. A vast amount of discretion is necessarily reposed by the laws in the Secretary of the Interior. Immense property rights are constantly coming before him for adjudication, and he may, always within the letter of the statute, turn the scale insensibly to the side of injustice or bad public policy. Hence the urgent need of having a Secretary whose bearing and reputation are such that fraud shrinks from his presence and charges of wrongdoing fall broken before him. It is to establishing a name for probity and official sternness, like Secretary Hitchcock's, that Mr. Ballinger will need to devote his main energies, so that the people will believe that sound laws are energized in the pure and vigorous personality of their enforcer. In that view, Secretary Ballinger is still on trial, as any new man in his office must be.

THE COMMON MAN'S VOCABULARY.

The gulf between life and the literature that pretends to mirror life is something we are always aware of, and something we always wink at. We speak of Kipling's India. But competent authorities tell us that not only do British administrators in India behave quite differently from Kipling's heroes—which we might have guessed for ourselves—but they talk differently. People who know the Far West assert that the cowboy's language is not Alfred Henry Lewis's. People who know Alaska assure us that the English tongue in the Yukon Valley is not what it is in Jack London's books. Chimmie Fadden's dialect is a highly polished elaboration of the real Chuck Conners. All this is familiar enough. What is not so commonplace is the difference between the way in which the literary man misrepresented life a hundred or even fifty years ago, and the way in which he does it now. To talk like a book in Jane Austen's day meant something quite different from talking like a book in Richard Harding Davis's. Once upon a time "affectionate and ever-dutiful sons" wrote to their "beloved and honored parents." Nowadays, if we may take the novelist's word for it, "yours in haste, T." writes to "Dear Pop" for a fat remittance. A hundred years ago, as to-day, the scribblers have, as a rule, been false to the spoken language of life. One hundred years ago they rose above the vernacular. To-day we generally sink below it.

The present hour has supplied us with two striking examples of how the common man thinks and writes in the presence of that most impressive of all facts, Death. Among the twenty men who were rescued after a week from the St. Paul's mine at Cherry, Illinois, was an Italian, Joe Peggatti, who had drafted the following last testament, addressed to his wife:

> This is the fourth day we have been down here. That's what I think, but our watches stopped. I am writing in the dark because we have been eating the wax from our safety lamps. I also have eaten a plug of tobacco, some bark, and some of my shoes. I could only chew it. I hope you can read this. I am not afraid to die. O, Holy Virgin, have mercy on me! I think my time has come. You know what my property is. We worked for it together, and it is all yours. You have been a good wife. May the Holy Virgin guard you. I hope this reaches you some time and you can read it. It has been very quiet down here, and I wonder what has become of our comrades. Good-by until heaven shall bring us together.

Samuel Howard was not so fortunate as Joe Peggatti. Rescue for him came too late; his body was found in the second level of the mine, and with it a diary which he seems to have kept up until the last moment of consciousness. Some of the entries run:

> If I am dead give my diamond ring to Mamie Robinson. The ring is at the post office. I had it sent there. Henry Caumicent can have the ring I have home in my good clothes. . . . The only thing I regret is my brother that could help mother out after I am dead and gone. I tried my best to get out but could not. . . . To

keep me from thinking, I thought I would write these few lines. . . . Sixteen to 1 P. M., Monday. The lives are going out. I think this is our last.

This is indeed simplicity of style, the simplicity which comes upon man in the face of ultimate facts. But its simplicity is not enough for the modern novelist, who would proceed to reduce Joe Peggatti's or Samuel Howard's last words to a mixture of slang, blasphemy, and ejaculatory heroics; reduce him, that is, from a man thinking upon himself and Fate to—what is the favorite phrase?—a brute beast with his foot in a trap.

Take the ordinary American in his normal condition, and nothing does him more injustice than the strong mixture of slang, expletive, and primitive vocabulary with which the literary man endows him. Actually, your farmer, clerk, or commercial traveller knows the meaning of long words from the Latin, likes them, and uses them, probably with greater frequency than the college professor outside of his classroom. The college professor says, "I missed my chance," where the man in the subway says, "I overlooked the opportunity"; the professor says, "Billy worries me," where the man in the subway says, "Billy causes me anxiety"; the professor says, "I bought myself some clothes yesterday," and the other says, "I completed my purchases yesterday." Professor, artist, and literary man in revolt against the old conception of a book-language strive and attain the limit of baldness in expression. The tendency is emphasized by the literary tradition that high social standing goes with more or less complete inarticulateness.

A real Bronx street-cleaner has been overheard saying to a fellow street-cleaner: "You are old enough to have conquered your timidity." How many college professors would let fall a phrase, like that without feeling very priggish for five minutes thereafter? Whether the cultured classes profess simplicity because it's the right thing socially or because it's the language of the Bible, novelists should not overlook the fact that butchers and grocers say "desire" for "want," "precisely" for "just," "magnificent" for "great," and "substantial" for "a good deal." If we need further proof we find it in the newspapers written for the masses. There is no stinting of the long word and the pedantic phrase in the columns of your great popular tribunes.

As a nation brought up on much oratory from the platform and the press, we naturally incline to the long, orotund word. As a nation of traffickers, we incline to the commercial traveller's ideal of style, which takes the same direction. Our cultured classes are under the influence of rugged British usage, which says "The Twelve o'Clock Sunday Closing Bill," instead of "An Act for the Regulation of Sunday Traffic in Liquors"; and says, "I am quite sure we can put you up," instead of "Plenty of accommodation for every one, Bill." It is greatly to be desired that Literature and the Drama should take notice of this fact.

WILLIAM DE MORGAN.

After the word "Finis" in Mr. De Morgan's latest (and longest) novel* are appended a few paragraphs alluringly headed, "The Author to His Readers Only." They might have been printed as a preface; but the writer seems to offer them as a kind of reward for those who have faithfully made their way to that final milestone. As bearing upon Mr. De Morgan's theory of fiction, these paragraphs have more than the casual interest suggested by their opening lines. *Verser comme si c'était pour soi* is, he declares, what the story-teller should be encouraged to do.

This certainly is his own habit, and the secret of his charm. He has poured himself forth as if merely for his own satisfaction, and has thereby gained a whole world of affectionate auditors. There has been nothing at all like it in our day. The best of our contemporary novelists, highly as we are able to commend their technical skill, their ingenious matter, their remarkable "average" of workmanship, do not so come home to our business and our bosoms. What we really await with impatience is the man who is simple and strong enough to disregard the rules with safety—*verser comme si c'était pour soi*. Fiction, indeed, if we are to judge it by its masterpieces, has thus far declined to be reduced to code In a vague sense, it bears a relation to the drama similar to that which painting bears to sculpture. Its triumphs have been subjective and intimate. Cervantes, Le Sage, Fielding, even Balzac, are more akin to Montaigne than to Shakespeare. De Morgan has more in common with Dr. Holmes than with Mr. Pinero.

The antecedents and personal history of such a writer are of more than ordinary interest. William Frend, De Morgan's grandfather, was a lieutenant-colonel in the Indian army; his father, Augustus De Morgan, was born in Madras in 1806. He was presumably "sent home" to be brought up, according to Anglo-Indian custom. At all events, his later life was spent in England, most of it as professor of mathematics at University College. He was a master of his subject and a voluminous writer; you may find a dozen titles under his name in any large public library. There are lively touches in more than one of these books, and the reminiscences of the mathematician's wife make it perfectly clear that he had a very characteristic humor of his own. The writer of these reminiscences was herself an interesting person, if for no other reason than because she knew Lamb personally. Her father, William Frend, once a Cambridge tutor, became an insurance actuary in London, and may very likely have known that Charles Lamb who perched at a desk in the East India Office as well as the stammering, convivial Elia.

His namesake, William Frend De Morgan, was born just seventy years ago, in November, 1839. He went to the University College School, but from the first his bent seems to have been toward art rather than scholarship. At twenty he entered the Royal Academy Schools. He studied painting there for several years, but himself says that he cannot claim ever to have been a painter. His first serious work began when, in 1864, he busied himself with stained glass. Even then he had not found his lifework. It was six or seven years later that he took up ceramics: a potter he remained till 1904. In this art he won a *succès d'estime*, but no widespread recognition, and a very moderate pecuniary reward. It is to be wondered whether his popularity as a novelist may not have "boomed" his tiles and vessels of "Persian ware"; may not have made a merchantable thing of the "De Morgan lustre," which has long been favorably known among amateurs. Mr. De Morgan disclaims the invention of this ware, regarding it rather as a re-discovery of certain colors—one blue in particular—to be found in ancient Persian pottery. Oddly enough, he has made a number of inventions in other fields—a duplex gearing for bicycles, a sieve for refining clay, and a smoke-consuming grate. These again, though he still has faith in them, have failed of commercial success. It remained for him, at sixty-four, with ill health and old age upon him, and a lifetime of half-rewarded endeavor to deter him from further effort, to make the final triumphant invention of himself as a popular novelist.

It is easy to make too much of the accidental aspect of such a success as Mr. De Morgan's. How we encouraged ourselves to marvel, only the other day, at Du Maurier's similar emergence into

*"It Never Can Happen Again." By William De Morgan. New York: Henry Holt & Co.

the focal point of that immense applause which is chiefly reserved nowadays for the conqueror in the popular arena of fiction! And with De Morgan does not the marvel assume to the fancy some sort of arithmetical or geometrical increase, since the author of "Joseph Vance" was eight years older yet than the author of "Peter Ibbetson"? Yet it may fairly be held that these two men had had the best possible preparation for ripe imaginative work. It would be a happy day (for the reviewer at least) if ninety-nine hundredths of our busy young novelists were suddenly to perceive the folly of attempting to utter what is not in them. Suppose they were to reckon up the real masterpieces of fiction—the dozen or so great novels which the world can not afford to let die—and note how many of them were written on the farther side of the Ostlerian deadline! Du Maurier and De Morgan brought to their self-delighting task hands and brains unwearied by the piteous struggles of professional authorship. The cream of experience had not been detached piecemeal by the separator of daily copy-making. There is a heavy risk for those who lisp in copy because the copy has to come, and whose mature years are given to the effort (not without its satisfactions) of wresting a livelihood from the manufacture of an endless series of words to be paid for according to the testimony of the editorial yardstick.

If his portraits are at all to be trusted, Mr. De Morgan looks ten years older than he really is. His face is that of an old man, lined, sunken, and sombre. Six years ago, when a serious illness overtook him, he might well have seemed to himself nearly at the end of his activity. But at a certain stage of his convalescence he was casually moved to set pen to paper by way of pastime. A dim notion of a story had come into his mind, and the result was the first chapter of "Joseph Vance." As completed some time after, the tale took a very different shape from that in which the writer had at first vaguely fancied it. According to report, he had projected a severe and realistic narrative, unrelieved by humor, and the attempt went heavily until he presently hit upon his true vein. With the appearance of Lossie, he says, the story took hold of him, and after that he was eager to find out the end of it. It came to him, however, in a way so haphazard that he had great difficulty in giving it any appearance of consecutiveness.

"Ill-written" it is, according to all the canons of our "well-made" fiction—without rhyme or reason to the hasty or impatient reader who wants to know what happened, and be quick about it. Very much of it seems irrelevant to the progress of the tale, and yet so packed with subtle intimation and cross-allusion are these many pages that it is not safe to skip a sentence, if one is to stand even a chance of understanding the matter as a whole. And the matter as a whole will not seem to a certain type of mind quite worth the pains—a simple series of events, surely: why not tell them straight out, and be done with it? The difficulty appeared so serious that the present writer, in reviewing the story at the moment of its first appearance, assumed confidently (and, no doubt, complacently) that it would prove caviare to the general. Let us hope that the instant and amazing success of the book proved a lesson to him! He had overlooked the fact that "Joseph Vance," however it might impress a certain type of mind, went straight to the heart we all have in common. As Lady Cecil has said—perhaps a trifle superciliously—De Morgan writes for people who "like to read with the senses as well as with the reason."

The thing that struck us all first about "Joseph Vance" was its well-nigh incredible indifference to the literary fashions and tendencies which have manifested themselves during the past three or four decades. It almost seemed that the story must have been written a generation ago. Could any writer with a knowledge of Meredith and Hardy and Kipling and Mrs. Humphry Ward have written such a book? Belated Victorianism was the cry everywhere lifted and prolonged by really modern critics. There was some difference of opinion, perhaps, as to whether the phenomenon represented a survival or a reversion. I do not know that any authority is capable of deciding that important point even now. But there was no doubt about the main fact: the Victorianism itself was as plain as a pikestaff. In the address "To His Readers Only," on page 688 of "It Never Can Happen Again," Mr. De Morgan admits the charge good-humoredly—or with the least possible hint of impatience:

> At the risk of more Early Victorianism—I have a heavy score against me—may I use the rest of this fly-leaf, otherwise blank, to touch on another point? I know that gossiping with one's readers is a disreputable Early Victorian practice, and far from Modern, which everything ought to be.

But Early Victorianism was only half the verdict; the author of "Joseph Vance" was at once detected as an imitator of Dickens, a master long more or less discredited in polite circles. I suppose Mr. De Morgan would not dream of denying a discipular relation to the Boz who ruled the world during his growing years as school-boy and art-student. Perhaps the younger De Morgan imitated him in certain early attempts at satirical writing to which he confesses. That would have been natural enough; what strikes us as odd is that after half a century he should have retained his allegiance to the now half-discredited despot of his youth. There is a Rip van Winkle suggestion about the whole affair—as if the forty years' addiction to stained glass and pottery were nothing more than a long dream, from which the writer at length awoke, to take up the sentence where he had broken it off.

An idle suggestion, of course. Without that forty years of labor and of ripening, these "Early Victorian" novels could not have come into being. But if we were to follow the fancy a little farther, we should picture the first chapter of "Joseph Vance" as done at the moment of awakening. And there are scenes and figures in all of the later novels which could hardly have been written if Dickens had never set the model. However, a little study of this resemblance reveals the fact that it is chiefly a matter of surface and minor detail. Fondness for the grotesque-pathetic, as found in the low life of a great city—*the* great city; a tendency toward caricature and mere facetiousness; a passion for strange nomenclature—some such matters as these the earlier and the later novelist appear to share. No doubt De Morgan, like his master, does "like to be read with the senses as well as with the reason," and no doubt he is content with the broad method when it best promises the attainment of his end.

But his method, as well as his material, is very different in most important respects from that of Dickens. He is far less the showman, the dashing prestidigitator. The supreme test of modern fiction is, after all, characterization. What we are always asking of the novelist is, Are these people of yours real, do they live and move before us—with us? If not, you cannot think to put us off with your inventions, your lectures, your bits of description, your mere events.

That effect of breathing reality cannot be given offhand. Dickens had his exciting creative experiences: you recall how Pickwick emerged gradually, as if by his own volition, from the fat elderly buffoon of the earlier chapters, to a sort of benevolent and venerable Father Christmas. But that kind of steady growth and development is not characteristic of most of his people. They are rather like figures at first blocked in roughly upon a well-lighted canvas—destined to change much in coloring, a little even in outline but never to move, to step down and out into life. De Morgan's people are far more like Thackeray's—persons whom we meet, and of whom we at first get a vague impression based upon their physical appearance, their manner, their speech. We better our acquaintance with them very gradually, as we must with people in "real life." Their sponsor does not pretend to know much more about them at the outset than we

do; but he knows where they are to be found, is sure that they are worth following up, takes us again and again into their company, and, with our assistance, as it seems, makes in the end some appreciable approach toward an understanding of them. He does not try to persuade us that we have got to the bottom of them: they live, hence are unfathomable.

In this best achievement of De Morgan's art there is nothing distinctively Victorian—it is precisely what the most "modern" novelists are striving for—for the most part in vain. The theory of his belatedness is further discredited by a little attention to his "plots"—that range of action within which the inevitable delimitations of the author's mind and sympathy leave his creatures free to move. Fancy the theme of "Somehow Good" in the hands of the great Philistine Boz, or the great snob Titmarsh: De Morgan's treatment of it would have been inconceivable to the Early Victorian mind. It is essentially, amazingly modern. It assimilates all that is wholesome and affirmative in our somewhat self-conscious tolerance with regard to sexual matters, and shows how naturally what the Victorians would have disposed of as a lost woman—a woman betrayed by ignorance in girlhood—may be throughout her mature life a strong, happy creature.

"Somehow Good" still stands, I think, as De Morgan's best work thus far. There he evidently saw his way pretty well from the outset. In "It Never Can Happen Again" he is embarrassed by two distinct themes, or groups of characters, and hardly succeeds in getting them to work together plausibly, though there is one supreme point of contact. The first two chapters open in a way strikingly suggestive of "Joseph Vance" and "Alice-for-Short." "Lizarann," in her slum, with her blind father and her drunken uncle, is very like another Alice. We expect her to emerge, after many quiet adventures, into a kindly and comfortable middle-class circle, where she may marry the amiable young fellow she deserves, and be duly happy. One doubts if the author may not have had himself some such faint foreshadowing. Perhaps he was turned aside by the fear (to which he has owned) of repeating himself. Lizarann is the most enchanting of children, and would have become, we are sure, a maiden worthy of her irresistible forerunners, Lossie and Alice and Sallie. The fact that "Blind Jim" was the original title suggests that Lizarann and Jim Coupland were intended to be the important figures in the book. So in a sense they are, but a small minority of the multitudinous pages of this narrative concern them. They remain, for the most part, an infinitely lovable and pathetic pair, in the background of the action. In due time Lizarann dies of the consumption to which she is doomed from the outset, and blind one-legged Jim is cut off at the moment when the news of her death is being brought to him. In the act of death he becomes, it is true, the determining factor in the main action. If Lizarann's dying cry had not mysteriously reached her father across those miles of English country he would not have run out upon the highroad, Lord Felixthorpe's car would not have run over him, Sir Alfred Challis would not have been knocked on the head, and Judith Arkroyd would have found herself a little later in a position equivocal, to say the least.

It is with Judith and Challis and his wife, Marianne, that the story as a story is concerned. If it were not for the considerations connected with Deceased Wife's Sisters, the story would have been simple enough, and could have been told in fifty words. But there are such considerations, and many of them; the result is a considerably involved plot.

But it is all unnecessarily ingenious. Surely the author of "Somehow Good" does not need to hatch up this sort of complication. The disappointing thing is that neither Challis nor Judith nor Marianne is quite worth the infinite attention we are called upon to pay them. Perhaps the trouble is that one finds it hard to like any of them thoroughly. The warm personal affection wrung from us by the chief characters in the other novels remains untouched by this minutely exhibited trio—though it goes forth readily enough to several of the other characters: Lizarann, Jim, the Reverend Athelstan Taylor, and his Adeline. Unfortunately, the Deceased Wife's Sister group have the floor the greater part of the time. I am not sure that the impatient mind may not be justified of its impatience as to the lengths, linear measure, to which is carried the discussion of them.

But it would be sad to believe that no more volumes as portly were to come from this in all senses genial hand.

H. W. Boynton.

THE POETRY OF FATHER TABB.

Father Tabb was not only a poet, but a scholar, and he would permit us to approach his somewhat singular work in a spirit of academic classification. And first his mood was eminently gnomic and sententious. A poem exceeding the measure of the sonnet was exceptional with him. He not merely limited the number of lines, but their length. The pithy octosyllable was his favorite form, and shorter lines are common. Nearly the whole of his work consists of epigrams in the Greek sense. These miniature poems recall the passages that one extracts from the more discursive meditations of Henry Vaughan or our own Emerson. But no one is tempted to excerpt from Father Tabb. One quotes the entire poem or nothing. Nor is this lack of salient line or phrase a defect. Examine these epigrams microscopically, and no member but shows some curious felicity, some delicate modelling touch of the file. These tiny gnomes are calculated wholes, structures so unitary that decoration is almost excluded. This work has an odd artificial naturalness, to find a parallel for which I am driven to the minor arts of Japan. You will recall how an artisan of Nippon, finding a knot of wood, a water-worn lump of amber, or the bleached tooth of a beast, will work out some most ingenious and expressive bit of sculpture by the slightest modifications of the natural form. He seems to be indeed less of a creator than a discoverer and exhibitor of some casual beauty already existing. And so many of Father Tabb's best poems give the impression of simply occurring under a hand that gives only the ultimate contour. Take

THE BIRTH OF A WORLD.

A hidden world,
Unwombing, hurled
From dark to light.
And to the skies
Its wondering eyes
The livelong night
Doth Science turn, with sighs
When shadows take their flight.

Another birth—
A soul to earth
But newly come!
Its destiny
Eternity.
With wonder dumb,
The heavens look down to see
Our faces turned therefrom.

Here is a wonderful knot on the two sides of which the skilful carver, perceiving two solemn masks, has with reverent solicitude merely cut away the obscuring fibres.

On several of his title-pages is found the word lyrics. It seems to me a misnomer. Elaborately musical as his verse is, it has little singing quality. We find in these miniature structures not the free and spontaneous gush of song, but the balanced and calculated forms of concerted music. And here the outer form corresponds perfectly to the inner mood. These poems are products of meditation, they suggest quite as much a way of thinking as a mode of feeling. In fact, for most of them one could find a quite definite formula. All this relates Father Tabb to those English poets who by a stretch of language are called metaphysical, Donne and Vaughan being the perfect examples of the tendency. But there was something so finely traditional, so eminently Christian and Catholic, about Father Tabbs's formula, that his conceits seem purged of personal whim. At all times Christians have believed that the visible world is but a glass in which we see darkly the image of God

Childish as the process seems to the eye of skepticism, this habit of regarding the outer world as a provider of *exempla* which must be converted into spiritual values has been profoundly salutary, and if its literary fruits have been too often barren allegory, it has also kept alive a fanciful and questioning attitude toward nature. This is soil in which the imagination may thrive. The danger for poets of this allegorizing temper is that of writing into the ensample book of nature their own hasty answers; and the critical question with regard to such poets is, how far intellectual ingenuity has usurped the place of authentic imagination. Now is not the time to weigh Father Tabb in this balance. To me personally it seems he veered now inward to his own agile fancy, now outward to the gradual undertone of nature, as his mood and inspiration served. A poem like the following, one of his subtlest, will bear either classification, in which case the pragmatist tells us the distinction really doesn't matter:

DUST TO DUST.

"In the centre of each snow-crystal or drop of rain, is found a minute particle of dust."

Earth wedded, life atwain
In heaven, were endless pain,
Uplifted from the plain
To realms of snow or rain,
Of dust each lonely grain
To dust will come again.

To me, however, this seems a border-line poem of an especially instructive sort. Its quality is, I think, genuinely imaginative, but a fuller inspiration would have drawn the prose text into the rhythmical homily. To exemplify the difference between Father Tabb possessed by his theme and merely playing with it, I need only cite one of his most engaging conceits:

SHEET LIGHTNING.

A glance of love or jealousy,
It flashes to and fro—
A swift sultanic majesty,
Through Night's seraglio;

Where many a starry favorite,
In reverence profound,
Awaits, with palpitating light,
A step without a sound.

It is odds whether Father Tabb is most likely to be remembered by a few little masterpieces of this frankly artificial sort, or by those poems that reach deeper issues. I sometimes fear that, in the mood of sheer artistry and moral detachment he is most perfect.

At any rate, for sheer lapidary perfection, Father Tabb hardly has his mate among American poets, or for that matter, among the English poets of his time. Even Aldrich had a vaguer sense of his own limitations and was more frequently below his best. Except for the French poet Heredia, with his single sheaf of sonnets, I can hardly name a modern poet whose garden being so small is at once so habitable and so impressive. At Father Tabb's more obvious affinity, Emily Dickinson, I can only glance. It seems to me that he contains in far finer form pretty much everything that is valuable in her thought. He, too, has his lapses. The intricate balance of his little poems made the construction of each almost as much of a technical adventure as the framing of an ode, and he did not always come out well. I could, but will not, cite a number of poems where the allegory will bite a sensitive reader.

Within the permitted space, I can merely hint at the variety contained within limits apparently narrow. We have seen that most of the poems are parables in little. The texts are usually furnished by the singing birds, thickets, meadows, and hills of the Maryland Blue Ridge. Except for the simpler Bible Stories, there is rarely a suggestion of history. The verses are profoundly literary, yet one hardly guesses what latent influences from older poetry may have transpired. The world of struggling men and women is held far away. Occasional intimations of a love become reminiscent hardly constitute a bond. We have to do simply with the transaction between nature and a curiously meditative mind.

The life that so tranquilly expressed itself in poetry was a broken one. Born in Virginia, in 1845, John Bannister Tabb gave his youth to the Confederacy. His education had been solitary, from tutors, from whom, perhaps, like Vaughan before him, he got an inkling of "logicals." He puts himself down modestly as a "clerk" in the Confederate navy. Serving on the blockade-runner Robert E. Lee, he had the unclerkly privilege of being shot at without returning the fire. After many successful trips to the British East Indies, the Lee was captured, and "Johnny T.," as his shipmates called him, sent to the military prison at Point Lookout, Maryland. There Sidney Lanier found him, and their life-long friendship began. At the age of twenty-seven, we find John B. Tabb a Catholic proselyte already in deacon's orders, and a belated undergraduate of St. Charles' College, Ellicott City, Maryland. This institution, with occasional interruptions, he served as a professor of English literature until his death. In his thirty-ninth year, he was ordained priest. Whether the twelve years' delay implies a mental hesitation, or mere inertia, whether one may link with it those more lyrical poems of unrequiring love that appear in his first volume, we, perhaps, have no right to ask. In any case, postponement was almost the rule of Father Tabb's life. The only thing regular about it was the tireless cultivation of the solitary muse. The magazines soon gave him recognition, and his name became a bond between readers of a certain discernment, but he was nearing fifty before the first of those little square volumes saw the light, in 1894.

Of his personal predilections, except that he was a cultivated lover of music and a pianist of no mean accomplishment, one knows only what may be gathered from his verse. Possibly some of his associates of St. Charles may supply the personalia one craves, but this were better left undone than done indiscreetly. About two years ago, the blindness that for years had threatened him became imminent. It found pathetic reflection in his poetry. There were rumors that he was in want and dependent upon the bounty of his college. This he denied in a characteristic note to the *Nation* (August 27, 1908), in which he declared that despite the wishes of his associates, he would live in college just so long as his savings availed to support him and no longer. Happily, the dire issue never arose, for death overtook him among his colleagues and on the scene of his long labors as a teacher.

Father Tabb had his rebel side. His correspondents could tell of whimsical drawings and pungent limericks of most unpriestly, if innocent, stamp. Some of these oddities, I believe he printed in a volume which I have not by me. I fear they made but a poor showing in the types, though they were heartening enough in his own fine chirography.

Father Tabb was the poet of the single metaphor. His sonnets reveal this strikingly. They follow usually the consecrated formula. "As" leading the octave; "so" announcing the sestet. Their lack of density as compared with his briefer forms reveals the tenuity of the ingredients. To borrow a pertinent term from the graphic arts, he was one of the "little masters" of the metaphor. Take from his first volume that audacious but eminently Catholic conceit:

OUT OF BOUNDS.

A little Boy of heavenly birth,
But far from home to-day,
Comes down to find His ball, the Earth,
That Sin has cast away.
O comrades, let us one and all,
Join in to get Him back His ball!

I know of no poem that illustrates better the artful simplicity, the whimsical mating of sheer imagination and pure conceit that make Father Tabb to his readers simply one of the most engaging figures in poetry. He would have been the last one to regard such personal enthusiasms as final measures of literary values. Yet gratitude for a gift that never presumed, never imposed itself, never sunk to commonplace, is more in order now than criticism.

Father Tabb's intimate and genuine feeling for correspondences is fully expressed in the poem "Fraternity," with which this brief tribute may fittingly close. The stanzas might have been cail-

ed more ambitiously "Predestination Unto Poesy."

I know not but in every leaf
That sprang to life along with me,
Were written all the joy and grief
Thenceforth my fate to be.

The wind that whispered to the earth,
The bird that sang its earliest lay,
The flower that blossomed at my birth—
My kinsmen all were they.

Ay, but for fellowship with these
I had not been—nay, might not be;
Nor they but vagrant melodies
Till harmonized by me.

FRANK JEWETT MATHER, JR.

NEWS FOR BIBLIOPHILES.

Among collectors the books of Poe are still in the ascendant. On the evening of November 22, the large sum of $3,800 was paid for Mr. Maier's copy of that thin pamphlet, "The Murders in the Rue Morgue" (1843), which has been already referred to in this column. This is the highest price ever paid at public auction for any American printed book. There are a few other American books which, if they were to come upon the market would undoubtedly surpass this record, such, for example, as the Bay Psalm Book (1640), the first book printed within the limits of the present United States; the first Massachusetts Laws (1648), and the first New York Laws (1694). These are all much older books. One other modern book is as valuable—Poe's first book, "Tamerlane and Minor Poems" (Boston, 1827). Of this, which may be considered the most valuable nineteenth-century printed book in existence, three copies only are known, two, both perfect and with the covers, being in the library of F. R. Halsey of this city, and one, lacking the covers, in the British Museum.

Two thousand nine hundred dollars was paid at the same sale for the interesting association copy of Poe's second book, "Al Aaraaf, Tamerlane, and Minor Poems" (Baltimore, 1829). This, as we noted last week, was the copy used by Poe when preparing for the press the collection of his poems published in 1845 as "The Raven and Other Poems." In that book the following note, signed "E. A. P.," was prefixed to the section "Poems of Youth":

Private reasons—some of which have reference to the sin of plagiarism, and others to the date of Tennyson's first poems—have induced me, after some hesitation, to republish these, the crude compositions of my earliest boyhood. They are printed verbatim—without alteration from the original edition—the date of which is too remote to be judiciously acknowledged.

Notwithstanding this statement these poems are not "printed verbatim." The variations are numerous as shown by the alterations in Poe's autograph in the Maier copy. Another peculiarity of this copy is that the date of imprint instead of 1829 is (or seems to be) 1820. The late J. C. Chamberlain, who examined the book when it came up in the Harold Peirce sale in Philadelphia in 1903, was of the opinion that the date had been altered in ink from 1829 to 1820 and *by Poe himself*. His purpose was, Mr. Chamberlain surmised, to show a book which antedated Tennyson's first volume of verse, the "Poems of Two Brothers" (1827), which is referred to in the note quoted above. If this could be proven it would make the volume still more interesting. It is certainly, as we said before, the most interesting "association" Poe book in existence.

The most important items in the second Haber sale, which will be held by the Anderson Auction Company on December 7 and 8, afternoons and evenings, are the early editions of the works of Edmund Spenser. They include the first edition of "The Faerie Queene," both parts (1590-1596), also a second set with the first part, second edition (1596), and the first and second folio editions (1609 and 1611), the "Complaints" (1591), "The Shepheard's Calendar" (1591), and "Colin Clouts Come Home Again" (1595).

Among other early English books are Langland's "Vision of Piers Plowman," the second edition (1550); More's "Utopia," first edition in English (1551); Puttenham's "Arte of English Poesie" (1589); the "Mirrour for Magistrates" (1610); Phaer and Twyne's translation of Virgil (1596); Milton's "Poems," first edition (1645), and the second edition (1673); "Paradise Lost" (1667), with the second title-page, and with the seven preliminary leaves added from a later issue; Shirley's "Poems" (1646), and Killigrew's "Comedies and Tragedies" (1664).

Among books by American authors, the Whittier items are perhaps the most interesting. Mr. Haber's "Mogg Megone" (1836) is the copy given to Miss Lucy Hooper, and the letter of presentation accompanies the book; his "Narrative of James Williams" (1838) is accompanied by Whittier's letter acknowledging the authorship of the book; and his "Moll Pitcher" (1832), is the Foote copy with two letters from the author relating to it, in which he says, under date of April 22, 1884: "I doubt whether any copy of 'Moll Pitcher' is extant. It was a mere pamphlet and only a few copies printed."

The oldest book in the collection is a fine copy of that famous picture book of the Middle Ages, the "Nuremberg Chronicle" (1493), which contains upwards of 2,000 wood-cuts. This copy contains the numbered leaves at the end which were left blank, in order that the owner might write in a continuation of the history.

On December 6, Stan. V. Henkels will sell in Philadelphia a collection of autograph letters and historical documents, mainly from the correspondence of Elbridge Gerry, including fine specimens of many Revolutionary names.

In presenting One Hundred Famous First Editions in English and French Literature, Ernest Dressel North, No 4 East Fifty-ninth Street, has been guided quite as much by literary interest as by bibliographical rarity. The earliest volume is Sidney's "Arcadia," 1590, with six facsimile leaves. Only ten copies of this book are known in any state. The latest item is the modest volume, Whittier's "Snow Bound," 1866.

Between these terms there is much of interest that can only be glanced at. Milton's "Paradise Lost," with the second title page—or is it the first? the doctors disagree; Goldsmith's "The Vicar of Wakefield"; Butler's "Hudibras" with the sequels; De Foe's "Robinson Crusoe," all three parts; the thin pamphlet in which FitzGerald published the first English Rubáiyát—here are some of the most striking exhibits. The original issue of the "Tattler" and "Rambler" are to the layman among the more inviting volumes.

In sheer rarity, all yield to Robert Burns's "Poems," the third edition, 1787, This copy is in its original binding, and throughout the skeletonized proper names have been filled in in the poet's handwriting.

There is an excellent catalogue, with full literary and bibliographical indications. The exhibition extends from December 1 to 14, and will appeal equally to bibliophiles and unpretentious gentle readers.

Correspondence.

ENGLISH FOOTBALL.

TO THE EDITOR OF THE NATION:

SIR: In your article on "The Football Deaths" (the *Nation*, November 4), you mention the reluctance of the football rules committee to change the game

in such a way that it will resemble the English, or soccer, game, in which players are not allowed to run carrying the ball. The chief argument we have heard against this change is that the English game is not an exciting enough contest for the young American.

Permit me to point out that "soccer" is not "the" English game, and that it is not an exciting enough contest for most young Englishmen. In the English universities two games of football are played—Association, or "soccer," and Rugby. Rugby, in which the player is allowed to run carrying the ball, is somewhat the more popular. But neither game has the universal vogue among schools and colleges which the American game enjoys. At Eton, for instance, neither game is regularly played; there are instead two local varieties of football, the "wall game" and the "field game," both differing widely from the games played at the universities. Winchester and Harrow also have games of their own. In the colonies Rugby is played in a way which seems to tend toward something like the American game.

There is, therefore, no game which occupies in England the position held by football in America, and the English universities have no predominant autumn sport. There are rowing events of some importance, track meets, hare and hound runs, and golf tournaments. Lacrosse has been introduced, and has met with some favor. Hockey—which we call "shinny" and relegate to vacant city lots—is nearly as popular as "soccer" football. But no one of these games is absorbing enough to arouse universal interest and displace its rivals. A few hundred undergraduates watch the more important "rugger" games, but no match except the Oxford-Cambridge is played on a field provided with seating arrangements for a large audience.

Those who have followed football on both sides of the Atlantic believe it would be a useless retrogression to attempt a modification of American football in the direction of either Rugby or "soccer." It is not the rules that make the English game safe. The excessive softness of the ground, which is covered with very thick turf and rarely freezes or even dries out in the football

season, is one explanation of the comparative freedom of English players from injuries more serious than sprains and bruises. But the great reason is the different spirit in which the games are played. The Englishman looks on a game as a means of finding amusement and exercise. He therefore refuses to take sport seriously, to "go in to the game hard" regardless of injury to himself or his opponents. Except in rowing, he pays little attention to training, coaching, and practice. And if he can afford to keep horses and hunt, or if he has facilities for shooting, or plays a good game of court tennis, he will not go in for organized athletics at all. A man in an English university does not play football unless he thinks football the most agreeable form of outdoor exercise, and as long as he finds in the game what he is looking for, he does not care a great deal whether his side wins or not. This increase of efficiency at the cost of time and comfort would not appeal to him at all, for the English athlete has other interests outside his game, and would not think of sacrificing his studies, his social pleasures, or his leisure to a sport.

It is this calm, casual, excessively amateur spirit, incomprehensible to many American athletes, which makes English games comparatively safe. Rugby, "soccer," and hockey might be dangerous indeed if played "for God, for country, and for Yale." If we wish to obviate the perils of American football it is not the rules we must Anglicize, but the temperament of the players.

F. SCHENCK.

Oxford University, November 15.

OPEN FOOTBALL.

TO THE EDITOR OF THE NATION:

SIR: In dealing with recent football casualties in an editorial paragraph, November 25, your statement, in reference to the Yale-Harvard game, that "the expectation that the Yale team would open up the game for the game's sake proved fruitless," seemed to one reader at least to do some injustice to an eleven which surely during the past season has practised the new football, with its theories of open play, more consistently and brilliantly than any other eleven in the East. Any unprejudiced observer of the game you criticise will bear witness to the fact that that contest illustrated with peculiar force the advantages from a strategic, as well as a humanitarian, standpoint, of the open game, as actually played by Yale, over the football of ten years ago, as employed by Harvard throughout the afternoon. Lilley's injury was not due, as you intimate, to Harvard's line-plunging tactics, but occurred in a broken field, and was caused by what seemed to many spectators an unnecessarily rough tackle, which the tension of the opening play of the game may explain, if it does not excuse.

New rules for enforcing less rough and more open play should undoubtedly be advocated, but it seems that the efforts of the football authorities in New Haven during the season which has just closed, as well as in previous years, to develop the game along open lines, should receive appreciation and approval, certainly from the *Nation*.

FRANCIS PARSONS.

Hartford, Conn., November 26.

[We certainly had no intention of doing injustice to the Yale team. Our criticism of the game agreed with the comments made generally in the press. —ED. NATION.]

THE "FOOTBALL" IMPOSTURE.

TO THE EDITOR OF THE NATION:

SIR: It seems curious that the opponents of the fight to kill or cripple, miscalled a game, and miscalled football, have never noted the fraudulent shelter under which its advocates take refuge, and the false pretence by which they secure a good will meant for a wholly different and real game. It is not football; it is handball. It is not the continuance of the old football of our boyhood; it is a "protective mimicry" of the name, used for something wholly different, and used "with intent to deceive." The reason why almost none were injured in the old and none are reasonably secure from death or maiming in the new is that in the former the ball was kept on the ground; in the latter it is kept in the arms; hence, in the former the violence was expended on the ball, in the latter it is expended on the holder, or his companions. The "old boys" who rave over the game for old associations' sake, and revile its opponents, are unconsciously befooling themselves or consciously befooling others.

ANTAPATE.

Hartford, Conn., November 26.

THE READING OF VERSE.

TO THE EDITOR OF THE NATION:

SIR: Whether or not it was by a coincidence that in your issue of November 11 there appeared an interesting paper by Professor Gummere of Haverford College, protesting against the modern method of reading verse from the platform and stage, and a criticism of the opening of the New Theatre, and of the inability of most of the players, including those taking the parts of Antony and Cleopatra, to render Shakespearean verse as verse, I do not know. In any case, I am sure that a great number of your readers hope that there may be an awakening of the players, the dramatic schools, and those who profess English literature and elocution, to the fact that prose is prose and verse is verse. Why should the interpreters of Stephen Phillips (his "Herod" is now to be seen in New York city), why should those who attempt to revive Shakespeare, fear to read their lines, not, to be sure, in the ranting or sing-song style of old-time barn-storm-ers, but in such manner as to treat their audiences to something of the beauty of the line, and to the richness of the poetical rhythm?

I wonder if the readers of the *Nation* happen to have seen the interview with Mr. Forbes-Robertson, that master of dramatic diction, which was published in one of the newspapers only yesterday? What the English actor says is so truly to the point, and bears so directly upon the discussion which the *Nation* has itself started up, that I presume to quote freely from his remarks. The trouble with contemporary stage elocution springs, says Mr. Forbes-Robertson, "from the actor's very desire to act well." Perhaps the word "realistically," expresses more precisely what must have been in the speaker's mind. Continuing:

In his effort to appear natural, he [the actor] mumbles his words as too many people do in everyday life. Much of this can be corrected by constantly bearing in mind the true value of vowels, the percussive value of consonants, and the importance of keeping up the voice until the last word is spoken. There must be plenty of wind in the bellows, so to speak. The great thing is to have the sound come from the front of the mouth. . . . The actor must learn to breathe deeply from the diaphragm and to take his breath at the proper time. Too often the last word is not held up, and that is very often the important word. . . . Schools for acting are valuable, . . . but, after all, the actors, like other folk, must be taught how to speak as children in the home, at school, and in society.

The people of the Latin races are, as a rule, better speakers than we Anglo-Saxons. They speak more distinctly and with a better sense of the value of sounds and words. They elide their words, to be sure, but they do it beautifully. We are slovenly of speech, we drop our "r's" and ignore our "ings," not only among the untutored, but more and more among the cultured, especially in England. . . . In Paris the best French is spoken. There the French actor should get his standards. In London the best English is spoken—the English actor should speak as the most cultured do there. In America it is different; there is not much to choose between the English spoken at Boston, New York, Washington and other cities. The American actor should follow the best practice among the cultured of all cities.

I need not apologize for citing so fully the words of one who is not only sane in his views upon right speaking, on and off stage, but who is also a successful exponent of his own philosophy. It is only fair also to add to Professor Gummere's apt discussion of the subject Mr. Forbes-Robertson's comment upon the elocution of the French stage. The art of reading verse may have become well-nigh lost, so far as we Anglo-Saxons are concerned, but even the casual visitor to Paris ought to know that it is not lost to the leading members of the Théâtre Français. Perhaps it is unnecessary to add that the proper manner of reading English verse and French is so distinct that the practices of a Mounet-Sully and of a Forbes-Robertson have, in fact, almost nothing in common save a regard for that part of tradition which is sound, and a respect for the poetry of the drama represented.

W.

New York, November 22.

GENERAL MEADE AT GETTYSBURG.

TO THE EDITOR OF THE NATION:

SIR: In your issue of November 18, 1909, you publish a most interesting letter from Mr. Jesse Bowman Young about the movements of Meade's army from and after Gettysburg. Permit me to add some remembrances of my own confirming his conclusions.

At the time of the battle of Gettysburg I was in Washington with a new regiment of infantry. The military authorities there were naturally much disturbed over the situation, and we were dispatched in great haste to join the army under Meade. Arriving soon after the battle of Gettysburg, I found our army encamped at or near a small town called Funkstown. I had previously served upon the staff of Gen. Sedgwick, who commanded the Sixth Corps, and I now called upon him. He received me kindly, and informed me that he had just returned from a conference of all the general officers, at which they had decided that it was then inexpedient to attack Lee, since

he had a force about as large as ours, and occupied a position for defence very much stronger than was our position for attack. Our army was so depleted by the three days' fighting at Gettysburg, losing 25,000 men killed and wounded, that my regiment of a thousand men compared favorably in numbers with almost any brigade that had been in the fighting.

Some years after the close of the war I saw Gen. Meade in Boston, and had an opportunity to ask him about the battle. He told me that, of course, he desired to attack Lee after Gettysburg, but regarded the risk as too great.

We were then making every effort to recruit the army by enlistment bounties and draft, but with no great success. Had we met with a disaster following what was called success at Gettysburg, the recruiting would have stopped entirely. Had Lee captured Washington, which was then poorly defended, the political, moral, and foreign effect would have been frightful, and the game of bagging Lee under such risks as these was not worth the candle. Of course, neither Gen. Meade nor any other soldier supposed that this was our last chance to fight Lee, and, if you remember, we won at last under Gen. Meade.

CHARLES L. PEIRSON,
Late colonel commanding Thirty-ninth Regiment Massachusetts Volunteer Infantry, and brevet brigadier-general.

Boston, Mass., November 22.

LACKS A PRESIDENT.

TO THE EDITOR OF THE NATION:

SIR: The British republic lacks a President. Is not this the moral of the legislative difficulty in England? If the King had a real veto, the budget bill might be sent back for reconsideration in a perfectly constitutional and unobjectionable way.

That the House of Lords needs complete change to make it a fair court of legislative revision cannot be doubted. But the objection to the present bill seems to be that under the guise of a fiscal measure it carries in it social and political change. This nobody who has read Mr. Lloyd-George's speeches can fail to see.

GOLDWIN SMITH.

Toronto, Can., November 24.

Literature.

BOOKS FOR CHILDREN.—I.

Gertrude W. Arnold has placed in a compact "Mother's List of Books for Children" (McClurg) titles to suit all ages from two to fourteen, the prescribed span of childhood, and, with the assistance of the supervisor of children's work in the New York Public Library, has given sufficient comment under each to characterize the story. The selection is suggestive, provided one is content to pass over the latest novelty.

In one volume, Charles Welsh attempts with a commendable amount of success to gather together "Stories Children Love" (Dodge), guaranteed by experts who have had opportunity for extensive observation as to juvenile taste. By as fair a system of grading as grading will allow, the editor makes "The Story of A Apple Pie" dwell amicably under the same glaring cover with Hawthorne's "Great Stone Face." Mr. Welsh keeps faith with his selections, but not so the editors of "Kipling Stories and Poems Every Child Should Know" (Doubleday, Page), who have in a single volume reduced the great storyteller to terms of one syllable and have shown no fairness because they give only a smattering to each class of reader. Undoubtedly they have some rich material here, but that is Kipling's fault; he cannot be harmed by the commonplace remarks at the head of the selections, printed in excruciating type, and serving as superfluous connective tissue.

Publishers may succumb to the popular demand, but they show feeling in special ways. Swift's "Gulliver's Travels" (Dutton), one of the eternal classics for children, comes to us embellished with delightful and delicate color drawings by Arthur Rackham; as a companion volume, he has likewise furnished illustrations for the Lambs' "Tales from Shakespeare" (Dutton), effectively sketchy in conception and perhaps on that account not as appealing to children as the edition of Lamb, with brilliant color plates by N. M. Price (Scribner). Rackham's volume of "Grimm," as imaginative as his "Midsummer Night's Dream" (Doubleday, Page) and as his "Peter Pan" (Scribner), has just been imported (Doubleday, Page).

For depth of imagination and for majesty of color, nothing exceeds Maxfield Parrish's plates for a group of "The Arabian Nights" tales, selected by Kate Douglas Wiggin and her sister, Miss Smith (Scribner). The editors' introduction is entertaining, and their work with the text seems to be carefully thought out.

One usually associates "Robinson Crusoe" and "Swiss Family Robinson" together, and deservedly so, apart from the conscious and successful imitation of the latter. This season they are both reissued with double guarantee of their perennial worth. E. Boyd Smith, whose brush and pen are exceptionally clever when not overtaxed, is part sponsor for "Robinson Crusoe," while the unnamed editor in a Publisher's Note (Houghton Mifflin) exploits the excellence of this "kitchen literature." W. D. Howells is beholden to the new edition of "Swiss Family Robinson" (Harper) for his first reading of the story, in order to write the introduction, wherein he makes the discovery that girls are as much entranced by this wrecked household as boys. Louis Rhead's illustrations are decorative and are not at all harmed by the fact that he made his sketches actually in the tropics.

The Lippincotts are to be commended for their holiday editions of such juvenile classics as MacDonald's "At the Back of the North Wind" and Ouida's "A Dog of Flanders." We remember no stories more satisfying than these, and, were it possible to establish a school of writing for children, there are passages in MacDonald we should like to use as correctives for "simple" style.

Ever welcome is Thackeray's "The Rose and the Ring," and especially so in the Stokes edition with such fine drawings as those by Gordon Browne. The charming *format* given to Mrs. Ewing's "A Flat Iron for a Farthing," by the Macmillan Co., will assuredly gain many new readers among whom appreciation will see certain subtleties quite absent in much of our recent writing for children. We prefer the quiet simplicity and quaintness of the cover design for this story to the pretentious color scheme for Rand McNally's edition of Miss Mulock's "The Little Lame Prince," which is nevertheless deserving of examination; the color work shows a certain excellence, though possessing little feeling. Certainly it is devoid of the old-time color which Cecil Aldin has caught for his pictures in Irving's "Old Christmas" (Dodd, Mead), a most commendable Yuletide gift in which our early American author presents his impressions of the rich English traditions.

There are very few Christmas books as such in our season's output. Such an anthology as "The Book of Christmas" (Macmillan), with its introduction by Mr. Mabie, is in some ways striking evidence of our fragmentary hold upon the healthy legendary spirit that educators are driving out, along with Kris Kringle. That is why, apart from the undoubted appeal of Norman Duncan's "The Suitable Child" (Revell), which tells of an orphan boy's Christmas eve on an express train, we welcome his cry against those whose ethics would steal from childhood an atom "of innocent delight."

There is no end of picture books for the youngest readers; the parent, we hope, has a natural antipathy toward the glaring supplement style which we were surprised to find adopted by *St. Nicholas*, when Denslow's pictures and verses, now gathered together in book form, under the title, "When I Grow Up" (Century), ran as a serial. The "ambitions" savor, both in observation and in imagining, of the Sunday comic section of the newspaper. In direct contrast comes the modest and distinctive description of "The Animals in the Ark" (Duffield) from the French of P. Guizou, with Vimar's delightfully humorous sketches.

In "The Circus," which is a fairly attractive oblong book issued by the Stokes, E. Boyd Smith shows a decided falling off from his Santa Claus of last year, and from his initial volume recording the fun in Noah's Ark (Houghton). When his brush becomes literal, it loses its felicity. His humor is usually reached through his "asides," and he loses his own facility in trying to keep abreast of three rings in a "faithful" manner.

The Walter Crane picture book, "The Song of Sixpence" (Lane), contains three sets of remarkable drawings by that superior nursery illustrator. The "fairy ships" launched by him bring joy to more eyes than those in the curly heads of youngsters. Of grosser nature, though purporting to have refining effect, Gelett Burgess's "Blue Goops and Red" (Stokes) illustrates the power of conversion whereby the naughty blues are changed into model reds. We fear Gelett Burgess will soon reach the extreme limit of his manners. B. Cory Kilvert's "The Kite Book" gives sufficient adventure (Dodd, Mead) to please the youth needing stimulus, and what the artist lacks in fine humor he counteracts by action sufficiently exciting. He has done better work, and we have seen color plates more exactly registered on the press.

There are two volumes of somewhat similar character. Millicent Sowerby's "Yes-

terday's Children" (Duffield) is sentimentally charming, while Jessie Willcox Smith's "Seven Ages of Childhood" (Moffat, Yard) is up to this artist's average level. What strikes us as most distinctive about the latter volume, is the verse by Carolyn Wells, with a flavor of excellence rather unexpected, where verse is made to order.

Publishers have different ideas regarding what constitutes the complete Mother Goose. The Stokes edition, claiming distinction on account of Miss Betts's illustrations in color, differs greatly from the large book which is issued by the Dodge Publishing Company. This latter volume, according to the title page, is edited by Walter Jerrold, the same who is responsible for that remarkably sumptuous "Big-Book of Nursery Rhymes" (Dutton), which all children should either have or see. Let us beseech the Dodge Co. to be careful hereafter with their cover designs! This "Mother Goose" is copiously and well illustrated by John Hassall, though he is hardly to be compared with Charles Robinson in his grace and easy use of lines.

The field of biography shades from collections of short accounts, to individual life stories; from individual effort dependent on character, to fame based on historical importance. Unlike Mrs. Wiggin and Miss Smith, who seem to have a monopoly now on all types of folk-lore, and who this year continue their "fairy literature" with "Tales of Wonder," the fourth in a series (Doubleday, Page), Mr. and Mrs. Andrew Lang find it necessary to turn to the heroic in real life. Still retaining their rainbow enthusiasm, they call their newest product "The Red Book of Heroes" (Longmans, Green), in which are presented satisfactory accounts of such figures as Palissy the Potter, the Marquis of Montrose, and Florence Nightingale. The publishers have adopted a *format* altogether rich in general effect.

The individual "lives" narrow down in number to four with any special distinction. Prompted by the same commendable intent which marked her "Boys' Life of Lincoln" (Century), Miss Helen Nicolay has written in similar vein her "Boys' Life of Grant." Mrs. Laura E. Richards, chosen by the Appletons to prepare a story of "Florence Nightingale" for young people, succeeded in making a slim volume, which, if it is slightly marred by a certain condescending style, nevertheless accomplishes a difficult and delicate task with much skill. From the Appletons, also, there comes a more youthful and appropriate biography of "Louisa May Alcott" than Mrs. Cheney's "Life and Journal," which has, up to the present, been the only available record of this great author's career for children to read. Miss Belle Moses has written this very direct and sympathetic book, and she has pleasantly and simply accentuated the charm of the woman whose charm is so easily felt in "Eight Cousins" and "Little Women." Frederick A. Ober continues his "Heroes of American History" (Harper) by writing, with his customary fullness and picturesque knowledge, an account of "Sir Walter Raleigh."

What one might well take to be a human record is the volume compiled by Miss M. G. Humphreys from Catlin's "My Life Among the Indians" (Scribner); it is a book which boys will welcome heartily as being stranger than fiction, however careful the fact. The illustrations are from Catlin's drawings.

Biography readily shades into history and into literature. Francis Jameson Rowbotham's "Story-Lives of Great Authors" (Stokes) introduces seven men in a pleasing and anecdotal manner, while the illustrations by their imaginative character serve to decorate the text. Agnes Carr Sage's "The Boys and Girls of the White House" (Stokes) sweeps over all our administrations in an interesting style, and mingles history and diplomacy with the home life of "Presidential children." John T. Faris's "Winning Their Way" (Stokes) is modelled along the line of Samuel Smiles's "Self-Help"; it is more definitely arranged according to special activities, and gives to each subject considerable space.

We may reach history through the suggestive "Decisive Battles of America," modelled by the editor, Ripley Hitchcock, on books of similar character, though not of equal thoroughness; it is an appropriate companion to Creasy's book (Harper). The chapters are indeed ample in scope, and each one is prepared by a specialist; this type of book, carefully planned, with adequate maps and full index, is one that teachers as well as the layman should welcome. Tudor Jenks, also, in "When America Won Liberty" (Crowell), has written a very satisfactory account of this country's struggle for independence; he has done this in no stereotyped spirit, but has applied the excellent method of viewing a movement or an event in perspective, of picturing the *force* primarily, and of stating the fact secondarily. An age *lives* if treated thus.

HISTORY OF THE HARVARD LAW SCHOOL.

History of the Harvard Law School and of Early Legal Conditions in America. By Charles Warren. 3 vols. Illustrated. New York: Lewis Publishing Co. $25.

In these volumes, with only two of which we have to deal, the third being a catalogue of past members of the school, Mr. Warren has construed liberally the duty of an historian of the Harvard Law School. The result is that, while the history appeals most strongly to the interest of those who have been connected with this particular institution, it has nevertheless a not inconsiderable value for any member of the profession interested in legal history and legal education in America.

The first dozen chapters, comprising approximately half of the first volume, give a brief history of the early American bar. A short chapter suffices for the consideration of New England Law and Lawyers in the Seventeenth Century; this is followed by a somewhat fuller account of the law and the lawyers in all of the colonies during the eighteenth century, while The Bar and the Law, 1789-1815, especially the Massachusetts bar, receive adequate attention. An interesting account is given of legal education in the eighteenth century, of the early law professorships, the first of which in America was founded at the College of William and Mary in 1779, and of the influential Litchfield Law School started five years later Mr. Warren has also a word to say on the lawyers and the law of England during the seventeenth and the succeeding century; he calls attention to early American barristers and bar associations, and to the early American law books; and he points out the obstacles and prejudices which, from the Revolutionary War to the founding of the Harvard Law School in 1817, worked against the growth of the bar and the development of legal studies as a science. These early chapters, with another picturing Cambridge and Harvard College in 1817, are a fitting introduction to the history itself.

The first law professorship in Harvard College was established in 1815, when Isaac Parker, Chief Justice of Massachusetts, was chosen Royall professor. His inaugural address, delivered in the following year, contained, to quote Mr. Warren, "the first suggestion ever officially made at Harvard for the founding of a separate school of law." Asahel Stearns was appointed University professor of law. He began with one student, and five more entered the first year. The first degree of LL.B. was not conferred until 1820. Mr. Warren's history of the Law School falls, naturally, into half a dozen periods, beginning with the decade or so when the school was under Professor Stearns. The almost complete failure of the school—there seems to have been but one law student in the spring of 1829—Mr. Warren does not lay at the door of the hard-working professor; he attributes it rather to "the expenses of life at Harvard, the lack of a proper building for the school, the prejudice in States outside of New England, as well as within, against the supposedly ultra-Unitarian proclivities of Harvard, the depressed conditions of the national finances during many of the years 1817-1829, and especially the rise of other law schools more conveniently located." The endowment of a law professorship by Nathan Dane within a couple of months after Stearns's resignation led to the immediate appointment of Joseph Story as Dane professor. During the same month the Royall professorship, which had remained vacant since the resignation of Judge Parker two years before, was filled by the election of John Hooker Ashmun. These two appointments set the Law School on its feet again. Furthermore, Ashmun's untimely death in 1833 necessarily brought Story into closer relations with the school.

Ashmun's successor as Royall professor was Simon Greenleaf. With his appointment opens one of the most brilliant and interesting periods in the his-

tory of the Harvard Law School—the twelve years ending with Story's death in 1845. Dane Hall had been completed in 1832. The number of students grew during these years from about forty to one hundred and fifty; the school became increasingly national in character. It was prosperous financially. The school was in "full blast," as Story expressed it; and though he himself was in Washington part of the time—"sick at heart and longing for the quiet of home and for a good and substantial reason for resigning the bench," as Greenleaf wrote to Charles Sumner, and though the burden of carrying on the school was not light, both professors worked with enthusiasm. Story was an enthusiast, and, for all his discursiveness as a lecturer, fired his students with something of his own spirit. Greenleaf, on the other hand, was concise and clear, confining himself closely to his subject. "Story," writes a student of the early forties, "magnified the civil law and told us of the indebtedness of the world of law to it. Greenleaf magnified the common law and told us of its superiority over the civil law." The completion of an addition to Dane Hall was celebrated in July, 1845, shortly before which time an arrangement had been made whereby Judge Story was to resign from the bench and give his whole time to his Law School work. His death occurred, however, before this plan was carried out.

What Mr. Warren terms the transition period lasted from 1845 to 1850. To fill the vacancy left by the death of Story, Greenleaf was transferred from the Royall to the Dane professorship, and William Kent, son of the ex-chancellor, was appointed Royall professor. This position he held only one year, and Joel Parker, Chief Justice of New Hampshire, was chosen his successor. Greenleaf's ill-health brought about his resignation of the Dane professorship in 1848. Rufus Choate declined the appointment, and Theophilus Parsons was made Dane professor.

In the period between the resignation of Greenleaf and the appointment of Langdell in 1870, Joel Parker, Parsons, and Emory Washburn, chosen University professor in 1856, were the chief figures in the school. In spite of the high standing and distinguished ability of the members of the faculty, considerable dissatisfaction had arisen with the condition of the school during the sixties. The resignation of Professor Parker in 1868, and then of Professor Parsons, foreshadowed a revolutionary change in the methods of instruction. Parsons's resignation was accepted in January, 1870, and on the same day, C. C. Langdell was appointed Dane professor. To quote Mr. Warren, for the first time in the history of the Harvard Law School there was chosen as professor "a young man of no legal reputation (except among the few lawyers who had employed him), a man of no national fame, and a lawyer who had had substantially no court practice." What this appointment accomplished for the Harvard Law School and for legal education Mr. Warren shows in his last eight chapters, covering the administration of Professor Langdell from 1870 to 1895, and of Professor Ames from the latter date to the present time.

Of especial interest is the account of the decade between 1871 and 1881, when the case system and the stricter requirements of the school were on trial. The final chapter sums up the influence of the Harvard Law School and of the case system. The system is well described by Prof. J. B. Thayer:

> The Case System at Harvard is not a method or system of teaching. It is a system of *studying* law. The whole essence of the Case System as we understand it at Harvard is that instead of placing in the hands of a student a text-book on which he has to prepare himself for the exercises with the instructor, there is placed in his hands a very carefully chosen series of cases selected by an expert, and he is expected to prepare himself upon them. The whole essence of the Case System lies, then, in this preparatory study of the subject in hand by very carefully selected cases.

Interesting, too, is the sketch, quoted from Professor Beale, of Professor Langdell as a teacher:

> When we entered his lecture room, we were struck by the massive intelligence of his brow. We admired his severe and almost impassive face, and we seemed to find the quiet, intellectual atmosphere of the cloister. In our time, as a result of his failing sight, he never used the Socratic method in his teaching. He simply talked, slowly and quietly, stating, explaining, enforcing, and reënforcing the principles which he found in the case under discussion. Our note books read like his articles on Equity Jurisprudence; quiet, forceful, full of thought, and requiring close study to follow them. Only now and then, when some subtle point was raised by Judge Mack or Professor Williston (not then judge or professor), his face would light up, and he would think aloud, to the vast delight of those members of his class who could follow him. Those were halcyon days. And once in a great while, something would amuse him, and he would throw back his head with a laugh that seemed to have the full strength of his mind in it.

When it is remembered that there are no official law school records before 1870, so that for the official facts relating to the school between 1817 and 1870 it was necessary to go to the Harvard archives in general; when, moreover, one notes the large number of extraneous sources from which material for this history are drawn, the great amount of research and labor which Mr. Warren has given to these volumes is apparent. On the whole, he has done an excellent piece of work, of permanent value in spite of occasional inaccuracies, such as referring to Prof. J. B. Scott as a former dean of the Law School of Columbia University; giving to genial Dr. O. W. Holmes the title of Reverend; alluding to Col. Shaw of Fort Wagner fame as Robert *Quincy* Shaw, and to the Georgia statesman as Alexander *F.* Stephens. Unfortunately, however, the errors chargeable to the publishers, rather than to the author, are glaring and inexcusable. The first volume is prefaced with two pages of errata; but a careful reading of these volumes discloses almost as many more errors of which no correction is made. It is seldom that a book comes from the press with more, or more exasperating, typographical faults.

Very unsatisfactory also, both in form and in matter, is the third volume an "Alumni Roll" of the Law School, for which Mr. Warren disclaims responsibility. The illustrations, mostly portraits, are poorly done. In view of the somewhat authoritative way in which a history like this is almost necessarily brought to the attention of former members of the institution for their support, one wonders whether there is not a certain quasi-moral obligation on the part of the authorities of the school to guard against the shortcomings of a publisher, which, in the present instance, have resulted in lessening to an appreciable degree the value of the work.

CURRENT FICTION.

Options. By O. Henry. New York: Harper & Bros.

O. Henry's determination not to be recorded in literary annals as the prophet of any particular "section" is emphasized by his latest offering. In "Options," he has brought together stories of New York, Pittsburgh, Georgia, Texas, South America, and the Philippine Islands. Notice of his recent volumes must take account rather of his discovery of fresh scenes and actors than of any marked difference in his approach or development in his highly sophisticated technique. Yet in this collection, there are symptoms, perhaps, of a faint and timorous movement toward romance. Of course, romance must be understood in the earlier Kiplingesque sense—a touch of fine passion or idealism in the day's work. Love is allowed to figure somewhat seriously here and there; but it must still be dealt with brusquely, curtly, and with a touch of ironic disdain befitting the hotel veranda, or the smoking-car.

For the rest, O. Henry remains his familiar self. His unrivalled "timelliness" as a writer of fiction may be suggested by the title of one of these stories —"The Higher Pragmatism." The humor which rises from the juxtaposition of the remote and the immediate can scarcely go further than his comparison of the beauty of a Texas sheep-ranch-

man asleep to that of a "cab-horse leaning against the Metropolitan Opera House at 12:30 A. M., dreaming of the plains of Arabia." Nor can much advance be expected upon the artifice of construction which makes "No Story" in reality no story till within a dozen lines of the end, where it suddenly becomes, *ex post facto*, as the author might say, an extremely dramatic incident, and forces the reader to think it all through again. Structural cleverness is O. Henry's darker angel. A sounder impulse is at work in "The Rose of Dixie," which is concerned with an unsuccessful attempt made by T. T. Thacker of New York—who is everything that his name suggests—to boost and hustle a Georgia literary magazine into a paying investment. Here the interest lies in broad type-caricature, sectional contrast, and keen yet genial and equal-handed satire of the confronted Northern and Southern foibles. In a land of highly-diversified provinces, this is a vein worth working; and O. Henry's command of many different local colors is an excellent qualification for the task.

Bella Donna. By Robert Hichens. Philadelphia: J. B. Lippincott Co.

After his holidays in the Mediterranean, Mr. Hichens has returned to his bailiwick, or thereabouts. The Nile supplies his scenery, the atmosphere is laden with mysterious scents and cries of the East. He again extends his powers to demonstrate that the East is not what the Cook tourist imagines, and that the "Easterns" are a queer lot. And the demonstration is again prolonged by that process of verbal repetition and attenuation which belongs to those arch-compellers of the inattentive mind, Mr. Caine and Mr. Hichens. Nothing is taken for granted, nothing left to the synthetic or analytic intelligence of the reader, everything is "rubbed in" deliberately and remorselessly. The purely narrative portions of the book might be condensed to a few pages. It contains much less description than "The Garden of Allah" and its successors. Nine-tenths of the space is given to dialogue and the detailed rehearsal of the thoughts and feelings of three of the four characters. These are: a typical youngish blond Englishman named Armine, whose work is the reclaiming of desert lands in the Fayyum; a fashionable London physician of Jewish blood, and a loose woman who has dropped from the great world to the half-world, and finds herself, at forty-two, dangerously near the end of her powers. She succeeds in appealing to the pity and chivalry of Armine, and marries him in virtual defiance of the physician Isaacson, who is the victim's most intimate friend, and perfectly understands the woman's character and motives. The pair set out for Egypt, and on the way fall in with a Turco-Egyptian, Baroudi, who turns out to be a great person in Cairo and throughout Egypt. "Bella Donna" is already tired of her romantic husband; she and the Oriental understand each other at a glance. Soon after he reaches Egypt Armine's chances of succeeding to a title vanish, and with them the chief guarantee of Bella Donna's respectability. She gives herself secretly to Baroudi, and they plan to dispose of Armine by slow poison. Stray bits of information come to Isaacson in London which make him suspicious, and he hurries to Egypt to find his friend almost *in extremis*. He rescues the husband and unmasks the wife, who is forthwith cast off by her Egyptian lover as an encumbrance.

This, it will be seen, is more direct and forcible than the usual plot of Mr. Hichens. Its treatment, morever, seems to depend less obviously upon an artificial high flavor. It has less of that subtle prurience in which prudish minds delight. As for the persons, they are more nearly "convincing" than any of Mr. Hichens's previous creations—three of them, at least, for Armine is little more than a puppet. Baroudi in particular (perhaps because he says so little) approximates the dignity and solidarity of characterization which Mr. Hichens (again like Mr. Caine) calls upon us so loudly and so vainly to connect with all of his proper names.

John Marvel, Assistant. By Thomas Nelson Page. New York: Charles Scribner's Sons.

This story is written in that florid and ingenuous style which yet survives in Dixie. The hero and supposed narrator is a youth named Glave, for whom Mr. Page evidently cherishes an unaffected regard, but who to the cold Northern eye seems a good deal of a cockscomb, not to say cockerel. He spouts, he swaggers, he takes offence at the least fancied infringement of his personal dignity. We first become acquainted with him at college, where he signally neglects to distinguish himself, except as a beau and blade upon a somewhat antiquated model. Thereafter he becomes a lawyer, nearly briefless for a long time. He makes enemies among the powers, social and political, by refusing to truckle to them. They can do him no real harm; his rise is slow but sure; and having fallen in love with a daughter of the plutocracy, he is in due time made blest. Throughout his adventures he is accompanied, at nearer or farther remove, by a darky and a dog, persons who afford a good deal of mild diversion by the way. The perpetual drunkenness and dishonesty of said darky are regarded by Glave as necessary and even amusing characteristics of an inferior creature, while the impudence of a Pullman porter rouses him to lynching fury. The firmness of Glave's conviction that he is a gentleman is continually goading him to a violent attitude toward such as do not give him all possible elbow-room.

To say the truth, Glave is a not desirable survival of the Southern fire-eater. It is rather tedious to have him and his equally conventional "Angel of Lost Children" so much in the foreground. The other persons of the story —Leo Wolffert, Jew and Socialist—John Marvel, the Christ-like young parson, "assistant" to whomever he might find in trouble—are of far greater interest. And the multiplicity of minor characters and scenes gives an effect—kaleidoscopic, perhaps, rather than panoramic, but certainly a vivid presentation—of various aspects, social, moral, and political, of current American life.

The Big Brother of Sabin Street. By I. T. Thurston. New York: Fleming H. Revell Company.

Those who have read the story of "Theodore Bryan, the Bishop's Shadow," will remember that he was a little guttersnipe of Boston, who, falling in with "that great bishop that everybody loved," set himself "to live as he thought the great man would have wanted him to live." Such readers will be interested to meet young Bryan again, now a Harvard graduate, giving himself heartily to the work of redeeming young toughs, and to the "cleaning up of Sabin Street." It is a story of settlement work with a leaning to rosy accomplishment, but with rather less than usual of the sickly impracticality of philanthropic fiction. Bryan's temporary loss of courage, Marjorie's repugnances, the boys' obstinacies, and the girls' wilfulnesses, furnish a reasonable number of pricks to kick against. It depends on the personal equation whether any given reader shall find it rather grown-up for a boys' book, or rather saccharine for adult taste. But of its fine aspiration and healthful import there can be no question.

DIPLOMACY.

American Foreign Policy. By a Diplomatist. Boston: Houghton Mifflin Co. $1.25 net.

Our recent acquisitions in the Caribbean and the Pacific are a source of military weakness. Hence we should fortify ourselves by a comprehensive and thoroughgoing diplomacy. Such, in brief, is the main thesis of this book. In particular, the Monroe Doctrine, since our expulsion of Spain from two oceans, has lost all moral prestige, and now carries no further than our guns. Here again diplomacy, by securing the adhesion of possibly interested Powers to the Doctrine, might reduce the chances of war. In general, the writer is a believer in friendly understandings as opposed to treaties. There can hardly be

too many. Each is in its measure a guarantee of peace. On the part of the United States he advises foresight and a prompt adjustment of all outstanding issues.

Our first step towards assuming our due position in the world should be an *entente* with England:

> While no incentive for hostility exists on either side, with no other Power would the advantages of an understanding be so great or the liabilities so small. England controls the key of the situation for us both toward the Continent and toward Japan. Under existing circumstances were she unwilling, no power could menace us. Nor are such circumstances likely to alter so long as the Continent remains divided. To guard against this (*sic?*) is the primary object of British diplomacy, and her present guarantee against a united Europe lies in the understanding with France. What France is to England England is to us. Hence the preservation of the Anglo-French understanding, and in smaller degree the understanding with Russia, concern us only a little less than the main participants.

This programme obviously opens up too large a matter to be discussed in the space allotted for a review. Speaking broadly, something like the above suggested *entente* seems possible, even desirable. Whether either England or ourselves would gain by hurrying the day is questionable. One must consider the possible irritation of such Powers as Germany and Japan. In fact, understandings are by no means invariably the good which "Diplomatist" considers them. They may be causes of offence. We feel the mooted Anglo-American understanding may be more useful for the present as a potentiality than it could be as an actuality.

Our relations with the Latin republics of America are dictated largely by nearness and remoteness. At the earliest chance we should seek to secure the formal adhesion of the European Powers to the Monroe Doctrine. Evidently, we must give a *quid pro quo*, and here "Diplomatist" regrets that we did not take our slice of the Congo region, buy St. Thomas, take up our share of Moroccan bank stock—accept anything, in fact, that might advantageously be traded off. Diplomacy, to our author, largely reduces itself to such playing for points. To us such advice smacks uncomfortably of smoking-room world politics. If we are to count internationally, it will be precisely because we refrain from all meddling and small trafficking. Algeciras should have taught "Diplomatist" the weight of a disinterested attitude. Returning to the Latin Republics, the United States is obviously in a closer relation to the Caribbean Powers, so much so that we should formulate a definite "Caribbean policy." In this region we should exercise a firm protectorate; be prepared, if need be, to revise awards to European claimants, and prevent these republics from uniting among themselves or with Mexico. Here is a long order with a vengeance, though it is fair to say that between President Cleveland's arbitration at the pistol's point and President Roosevelt's Panama aggression, there is a precedent for pretty near the whole programme. "Diplomatist" nowhere attenuates policy with morals.

In the Far East, it is pointed out, our policy, in contrast with our usual habit of non-intervention, has been consistently an active one. Here there is little to regret except the partial alienation of Japan. How to deal with that growing and ambitious Power is one of the thornier problems of the future. In the matter of regulating yellow labor we should stand in with the British colonies, Canada, New Zealand, and Australia, by exchanging with them consuls-general diplomatically accredited. Yet in offering this united front, we should avoid giving a common grievance to Japan and China. To keep them apart should be our effort. It is suggested that we might play Russia off against them both, but to us such a move seems perilous, and calculated to unite the two Far Eastern Powers.

An underlying levity in this book appears nowhere more plainly than in the chapter on the Near East. No one will be surprised that the United States must be represented in the next session of the Berlin Congress. So far, so good. But when it is suggested that we should establish commercial spheres of influence in Asia Minor and beyond, which shall incidentally serve as buffers between England and Russia, the conviction grows that certain portions of the volume were improvised on the steamer between smokes.

What is said about the reorganization of the State Department, with territorial under-secretaries, is sensible, as is the counsel that closer relations should be maintained with the Senate, preferably through a special Congressional secretary. Whoever is able to detect the occasional admixtures of wide speculation and sheer nonsense in this vivacious book may use it safely and with profit.

Inchiesta sulle Condizioni dell' Infanzia in Firenze. Eseguita per incarico della Giunta Comunale dal Prof. G. Mya.

This report includes a detailed study of the vital and health statistics of children under ten years of age during the years 1905-7; a concise statement of the scope and interrelations of the various institutions, public and private, for the relief and protection of children; a consideration of the topographical distribution of the chief contagious diseases (illustrated by an admirable map); an examination of the actual working of the recent maternity law for factories and workshops; and, finally, recommendations of measures for checking the enormous waste of human life. The statistics show the influence upon health of age, taken by months during the first year of life; of birth, legitimate or illegitimate; of seasons of the year; of surroundings; of the health and habits of parents. The diseases of above six thousand children were studied in relation to the health of their parents. The results emphasize the striking connection between parent and child not only in tuberculosis, but in alcoholism, diseases of the nerves, and a few other abnormal conditions, and furnish additional incentive to the fight against these evils. Yet infant mortality is not relatively high in Florence, being 14.4 out of every hundred births for children under one year of age, whereas in Chicago (the only American city cited) the percentage was 26.7 in the corresponding year, 1907.

A general law passed in 1907 requires factories and workshops employing women to permit mothers of nursing children to leave the factory at fixed hours under well-defined conditions, in addition to the usual hours of rest established by law, or to provide a special room attached to the factory for their use. The provision of such a room is obligatory wherever more than fifty women are employed. The state law also requires a certificate of health from a physician before a woman is admitted to such establishments. Employers in Florence appear to have complied readily with these provisions, but through inconveniences of location, distance from residence, the difficulty, the expense, or loss of time in having the child brought to the factory, the law has failed in large measure of the desired effect. The traditional employment of wet-nurses, even by the very poor, and the consequent habit of both communal and charitable institutions of making grants of money for this purpose, and even of supporting the children of the very poor during the nursing period in the Foundling Hospital, have contributed to defeat the law's intention. Its logical development would seem to require not only a room, but all the adjuncts of a day nursery to be attached to every workshop.

While some of the recommendations of this report apply to purely local conditions, the general trend of its conclusions includes important truths. All the statistics show that the maximum of mortality and disease occurs in the first year of life, and that disease is most prevalent during the nursing period. The effects of the illnesses of this period extend throughout life; and where the highest rate of infantile mortality prevails, occurs also the maximum of delinquency, especially of delinquent children. The protection of the newly born and the nursing child is a duty of the community and

should be exercised as one of its chief public services, not left to private philanthropy, which is not always well-directed and rational, and which ends almost inevitably in recourse to public funds. The city spends a considerable sum annually for a milk fund, and, as already stated, in other measures for the nurture of infants, in addition to their care in hospitals. Experience, illustrated by these statistics, has proved that this money is badly spent with no security that its purpose will be attained. The report, therefore, among other things, recommends that the Commune, following the example of Milan, Rome, and many French and German towns, should appoint, in connection with its Health Department, a special medical service whose duty shall be to pass upon applications of women, demanding grants from the milk and similar funds, and especially to visit at frequent intervals and inspect the nourishment of all those young children, wherever placed, who are supported wholly or in part by public funds and charities. The report appreciates the importance of model tenements but overlooks the value and the obvious need in Florence of public playgrounds and well-distributed, accessible public parks.

History of Scotland. By P. Hume Brown. Vol. III: From the Revolution of 1689 to the Disruption, 1843. New York: G. P. Putnam's Sons. $1.50.

This is presumably the last instalment of a work which has received recognition on both sides of the Atlantic as the soundest and most trustworthy history of Scotland produced by modern scholarship. The field here covered, 1689 to 1843, especially the latter part of it, does not offer an opportunity for picturesque narrative equal to that dealt with in the two earlier volumes; for it is primarily an age of secular and commercial interests. On the other hand, it affords fresher material than any other stage of the national development; for books dealing with Scottish history since the union of 1706 otherwise than as a side issue of the general history of Great Britain, are still exceedingly rare.

The story opens with an account of the reëstablishment of Presbyterianism in Scotland after the arrival in England of "Dutch William." The admirably temperate and scholarly account of the Massacre of Glencoe deserves a special tribute: "Had it occurred at any period previous to the Revolution it would have been accounted merely as another of the long list of atrocities that are recorded in Highland history." Its exaggerated prominence to-day is to be attributed to the fact that it was the first of a long series of similar outrages to be made the subject of a regular investigation, the demand for which is to be traced rather to personal hatred of Dalrymple, the Secretary of State, and a desire to discredit the Government, than to any awakening of the public conscience. The Scots Darien scheme, of which much has recently been written, next claims Prof. Hume Brown's attention. He discerns in that commercial enterprise a significant illustration of the profound change which came over the national spirit in the end of the seventeenth century, and transformed the Scots "from a nation of theologians into a nation of traders and merchants and economists." The author here strikes the note that remains dominant throughout the remainder of the volume. Commercial and industrial considerations are really the determining factors at all crises of the national history henceforth. "Trade," as Fletcher of Saltoun remarked, "is now become the golden ball for which all the nations of the world are contending." It was for the sake of trade, at the last analysis, that Scotland accepted the Union in 1706, though that acceptance entailed a sacrifice of institutions with which her independence as a nation was inseparably bound up, a sacrifice to which only the instincts of self-preservation could eventually have reconciled her. Occasionally—as in "the 'Fifteen" and "the 'Forty-five," when the Stuart Pretenders were on hand to fan the flames—the old spirit of independence flared up, but the successful repression of these two revolts merely served to establish the new order of things more firmly than ever. The half-century in the history of Scotland that followed "the 'Forty-five" has been described by David Masson as "the period of the most energetic, peculiar, and most varied life"; and foreign observers, at least, would endorse the statement:

> During that period Scotland made her largest contribution to the world alike in the sphere of speculation and practical ideas; in literature, in philosophy, in economical science, she may then fairly claim to have been a pioneer in the opening up of new possibilities for the future of nations. Commerce and the modern spirit had vanquished the Stuarts and the political principles which they represented, and they had concurrently overriden the theocratic ideals which had been the bequest of the Reformation.

With the dawning of the French Revolutionary era, Scotland, like other European countries, entered a new phase of her national life: from revolt against the "despotism" of Henry Dundas, she was soon launched upon the struggle for Parliamentary reform. The last two chapters, on the meaning and results for Scotland of the great Act of 1832, and the "Disruption" in the Scottish Church which occupied the succeeding decade, are somewhat weary reading, and, perhaps inevitably, in the nature of an anti-climax; but it is a period of history which it is difficult to make thrilling. Some surprise and regret will be occasioned by the author's apparent resolve to follow the example of the Oxford history schools (at least until very recently), and break off before the middle of the nineteenth century. For what Prof. Hume Brown has given us, however, we are truly grateful, and we gladly add that his last volume, though covering what in our estimation is a far more difficult field, is thoroughly worthy of the high standard set by its predecessors.

The Philippine Islands. Edited by Emma H. Blair and James A. Robertson. Vols. LIV and LV. Cleveland: Arthur H. Clark Co.

The thousands of entries which, in two large octavo volumes, make an analytical index of 968 pages, together with a bibliography of 419 pages independently indexed, display the wealth of the fifty-two volumes of text in this now completed work upon the Philippine Islands, consisting, in the main, of translations from Spanish official reports, together with many of the originals on the opposite pages. These volumes treat, one may add, of almost every conceivable subject that has concerned the Philippines, from the earliest times until the American occupation. They are very rich, for instance, in relation to the Chinese colonization within those limits, and, indeed, concerning southern, or Cochin, China proper. No element of public life seems overlooked, and they expose many of the minutest details of domestic manners. These materials begin with the bulls of demarcation by Alexander VI in 1493 and close with the famous Friar Memorial of 1898, dated barely a fortnight before the fateful first of May.

Notwithstanding its bulk, this thesaurus does not claim completeness; but it is by far the most distinctly first-hand and serviceable English collection to which the student of the Philippine past may turn. Even more valuable in its way is the prodigious bibliography, which accounts for a vast mass of manuscript and printed material in public and private hands. Besides instructive notes appended as required, the volumes are enriched with a liberal historical introduction by Professor Bourne of Yale, and with acute bibliographical notes by James A. Le Roy, an officer of the Philippine Commission when it was engaged in establishing civil government in the islands. It is particularly noteworthy that Le Roy in many particulars discredits Foreman, who has been regarded as the best informed and most impartial writer upon these debatable people and their ways.

Reviewing these original papers and making all allowance for the interested reports of the religious who zealously

accompanied and encouraged the *conquistadores*, and of the official "relations," upon both of which so much of our knowledge is based, we must admit that the non-Mohammedan tribes were distinctly raised to and maintained upon a much higher plane by the Roman Church than other Malays as a body have ever reached; and, moreover, as Bourne points out, the measures that influenced them were quite similar to those by which the Teutons, for instance, became technically, one may say officially, Christians. One evidence of their progress is the repression of tribal wars, and a vast increase in population has followed a more reasonable mode of life. Thus, from a probable half-million of natives at the time of the conquest, the Christians numbered 830,000 by the middle of the eighteenth century; at the beginning of the nineteenth a million and a half; in 1845 it was calculated that there were nearly 4,000 000, and by 1900 the estimate was 8,000,000 souls. Slavery, as we have known African slavery, was non-existent under the Spanish rule, although in the earlier days forced labor, practical bondage of the recalcitrant natives, and cruel treatment were common enough. A variety of feudal villeinage long prevailed, and a form of peonage for debt, hereditary as well as direct, is perhaps not yet extinct, depending upon traditional, not legal, obligation. However mixed the motives of their masters, these East Indian natives suffered no such atrocities as those of the West Indies; although at first armor and arquebuses opened the way for the cross, and the non-Spanish stock has, of course, been systematically treated as racially inferior. And notwithstanding that from our point of view there were oppression, official corruption, and that lethal overlordship of the state itself to which the Roman Church always inclines, nevertheless what may be called the soul of that communion and much of its working spirit were beneficent. Thus: "In provision for the sick and helpless, Manila at the opening of the seventeenth century was far in advance of any city in the English colonies for more than a century and a half to come." For instance, the Hospital San Juan de Dios in Manila intramuros, was in vigorous, although perhaps not perfectly efficient, operation at the exchange of flags in 1898, and had had a corporate existence for hard on 300 years. The Pennsylvania Hospital was opened in 1752, and the Massachusetts General in 1811, the first institutions of their kind in their respective regions.

This library of Spanish service brings out all sorts of curious information for those who are to develop in permanent shape the history of those days of the sword and the crucifix.

Penguin Island. By Anatole France. Translated by A. W. Evans. New York: John Lane Co. $2.

Jacques Tournebroche. By Anatole France. Translated by Alfred Allinson. The same.

These two books wear with unequal dignity their English dress; they well illustrate the difference between girding up one's loins for a *magnum opus*, and merely tossing off a few trifles in idle moments. Upon the merits of "L'Ile des Pingouins" the *Nation* has already made sufficient comment. It is one of the fullest, raciest, and most characteristic expressions of Anatole France's genius, and is likely to remain one of the satirical masterpieces of French literature. It deserves, therefore, a really distinguished translation. So far as we have observed, Mr. Evans's rendering is idiomatic and fairly graceful, but by no means accurate. For example (p. 122), "I perceive that thou art a living being among the shades, and that thy body treads down the grass in this eternal evening" is a very blundering version of "Je reconnais que tu es vivant à l'ombre que ton corps allonge sur l'herbe en ce soir éternel." Again, Virgil in Hell, having just declared that in life he kept to the golden mean—*rien de trop*—says: "J'ai fréquenté modérément le lit des femmes étrangères; et je ne me suis pas attardé outre mesure à voir, dans la taverne, danser au son du crotale, la jeune syrienne." Mr. Evans renders (p. 125): "I have, indeed, to some extent gone with strange women, but I have not delayed over long in taverns to watch the young Syrians dance to the sound of the *crotalum*." By introducing "indeed" and substituting "but" for *et*, the translator has made Virgil apologize for going with strange women, and so has quite spoilt the point of the passage. As both the text and the context show there is no opposition whatever between the two clauses; there is simply an emphasis of pride upon "modérément" and "outre mesure." On page 126, "nuées allégées" is translated "burdened clouds" instead of "unburdened clouds." More serious is the mistake (p. 125) of transforming past tenses of the verb into present, by virtue of which Virgil continues his diet of lettuce and olives in Hell! Furthermore, Mr. Evans takes unnecessary liberties with the length of M. France's sentences, breaking them up or combining them at pleasure.

"The Merrie Tales of Jacques Tournebroche" is an odd and rather unedifying mélange of mediæval drummers' stories masking as courtly tales very suave in their indecency, burlesque miracles, monkish tales pointed at the modern clergy, and idylls of innocent childhood. The risky stories are not very merry, nor, if we look upon them as weapons, can we regard them as very dignified instruments of attack upon the Church. The pretty little pictures of children are, on the whole, somewhat insipid. The only really piquant thing about the book is that Gallic lubricity and infantile sweetness are bound up together. The idea of such a union is perhaps original with Anatole France At any rate, it is quite in his vein. Yet it is hardly a great stroke of art. If the "Merrie Tales" had not pressed into English with the "complete works," it would have waited long for a translator.

Wendell Phillips, Orator and Agitator. By Lorenzo Sears. Doubleday, Page & Co. $1.50 net.

To most students of American history, Wendell Phillips is probably known chiefly, if not solely, as the orator of the anti-slavery movement, and it is in this capacity that Dr. Sears principally considers his public career. Beyond this, however, the book has the broader purpose of showing the relation of Phillips to the anti-slavery movement as a whole. It would, indeed, have been strange if, intimate as he was with Garrison and other abolition leaders, and singled out by circumstances and the power of his unrivalled oratory to expound and defend the doctrines and methods of the abolitionists to audiences of every degree of friendliness and hostility, he had not become more than the popularizer of other men's ideas; and it is one of the merits of Dr. Sears's volume that the attitude of Phillips as a leader is well brought out. Analysis of his almost innumerable speeches, and of his course in the proceedings of abolition societies, shows how unmistakable was his radicalism from the start. More than almost any man of equal prominence in his day, he represented the extreme view of the potential equality of the negro and the white; and in this view he seems never to have wavered. Naturally, therefore, slavery appeared to him, not as a temporary phase of advancing civilization, but as always and everywhere an absolute moral evil, to which neither laws nor the Federal Constitution could for a moment give sanction. Naturally, too, he was impatient of delay, scornful of compromise, intolerant of everything save whole-souled devotion to the cause of immediate emancipation, and largely indifferent to the historical episodes in the great struggle through which he was living.

Yet Dr. Sears's volume but confirms the judgment of impartial historians, that it is as an orator and agitator, and not as a thinker or organizer, that Phillips is entitled to be held in worthy remembrance. With the exception of his uncompromising radicalism, his extant speeches and writings afford practically no trace of original ideas on either

slavery or emancipation, while of constructive statesmanship he cannot be credited with even a rudimentary sense. It has been said of him with truth that he never knew that the civil war was over, but, unlike Garrison, insisted on continuing the anti-slavery agitation in organized form after slavery itself had ceased to exist. Never having known what it was to be beaten, he failed to realize that a victory had been won. But of the power of his matchless eloquence there was, even in his own day, general admission, his enemies themselves being judges. He had every endowment of the orator: a dignified and gracious presence, a musical voice capable of filling the largest hall, perfect command of himself and his theme, unerring apprehension of what was in his hearers' minds, a vast store of pertinent illustration and effective repartee, and exhaustless power of varying the treatment of his one great theme. Speaking for thirty years, and to hundreds of audiences, on the subject of slavery, no one ever complained that he repeated himself. No American ever faced so many hostile crowds, bent, often with the approval of the public authorities, upon denying him a hearing; yet he never failed to compel their attention once his voice could be heard above the din. As time went on, and he became conscious of his powers, he seemed to delight in hurling at his listeners at the outset his most extreme and irritating arguments, confident that the angry outburst of disapproval would later be turned to applause.

Dr. Sears's style suffers from an intrusive jauntiness, but it is at least clear and readable. For the thoroughness with which he has studied his sources, as well as for the skill with which he has avoided writing a history of the period instead of a life of Phillips, he is entitled to praise. The two chapters on the substance and form of Phillips's oratory are excellent examples of analysis and criticism.

The Moral Economy. By R. B. Perry. New York: Charles Scribner's Sons. $1.25 net.

Professor Perry's volume has the value and the limitations that belong to the work of those moralists who conceive the problems of conduct to be much like problems in mathematics. There is a little of the spirit of Jeremy Bentham in the book—of a Bentham of wider sympathies, more liberal tastes, and a more ornate and graceful style. Mr. Perry has, at any rate, the Benthamic freedom from cant, the same impatience of subtlety and sophistication, the same hearty conviction of the essential simplicity of ethical questions, and of the possibility of solving them in a certain exact and "objective" manner; it is merely necessary to define a primary, homogeneous unit of value and then apply "moral arithmetic" to the computation of the quantity of such units realized by a given mode of action. The author's fundamental doctrine, in short, is that moral differences are readily calculable, quantitative differences. His fundamental units, however, are not pleasures, but "interests" or "satisfactions of desires." One could wish that he had taken time to make clear the qualitative nature of these, and to establish their commensurability *inter se.* The problem of finding a "logical" ground for the obligation to seek the maximum good of all, even at the cost of absolute self-sacrifice, disturbs Mr. Perry less than it disturbed the utilitarians. To disregard others is to deny that their interests or desires are real—which is a statement contrary to the objective fact. Surely, regarded merely as logic, this confutation of the egoist is a little too simple, and involves some confusion of the judgment of fact with the judgment of worth. Sir Leslie Stephen once somewhat maliciously represented a certain English moralist as holding that the only reason why a man ought not to beat his wife is that he thereby untruthfully denies that she is his wife. Mr. Perry would appear to hold that the only reason why the man ought not to do so is that he thereby untruthfully denies that the wife dislikes to be beaten.

But whatever be said of the technical ethical reasonings of the book, its pervasive moral temper has a wholesomeness and balance and a freedom from the prevalent itch after paradox which make the volume eminently profitable reading for a perplexed and over-sophisticated age. As a college text-book, also, it has many excellences, and perhaps one serious defect. Those who would instil philosophy into the young barbarian at play must often first create in him the doubts from which he is to be delivered. From "The Moral Economy" it is not certain that he will get the impression that there are any real problems to solve or any debatable issues to discuss. He is likely to agree with its vigorous and persuasive affirmations altogether too promptly.

Motoring in the Balkans, Along the Highways of Dalmatia, Montenegro, the Herzegovina and Bosnia. By Frances Kinsley Hutchinson. With map and over one hundred illustrations from photographs by the author. Chicago: A. C. McClurg & Co. $2.75 net.

The peculiar charm of the region visited in the motor trip described in this book, making it in some respects the most attractive in Europe, lies in the fact that here sea and mountain combine to offer scenery of unparalleled beauty. It is also the meeting point of East and West, for village mosque and Christian church stand side by side, and the veiled Turkish lady leaves the harem to wander through the streets and bazaars with her Christian sister. Every variety of costume is to be seen, from the sheepskin coat of the Bosnian peasant to the scarlet and gold garments with coin necklaces and headdresses of the townswomen. Then, in addition, in the springtime a wealth of flowers and blossoms clothes the mountain-sides, and the air is vocal with the songs of larks, orioles, and nightingales. The start was made at Trieste, and the Dalmatian coast was closely followed to Ragusa. An excursion was made from this place to Cetinje, the capital of the little principality of Montenegro, and one of the most impressive sights was the "unpretentious, comfortable-looking, large, sunny," royal palace, the childhood home of the Queen of Italy and her three princess-sisters. The portraits of Prince Nicola and his wife are the most interesting of the illustrations.

Leaving the seacoast, the travellers crossed the mountain-chain of the Dinaric Alps, and Herzegovina and Bosnia. Vienna was the terminus of this trip of forty-eight days and 1,483 miles. Mrs. Hutchinson's narrative is largely taken up, as is natural, with the daily experiences, many of which are trivial and uninteresting except to the personal friends of the motorists. Too much stress also is laid upon the different costumes and the market and street scenes, which are often virtually repetitions of what has been said before.

The value of the book would have been much increased if some account had been given of the methods employed by the Austrian rulers in the development of the recently annexed provinces; how, for instance, the capital, with its large Mohammedan population —"there are over two hundred mosques in Sarajevo"—is governed. Instead of this, she simply says, "during the last thirty years under Austrian administration much has been done to sweep away the old order of things, to replace the Asiatic by the European, and the attempt has been lamentably successful." Some historical information is given, but the facts are not always correctly stated. Diocletian, for example, was not "born a slave."

The book's chief value is to be found in the information given as to journeys, whether by motor or by rail and diligence, through a country whose wonderful scenery and picturesque people make it a "continuous delight." There is an excellent map of the route on the inside cover, and an itinerary and table of distances give the names of the places stopped at and the hotels—which were excellent.

Notes.

Viscount Morley of Blackburn makes his first entry into the book-world since his elevation to the peerage in the collection of his "Indian Speeches, 1907-9," to be published by the Macmillan Co.

The late Gov. Johnson of Minnesota is the subject of a biography, written by Frank A. Day and Theodore M. Knappen, which will be published at an early date by Forbes & Co. of Chicago.

The Putnams are to publish in their Memoir Series a volume by Winnifred Cockshott, entitled "The Pilgrim Fathers," and presenting a comprehensive account of the Puritans throughout all their vicissitudes, from their emergence in England to the final absorption of the Plymouth Colony by Massachusetts in 1691. Accounts are given of the early Separatist movement, of the establishment of the church at Scrooby, of the persecutions that precipitated the migration to Holland, of the life of the Pilgrims in Amsterdam and in Leyden, and of their acquisition of new ideals, which were to be perpetuated in their new-world home.

"Lyrics of Life" is the title of Mrs. Florence Earle Coates's new volume of verse, announced for publication on December 4, through Houghton Mifflin Co.

Another book of verse to be published by Houghton Mifflin Co. is the collection of lyrics by Louise Imogen Guiney, in a special limited edition.

The Rumford Press of Concord, N. H., will issue, on December 20, a volume containing twenty-four addresses by William Jewett Tucker, former president of Dartmouth College. These addresses, delivered before educational or patriotic gatherings between 1893 and 1908, and discussing many of the responsibilities and problems of good citizenship, are entitled, collectively, "Public Mindedness."

The Harvard Library has received as a gift from Prof. A. C. Coolidge and C. L. Hay, a recent graduate of the college, a collection of four thousand books, principally on Spanish-American history, from the library of Señor Luis Montt, of Santiago, Chili.

On November 4, occurred the reopening of the courses of the Sorbonne, at Paris. The dean of the Faculty of Letters, Alfred Croiset, announced to the assistance, in the Amphithéâtre Descartes, that among the new courses would be a series of public lectures on "American Men and Things," to be delivered in English by Prof. Bliss Perry. There are registered at the Faculties of Letters and Sciences, this year, 2,957 students, against 2,854 for the preceding year. Of these, 1,150 are foreigners, and more than half of the last number, Russians.

The Société des Amis de Victor Hugo will place a bust of the poet outside the farmhouse of Papelotte, near the Waterloo battlefield. Here Victor Hugo wrote a great part of "Les Misérables."

"Leaves from a Madeira Garden," by Charles Thomas-Stanford (John Lane Co.), is a series of rambling chapters concerning the writer's gardens—and their setting—in Madeira. The book is very pleasing. Lacking the time and money for a trip to the island, one cannot do better than to see it through the eyes, quizzical yet sympathetic, of this easy-going observer. His book is by no means confined to gardening; he speaks of history, scenery, politics, the plague, and old furniture—the latter in such terms as to make us envious. A Chippendale chair (to be sure he puts it in quotation marks) for twenty-two shillings! But the best remarks in the book are of the gardens, their beauties, difficulties, gardeners, and climate. A genuine service of the author is to express, in the following sentences, what we all have felt. "It is sad that one of our finest roses here should bear the prosaic name of William Allen Richardson," he writes. "Herr Druschki's wife may, as far as I know, personify all the virtues, but is it not cruel to condemn a supremely pure and delicate rose to bear the harsh-sounding title of Frau Karl Druschki? Nor has Oberhofgartner Terks a pleasant sound to English ears. A Society for the Protection of Flowers from being called Bad Names is one of the crying needs of the day." Catalogue names have, nevertheless, their occasional compensations. Has Mr. Thomas-Stanford never noted the grim humor of the plant-breeder—and he an Englishman!—who called his new cabbage "Tender and True"? Cabbages, and all such northern delicacies, cannot be grown in a Madeira garden, nor can many of our best flowers. But compensation is almost the keynote of the book; the northerner in Madeira makes the best of what he has. One catches the spirit of this philosophy particularly in the closing pages, as the author leaves his gardens to nature and the native during the eight months before his return.

A book like E. V. Lucas's volume of casual reflection and comment, "One Day and Another" (The Macmillan Company), reminds us that the "light touch" in contemporary journalism belongs neither to the French with all their wit, nor to us in America with all our imaginative drollery, but to the supposedly stolid, brawny, and somewhat heavy nation of fox-hunters and rulers of empire. The ordinary French causerie is concerned with really grave matters of life, and civilization, and manners. We, for all our Irish, German, and Japanese slang, are equally taken up with such truly important matters as the tariff, woman suffrage, Polar exploration, or Mr. Roosevelt. But your Englishman goes on writing sentimental little chapters on dogs, and old furniture, and eighteenth-century letters. There is no denying that they do it very well and that Mr. Lucas is not the least among his tribe. Precisely a study of canine psychology is the most delightful essay in the lot before us. When a fine old Scotch collie tells us of his schemes for ridding himself of an upstart rival of a spaniel, and how, on hearing of the success of his efforts, he had to pretend he had a flea to conceal his emotions, Mr. Lucas gets his laugh honestly. Dainty, in a sentimental way, are the two or three pages giving a carrier-pigeon's view of fair France, as you cross it on the way from Barcelona to Brussels. But excellent as these exercises in fancy may be in themselves, a whole volume of them brings satiety. Mr. Kipling has so accustomed us to think of Englishmen as forming hollow squares and taming the impetuous Afghan, that we begin to resent this other Englishman who seems intent on spinning the most gossamer webs in romantic London chambers. As a volume to dip into now and then or to read aloud to visitors lacking the gift of conversation, the book can be heartily recommended.

Sir James Murray's preface to Volume VII of the "Oxford English Dictionary," now completed with the triple section Prophesy-Pyxis (Henry Frowde), lends to this vast undertaking something of that solemnity associated with the Egyptian pyramids and the cathedrals of the Middle Ages. For the building of this monument of English speech, more perennial than marble or brass, had begun when mature men now living were yet unborn; and many of those who spent long years gathering materials for the edifice, some of them with a voluntary and almost religious devotion, have already passed into oblivion. The mortuary roll with its two or three words of tribute and the muster of scores of living collaborators, distinguished in all arts and sciences, detract but little from the impressive impersonality of the work. The catalogue of those who died before the fruition of their labors is, however, extremely suggestive. It helps the remote and vermiculous reader to understand—when he has burrowed out a dozen symbols of speech apparently encrusted in their virginal mould—why he has been forestalled.

The statistical summaries furnished with this issue are unusually interesting. The total number of words recorded by the dictionary from A to P is 264,917. Of this great company 48,870 are marshalled under O and P. Within the limits of these two letters Johnson recorded only 4,485; yet Johnson remains, relatively, the next most copious illustrator with 12,111 quotations. The "Century" with 25,585 words gives 20,340 quotations; Funk's "Standard" with 27,097 words gives only 3,243; the "Oxford Dictionary," considerably improving on Johnson's ratio, gives 175,130. The section O has the honor of containing the longest preposition in the language, *of*, which requires eighteen full columns for its display. The article on *put*, a comparatively modern factotum, is next to the longest that has appeared; and printed like a light modern novel—it is more diverting than some we have read—it would require a volume of 60 to 100 pages. On the other hand, both the article on *Pullman* and the definition of the thing impress us as rather inadequate; "a railway carriage constructed and arranged as a saloon, and (usually) with special arrangements for use as a sleeping car"—is not a very illuminating differentiation. Furthermore, we should like to see *Pullman-porter* recorded, and recorded as a "main-word"—but this is not an American dictionary. In Cudworth's "Intellectual System" (1678) we note two terms not listed here—"Pseudo-Platonick," p. 559, also p. 560, "Pseudo-Platonick Trinity," and "Protagorean," p. 719. In Prynne's "Histrio-Mastix" (1633), p. 547, "Purser" is used with the meaning "cutpurse" sixteen years earlier than the example cited in Prophesy-Pyxis.

Why Brander Matthews's "The American of the Future and other Essays" (Scrib-

ner), like a syllabub, resembles food, but isn't, your reviewer is a little at a loss to say. It is sprightly, entertaining, clear, at times even forcible—though rarely—and one ought to get "forrarder" with it. Yet one doesn't. Perhaps the reason is that there is an odd lack of accent and a judicious weighing of opposites which efface every impression about as soon as it is made. This balancing method appears most clearly in the half-dozen more or less apologetic essays on our American walk and conversation. We are inordinately wealth-loving, but so has every nation been; our manners leave something to be desired, but our heart is in the right place; we are politically grasping, but learned it from the English, and so were the Romans. All these judgments are indisputable, but only the craving of expectant college audiences for tranquillizing utterance seems to justify their formulation. On the question of the theatre, Professor Matthews is more cogent. The New Theatre actually embodies most of the ideas he advocated some years ago. Again, in the essay on Reform and Reformers—a class whom even his good nature fails to enfold—a more pungent, indeed, a gently vitriolic flavor is noted, and the matter naturally gains in interest. A greater charity for the frailities of reforming human nature might have seemed in order, for the monster raises one of its most frightful heads in this very volume—to wit, spelling reform. Here nobody will dispute a free American author's right to spell as he pleases, but the quoted text of that fastidious talent Aldrich should have been respected. Could Aldrich have seen himself respelled and his pages adorned with such orthographical gems as "reacht," we opine he would have sought retirement and "retcht."

A second edition of A. W. Ward's "Electress Sophia and the Hanoverian Succession" (Longmans, Green & Co.) is now issued in a single handy volume without the illustrations of the earlier edition (Goupil & Co., 1903), but with a certain amount of revision which takes account of the more recent studies of the subject. The changes are in no sense radical, and the work retains its character of sober judgment, with perhaps a slight inclination to magnify the virtues and mininize the faults of the Brunswick family. The list of errata is pretty long, but still fails to note several minor errors, including the odd blunder on the first page of the life of placing the birth of its heroine in 1640 instead of 1630. In one respect the work is fresh. In a long appendix, Dr. Ward gives the original text, with a translation, of thirty-four letters which passed between Königsmarck and the ill-fated Sophia Dorothea, wife of George I, and which, by some unknown chance, have been preserved in the Royal Archives of State at Berlin in a packet inscribed by Frederick the Great. These letters (now, with the exception of two, first printed) fit in perfectly with the correspondence preserved at Lund, and remove any doubt, if such still exists among the well-informed, of the guilt of the lovers. In a French whose spelling (the third letter begins, "Que ne soufertong") recalls that of Thackeray's fine ladies, the princess and the count give vent to a passion of tragic intensity. Nothing, however, has come to light which gives a clue to the mysterious disappearance of Königsmarck.

It is probable that Professor Ward is familiar with the form of the late Arvède Barine's *nom de guerre* and knows that she was a woman, Mme. Charles Vincens, but it shocks one a little, nevertheless, to find in the new edition of his "Electress Sophia" a note referring to the author of "Madame, Mère du Régent" as M. Arvé de Barine. He should have been more careful in respect toward a book which now in its English dress ("Madame, Mother of the Regent," translated by Jeanne Mairet; G. P. Putnam's Sons) may be read as a pleasant supplement to his own. Madame, it is scarcely necessary to say, was the daughter of Sophia's oldest living brother, who succeeded to the Palatinate some time after the death of his father, the "Winter King." By birth she thus had a prior claim to the English crown, and would no doubt have succeeded Queen Anne (she outlived both Anne and Sophia) had she not gone through a farcical conversion to Catholicism, in 1671, for the sake of marrying the brother of Louis XIV. Her home thenceforth was at the court of France, from which she poured out a stream of letters to her aunt and others, which for voluminousness and minuteness of detail have scarcely a parallel in history. Out of this mass of writing, published and manuscript, Arvède Barine has made a volume as amusing and as thoroughly documented as any of her previous memoirs. Madame had a caustic pen; she never ceased to regret the homeliness of German ways and the lusciousness of German sauerkraut; and her amusing comments on the under side of French court life have furnished German historians with abundant material for chauvinism. Part of the amusement of the present volume is the dexterity with which the author turns the tables, showing the miseries of the Palatinate during the Thirty Years' War (when cannibalism became rife), the coarseness of life at Hanover, and the personal causes of Madame's spite against the French. Among the last was Madame's love (or feeling which closely approached love) of the King, and her consequent jealousy of Madame de Maintenon and all others who came between her and the object of her admiration. Altogether the story of her life is wrought into a delightful bit of comedy, not, however, to the neglect of its more serious aspects.

It may be that Ernest F. Henderson's "Lady of the Old Régime" (Macmillan), which is really another life of Madame, was inspired by the French original of Arvède Barine, but his work is based on first-hand acquaintance with the letters, and is in no proper sense an imitation of its predecessor. The weakness of Mr. Henderson's work is its lack of chronological sequence; its chief interest lies in its discursive account of life in the palaces of the Grand Monarque. In these pictures he naturally, while not going so far as the German historians, takes an un-Gallic attitude toward the court. "All are really like cats and dogs as regards each other," he writes, quoting Madame. And again: "Viewed from afar all is brilliant and attractive; but go behind the scenes, look at the ropes and pulleys, and nothing can be more sordid and disgusting. . . . The sadness that reigns here is indescribable." All that is true, if you choose, but you feel that Madame was by nature one of those sharp, cynical wits who would have had much the same report to make if she had lived in a hovel instead of Versailles. It is a pity that Mr. Henderson has not given more of those quotations that contain her philosophy of life. "There are a hundred different subjects," he says, "with regard to which, if space only permitted, one would like to quote Madame"; space would have well permitted, if he had left out much of his discursive story, interesting enough otherwise, of the life about Madame. No doubt, however, he knew his audience, and supplied the side-lights they needed. Nor is solid matter wanting, as in his brief analysis of the economic justification of much of the court's extravagance in so far as it brought the world to France to purchase luxuries. In one respect Mr. Henderson's work is far more enjoyable than the English version of Arvède Barine's: his style is good, whereas the language of the other, though correct enough, is still unmistakably a translation.

The October issue of the *American Journal of International Law*, with which Vol. III ends, contains Part iii of Mr. Hornback's elaborate study of the most-favored-nation clause of treaties, throwing much light on that rather technical and complex subject. It also contains the second part of Hamilton Wright's paper on the International Opium Commission, in which body he was the United States representative. The opium problem assumed great importance from the American standpoint with our acquisition of the Philippines. Not only Great Britain, but also France, the Netherlands, and other Western nations are directly interested, through their colonies. Early treaties, as that with China in 1844, and that with Siam in 1833, made it clear that we sympathized with Eastern governments in their attempts to suppress the habit; and as lately as 1902 Congress has passed restrictive legislation. British officials have negotiated with China, stipulating that importations from India should be gradually diminished, to the point of ultimate extinction, but Mr. Wright shows that at present one-seventh of the 52,688 tons consumed yearly by China is imported from India. The agitation against the habit has, however, rapidly gained momentum. Our own State Department, inspired by the work of the Philippine Commission, inaugurated a new movement: on its initiative the International Opium Commission was appointed and met in China, where it unanimously adopted very definite resolutions and regulations, which, when confirmed by the Powers, will have the force of international law. Here, also, are discussed, in the voluminous Editorial Comment, the Persian revolution, and the Anglo-Russian *entente* relating to Persia. But one of the most significant matters presented is contained in the separately printed and paged Supplement of Official Documents: "A Preliminary Arrangement for Municipal Organization in the Zone of the Chinese Eastern Railway." This arrangement is embodied in a treaty between China and Russia, relating to a part of Manchuria. The surprising fact is that provision is made for the exercise, by the inhabitants, of the elective franchise.

The Rev. R. E. McBride's translations of the choruses of the "Bacchæ" of Euripides

and the third book of Lucretius published as "The Revellers" (Broadway Publishing Co.) are not to be judged by the conventional canons of literary and philological criticism. They subserve higher ends to which petty questions of metre and phrasing are subordinated. Dionysus is a symbol of The Liquor Power. His conduct in the play is that of the Chicago saloonkeepers, who warned "the friends of decency that this activity must cease, or 'we will burn your churches and cut the throats of your praying women.'" We learn from this drama that "the liquor controversy was on in the fifth century before the Christian era. The venerable poet employs his latest effort in striking a blow at the traffic, and, incidentally, settling a few scores with his former critics and persecutors." This suggestion opens a vein which could be properly exploited only in an imaginary dialogue between the Rev. R E. McBride, Professor Münsterberg, Walter Pater, the ingenious Professor Verrall, and the author of "Testimonium Animæ."

A contributor to the *Allgemeine Zeitung* of Munich protests against the overweening ambition of the authorities of Berlin, city and university, to secure for their university a primacy in education. Not only is the drawing off of the best men from the provincial faculties deplored; the lament is added that young doctors of philosophy should consider it necessary to worship at the Berlin shrine "for at least one semester, in order to become *personæ gratæ* at that university. It is even considered dangerous to express convictions and conclusions running counter to those held by its learned authorities." The ambition of the Berlin university to head an academic hierarchy in Germany, and to become the only German *Weltuniversität*, occupying in the Fatherland the position held by the Paris schools in France, is amply sustained by the State, which lavishly pours out its millions for Berlin, while counting out every pfennig the other institutions of equal grade receive. Of the 95,160,000 marks distributed by the government to the nine Prussian universities in the last forty years, Berlin received almost twenty-eight million.

Ludwig von Pastor, doubtless the ablest Roman Catholic historian of Germany, has published the fifth volume of his "Geschichte der Päpste seit dem Ausgange des Mittelalters" (Freiburg-im-Breisgau: Herder), with the special title Paul III (1534-1549). This work as a whole is the ablest presentation of the Reformation period from the Catholic standpoint and an answer even to such men as von Ranke. It is too scholarly to be a mere *apologia pro domo* for the church of the author, and its wealth of new sources makes it particularly welcome to the real student of those troublous times. Special light has been thrown on such historic characters as Eugene IV, Pius II, Alexander VI, Julius II, and Leo X.

New York city will welcome, during Christmas week, at least eight thousand members of various learned societies, which will hold more than thirty sessions. The American Historical Association and the American Economic Association have taken the lead in making the arrangements. The meetings will begin on the afternoon of December 27 and continue through Friday morning, December 31. Among the men of national reputation who will give addresses are David R. Dewey, president of the American Economic Association; Albert Bushnell Hart, president of the American Historical Association; President A. L. Lowell; W. L. Mackenzie, Canadian minister of labor; H. W. Farnam, president of the American Association for Labor Legislation; W. G. Sumner, president of the American Sociological Society; S. N. D. North, acting president of the American Statistical Association; John H. Finley, president of the American Social Science Association, and various foreign delegates: G. W. Prothero of London; Eduard Meyer of Berlin; R. Altamira of Madrid, and C. T. Colenbrander. Addresses are promised also by Profs. F. H. Giddings, W. S. Ferguson, A. G. Keller, J. P. Bretz, A. C. Howland, A. W. Small, C. A. Elwood, R. F. Scholz, F. L. Paxson, C. M. Andrews, H. E. Bourne, F. H. Hodder, and E. S. Meany, and by Waldo G. Leland of the Carnegie Institution and Paul Diesernd of the Library of Congress. On December 27, at 8 P. M., there will be a citizens' meeting of welcome at Carnegie Hall, with Joseph H. Choate presiding, and President Taft, Gov. Hughes, Mayor McClellan, and Dr. Nicholas Murray Butler among the speakers. On Tuesday, the 28th, meetings will be held at Columbia University and at the New York Historical Society, and a luncheon and reception to members of all the associations at Columbia. On Wednesday, the chief meetings will be held at the Waldorf-Astoria Hotel, and on Thursday, conferences at Columbia University, at the Merchants' Association, the Chamber of Commerce, etc. On Friday, further meetings will be held at Columbia University and the Waldorf-Astoria, and a special train will take the representatives of the societies to West Point. These meetings mark the twenty-fifth anniversaries of the American Historical Association and American Economic Association.

On November 15 the Cotta'sche Buchhandlung in Stuttgart, one of the oldest and most important publishing houses in Germany, celebrated the 250th anniversary of its foundation. The Cotta family was of Italian origin, and in the tenth and eleventh centuries held the highest position among the nobility of Lombardy. In 926 Andrico Cotta was chosen Archbishop of Milan. Among their ancestors the Cottas included the Roman prætor L. Aurelius Cotta, and they trace their descent back to Aurelia Cotta, the mother of Julius Cæsar. Early in the fifteenth century Bonaventura Cotta migrated to Saxony and acquired an estate near Dresden. Other members of the family settled later in Eisenach, where they soon distinguished themselves as ardent adherents of Luther. John George Cotta, who was born in 1631, became a bookseller, serving six years' apprenticeship with Mervius in Wittenberg, and later marrying the widow of Brunn of Tübingen. To his wife's book-shop Cotta added a publishing house under his own name. Before his death in 1692 he had become one of the most celebrated publishers in Germany. Later the house which he had founded was moved to Stuttgart, where it remained in the hands of the Cottas for seven generations. On the death of Carl Baron von Cotta, in 1888, the business was purchased by Adolf Kröner, who, in 1901, opened a branch establishment in Berlin. In connection with this rare celebration the publishing house has also issued a large "Jubiläums-Katalog," containing 407 pages of authors and composers, including the most illustrious Germans in the departments of literature and music, and adorned with portraits of the founder of the house and his five successors. An interesting supplement to the catalogue is the correspondence of Goethe and Schiller with Cotta from 1794 to 1831.

Arthur William Moore, since 1898 Speaker of the House of Keys, died recently at his home in the Isle of Man. Born in 1853, he was educated at Rugby and Cambridge. As the chief authority on Manx history and customs, he was editor, 1885-1887, of the "Manx Note-Book." He published also "The Surnames and Place-Names of the Isle of Man" (1890), "The Folk-Lore of the Isle of Man" (1891), "The Diocese of Sodor and the Isle of Man" (1893), "Manx Ballads and Music" (1896), "A History of the Isle of Man," two volumes (1900), and "Manx Worthies" (1901).

From Paris is reported the death, in his seventy-seventh year, of Camille Bainville, author of numerous works inspired by sojourns in the Orient, in Greece, and in Italy.

The death of Edmé Piot at his home in Saint-Mandé, aged eighty-one years, is announced. A capitalist and contractor of the Côte d'Or, he was, besides, counsellor-general and senator for his department. With Bertillon, he was an early and active propagandist of the repopulation of France, in which connection he figured as the author of two pamphlets, "Enquête sur la dépopulation de la France" (1900), and "La Dépopulation" (1902).

The poet and painter, too, Valère Bernard, has been elected *capoulié* (chief) of the Association Félibréenne, of which the author of "Miréio" (Mireille) is the honorary president. M. Bernard succeeds in office M. Devoluy, and the election took place in the rooms of the Muséon arlaten. The new head of the *félibres* is the author of a novel, "Batagatouni," descriptive of the Marseilles of an older generation, and of poems which, gathered together under the title, "Paouriho," are accepted as among the best products of the Provençale Renaissance. To these books, and the several others which we have not mentioned by title, are shortly to be added a volume of short stories, "Feruno," and a new volume of verse.

From Alsfeld is reported the death of Dr. Max Rieger, in his eighty-second year. He was once an authority on the older German poetry, and the author of controversial essays, "Zur Kritik der Nibelunge," etc., of "Klingers Leben und Werke," and "Der falsche Baurat."

Science.

SETON'S ANIMAL BOOK.

Life-Histories of Northern Animals. By Ernest Thompson Seton. 2 vols. New York: Charles Scribner's Sons. $18 net.

To the American and English publics, Mr. Seton is very much *persona grata;* and this is his monumental work. Its scope is suggested by the sub-title: "An Account of the Mammals of Manitoba";

but it is by no means bounded by it. The first volume is devoted to "The Grass-eaters," and it includes not only the hoofed animals, but also the rodents, to a total of twenty-nine species. The second volume is given up to "The Flesh-Eaters," and it embraces the true carnivora, the shrews, the moles, and the bats—thirty species in all. These species do indeed inhabit Manitoba; but all of them inhabit regions far beyond the borders of that province, and therefore the author's results cover animals that are quite as much at home in the United States as in Canada. Indeed, if a balance were to be struck, it is probable that the greater part of Mr Seton's discourse would be found to apply southward of the international boundary.

It is quite impossible to give within available limits anything more than a bird's-eye view of this really great and also delightful work. First of all, the reader must be assured that it is a serious, scholarly, exact, and at times almost painfully conscientious work of science, yet made clear and "popular" for the benefit of the reading multitude and having also the most understandable and charming dissertations on the various habits of wild animals that have ever been laid before the public under the rules of science. The only thing in any way against the book is its price, but the reader soon becomes convinced that such a wealth of illustrations, maps, and beautifully-printed text could not be produced for less money.

Each of the fifty-nine species included is admirably handled, and with satisfactory fulness of detail. There are no long and tiresome lists of synonyms, descriptions of characters already well known, and anatomical details that are interesting only to the comparative anatomist. Whenever a species is thrown upon the screen, the author plunges at once into a consideration of the facts regarding it that are most interesting, most valuable, and freshest to the reader. Each species is considered systematically under thirty distinct heads; but the author is "shocked to find in how many cases the heading is missing, because there are no facts available for classification under it." With the smaller forms, and especially the earth-dwellers, this is not at all surprising.

It is interesting to note in detail the sub-heads under which this lover of wild animals classifies his knowledge. First of all, it is to be remarked that, contrary to the custom of those scientific writers who use Latin names only, Mr. Seton gives English names the important place, and treats the ever-changing Latin terms as the by-product that they really are. His descriptions aim to give "the impression that the animal makes when seen alive," and "the points that will distinguish it from its nearest relatives." The measurements given are only those that are of prime importance. His facts and figures relating to the speed of animals are new and most welcome; and so are the many admirable illustrations of tracks and feet. As an authority on tracks, Mr. Seton's book will be welcomed by thousands of persons who are seriously seeking to become skilled in woodcraft.

The subject of scatology—the droppings of animals—is here treated in *extenso* for the first time; and the publishers have courageously, and in the true scientific spirit, published Mr. Seton's very illuminating drawings in excellent form. Every outdoorsman who goes into the haunts of wild animals will gladly certify to the value of this section, and thank the author for the first information of importance, so far as we are aware, ever published in English on this subject.

The mind of the animal, its environment, geographic range, home range of the individual, migrations, numbers, food, property rights, storage habits, social habits, language, senses, amusements, mating habits, and mental and moral traits generally—all have been set forth for each animal, so far as knowledge was available. To many readers, the most interesting and valuable side of this work will be found in the observations of the author on the mental and moral life of wild animals.

In elucidation of the geographic ranges of his fifty-nine species, Mr. Seton has with great labor wrought out sixty-eight maps, nearly all of them of full-page size. Only those who make such maps can appreciate the amount of research that they cost. As a rule, the maps show not only the geographic range of the species specially considered, but also that of each of its nearest relatives. For example, the caribou map shows not only the range of the woodland caribou, but also the ranges of the entire nine other species found in North America; and they are now mapped in detail for the first time. It is noticeable that in the map of the author's own working range, his red line of travel goes up to the barren grounds of Canada, north of Great Slave Lake; but we regret the absence of the musk-ox from the life-histories. We do not place high value on the map of the faunal areas of North America. Like every map of its kind, it is too elaborately complicated, too much like a geographic puzzle, to be of great use. The impression that it leaves upon the mind is distinctly chaotic; but that is not the fault of the author.

The most important animals treated in the 1267 pages before us are the Canadian elk, white-tailed deer, mule-deer, moose, woodland caribou, prong-horned antelope, bison, grizzly bear, and black bear. In space and attention all these are treated liberally. The text brings each species squarely down to date, although it is to be noted as an exception that the moose recently introduced in the Adirondacks, to restock the northern wilderness, are all dead, and that this very commendable effort has ended in failure. The mountain sheep, mountain goat, and musk-ox have not been included, because they are not found in Manitoba. Among the smaller mammals treated are seven species of the squirrel family, the woodchuck, beaver, the muskrat, twelve species of mice and voles, the gray gopher, Canadian porcupine, and three rabbits and hares. All these are in the first volume. The second volume contains the Canada lynx, four wolves and foxes, ten valuable fur-bearers of the marten family, the raccoon, two bears, six shrews and moles, and six bats. Incidentally, we do not subscribe to the author's new notion of writing the English name of *Ursus americanus* as "blackbear."

One of the most novel and interesting features is the wealth of new information, set forth with the aid of many plans and drawings, illustrating the underground life of the burrowing animals. All this is absolutely original, and reveals years of painstaking observations. In this field Mr. Seton's pencil has given him an advantage over the ordinary naturalist, and he has used it to the utmost.

As might be expected of Mr. Seton, the illustrations of this work are well-nigh all of them by his own hand, the two volumes containing, in fact, 560 drawings by the author. In this day of many camera pictures of young wild animals in captivity, and of other photographs that fail to illustrate thoroughly their subjects, it is a pleasure to open a book liberally supplied with well-executed drawings that show precisely what the reader wishes to see. Take, for example, the plate of the Eastern chipmunk, after page 336. We venture to say that the camera has not been made that can catch and record from the living animal such an abundance of desirable details as are so beautifully shown in that hand-made plate. In the photographing of living animals of small size there is a point beyond which the camera cannot go. At the same time, not all of Mr. Seton's drawings are perfect. The cow bison in plate xxii was not drawn from a healthy, typical specimen; and the legs of the grizzly bear in plate lxxxviii are blacker than those of the black bear in plate xcvii; but such small defects as these are "trifles, light as air" in comparison with some of the shortcomings of the camera when conditions are not quite right.

"Life-Histories of Northern Animals" may well be called a sumptuous work. As a specimen of modern bookmaking, it is delightful. Its typography, paper, presswork, and arrangement are all that could be desired, and its index is exceptionally good.

Drama.

Shakespeare und unsere Klassiker. Band I: *Lessing.* Band II: *Goethe.* Von Arthur Böhtlingk. Leipzig: Fritz Eckardt Verlag.

Looking up to Shakespeare as the "King of Poets," beside whom Goethe, at best, may be regarded only as *der Dichterfürst*, and recollecting Lessing's convincing query in the "Dramaturgie," "Is it Shakespeare, always Shakespeare, who understood everything better than anybody else?" together with Goethe's memorable outcry, "*Shakespeare und kein Ende!*" Böhtlingk has sought to show, in three volumes, the enormous indebtedness of German literature to the English, and, in particular, the indebtedness of the three greatest of modern German writers to Shakespeare. In volume one he treats of Lessing, and endeavors to indicate when and where the reformer of the German drama came upon Shakespeare, how he appropriated him and thereby developed as he probably would not have done if left entirely to himself, until at last he was able to pass the glowing torch on to Goethe. In volume two, Böhtlingk follows the well-known paths of the youthful Goethe at Leipzig and at Strasburg where he met Herder, searches for the evidences of the English master in the various masterpieces of Goethe, and crowns all by the declaration of the author of "Faust" himself, on the evening of his long life, that without Shakespeare he could have attained to nothing. In the third volume, announced, but not yet published, the author expects to prove that even Schiller, with all his native talent and his fortunate apprenticeship under Goethe, picked up some of his best chips in the "Will of all Wills'" workshop.

In a preface to the series, Böhtlingk sketches the relation of Shakespeare to various world celebrities, including Dryden, Voltaire, Hugo, Tolstoy, and even Bismarck, and laments that so little should have been done hitherto, by Germans or Englishmen, to make clear the beneficent effect of Shakespeare on later German letters. Starr and Gervinus both slipped by the index-fingers, and Erich Schmidt, Lessing's biographer (as a self-constituted deity after whom no one need attempt any criticism of Lessing!), refused to hear aught of Shakespeare as a guiding star to his hero. Alois Brandl alone had the sagacity and courage, according to Böhtlingk, to claim for Shakespeare the fullest homage from the Germans, and he but indicated the path that should be followed. Had Böhtlingk contemplated, however, a more scientific form for the results of his researches, and a bibliography, he would probably have cited various stray contributions on this subject that have appeared in the Goethe *Jahrbuch*, the publications of the German and the English Shakespeare societies, and elsewhere.

How did Lessing come upon Shakespeare? Not, as many have supposed, through Von Borck's translation of "Julius Cæsar," which was too miserably done to have attracted any one with a grain of genius. Lessing probably first came in touch with the English bard through Mylius, who, though a *Schwärmer* for Gottsched, had a general interest in the theatre. It was not long before Lessing broke away from Gottsched, and though he did not move towards Shakespeare in particular, he did make for the English stage. To the end of his work on "Miss Sarah Sampson," Lessing had but a faint idea of the real Shakespeare, the best evidence of which is his excessive admiration for Dryden. Lessing was made aware of Shakespeare as a ruler of the stage through Voltaire's "Letters from England," and in the English playwright the great German was born again. The full flood of Shakespearean life in Lessing is first seen in "Minna von Barnhelm," where Böhtlingk finds numerous points of similarity. In Minna and Franziska he discovers Portia and Nerissa; the fortunes of the ring given by Minna to her lover recall the ring in the "Merchant of Venice"; the dialogue in general has a flavor of Shakespeare about it, and there is a Shakespearean reminiscence in the contrast of serious and comic in the Saxon comedy. The *Grundakkord* of Lessing's "Minna" is the sentiment of the familiar lines, "How far a little candle throws its light!" In the over-conscientious Tellheim, also, we are expected to see Hamlet's stern idea of truth, though we are also told that Lessing, in portraying the passionate major, had in mind the earlier and more immortal Moor of Venice. Only a trace of Shakespeare is apparent in "Laokoon"—Lessing's reference to the English poet's method of depicting ugliness; but Emilia Galotti's father is none other than Othello in German garb, while the Prince and Emilia are Romeo and Juliet. Finally, "Nathan der Weise," the last fruit of Lessing's busy pen, and imbued with his ever-increasing admiration for the English dramatist, is so full of Shakespeare that it might well be called the "Merchant of Jerusalem." Never did any one warm himself so modestly at the hearth of a stranger as did Lessing in his early acquaintance with the stimulating Shakespeare; but, just as Lessing maintained that only a genius could awaken a genius, so, when once inspired by his English master, he easily surpassed all his German contemporaries.

Goethe, on the other hand, came under the spell of Shakespeare earlier in in life than Lessing, and not merely through Herder, but also through Lenz. Goethe perceived in his English model not a dramatist, but nature itself, and thus more easily fashioned his strenuous "Götz." "Hamlet" contributed much also to "Werther," "Faust," and "Egmont," and Goethe's analysis of "Hamlet" is to-day of great value for the understanding of both the English and the German poets. "Macbeth" also helped Goethe to fashion "Faust," especially the scene of the *Hexenküche.* "Wilhelm Meister," in part at least, is almost a second edition of Shakespeare, in another and prose form. Only when Goethe was busy with his "Iphigenie" did he swing away somewhat from Shakespeare, and simply because of their different attitudes toward the antique: while Goethe would wed himself to the ancient *Kultur*, Shakespeare rather toyed with and made sport of it. Yet notwithstanding that, and the contributions of the French school to Goethe's mental advancement at this critical juncture, Shakespeare remained much to him, and, as director of the Ducal Theatre at Weimar, he staged Shakespeare repeatedly, and so contributed to the latter's popularity in Germany. Finally, the "Tempest" sweeps through the second part of "Faust."

Summing up Goethe's relationship to Shakespeare—a theme, as we know, that Goethe frequently selected in his chats with the Boswellian Eckermann—Böhtlingk finds that his indebtedness to the Briton cannot be estimated too highly. Great as Goethe was, and necessary as it is to remember that, after all, he is what he made out of predecessor and contemporary by stamping his own magnificent ego upon them, Goethe appropriated Shakespeare so thoroughly that he derived from him ethically, æsthetically, and in a religious sense, almost his entire *Welt-* and *Lebensanschauung.* And thus it was that, white-haired and full of wisdom, he still described his early acquaintance with the poet-genius as the experience of one who suddenly came upon the source of his very being. "I sprang up into the free air," said Goethe, "and felt for the first time that I had hands and feet!"

Of the many series now being published in England and Germany on the old English stage, none is more attractive in form, and few, if any, more useful in content, than that of the Malone Society. The six volumes of 1907 are now followed by a second six, which include five plays and a continuation of the "Collections" of the earlier issue. The plays are: "The Old Wives Tale" (1595), "The Tragedy of Locrine" (1595), "The Tragical Reign of Selimus" (1594), "The Life of Sir John Oldcastle" (1600), and "The Interlude of Calisto and Melebea" (c. 1530). The object is to present exact type-facsimiles; and to this end the printer, where possible, is provided with a photographic reproduction of the original, while the proof is not only read by the editor of the particular volume, but is also checked by the general editor, W. W. Greg. In the introductions there is no attempt to discuss debatable matters, but in some in-

stances the editorial work is otherwise heavy. Thus, to the first quarto text of "Sir John Oldcastle" the editor, Percy Simpson, has added a complete list of the variants in the second quarto and a few in the folios. The most important part of the "Collections" is that which contains the documents drawn from the Burghley Papers. Many of these have already been printed by J. P. Collier and others, but they are here for the first time brought together. To go through them is to get another notion of the many-sided activity of the great Sir William Cecil; it is to have impressed on the mind also the fact that from a very early date the theatre was more or less an outlaw in the state, and a centre of disturbances.

Marguerite Merington, a playwright of some experience, has undertaken the thankless and unnecessary task of making another stage version of "The Vicar of Wakefield" (Duffield & Co.), a tale whose immortal charm is almost wholly literary and vanishes when description is translated into action. For modern stage purposes the mere incidents are for the most part antique melodrama of the clumsiest description. Mr. Wills, by omitting many and modifying other details, succeeded, in his "Olivia," in preserving a few whiffs of the original fragrance. Miss Merington, less judicious, has, by a sadly mistaken fidelity, succeeded only in turning an exquisite story into a singularly awkward and preposterous play.

Very likely the biography of Ernst von Wildenbruch, now in preparation, will tell us whether it was by mere coincidence or by a romantic return to an early love, that the dramatist was prompted in the closing hours of his life to take up again a theme similar to that once selected for a youthful theatrical essay. In "Der deutsche König"—the drama staged for the first time on November 2 in the Königliche Schauspielhaus in Berlin—one is reminded of the original draft for "Die Karolinger," and of Wildenbruch's most popular late production, "Die Rabensteinerin." The action occurs a thousand years hence, and the Saxon is once more threatened by the Hun. Possibly no previous drama of Wildenbruch's excels this one to which, with the accumulated experience of a warring lifetime, he put the final touches but shortly before his death.

From Paris comes to us the first volume of the "Théâtre complet" of Edouard Pailleron, author of that play of undying popularity, "Le Monde où l'on s'ennuie." It is a pleasant reminder that the dramatist wrote, before he composed the play named, charming pieces in verse: "Le Parasite," "Le Mur mitoyen," "Le Dernier Quartier," etc.

Paul Bourget's play, "Divorce," a dramatization of his novel of the same name, of which an English version by Stanislaus Stange was produced in the Lyric Theatre on Monday afternoon, is not likely, for several reasons, to excite public interest here as it did in Paris. There is here, for instance, no general political conflict between civil and religious authority; the theme dealt with is vital to only one section of the community; the premises from which the dramatic action proceeds are too plainly devised for debating purposes to give the illusion of reality, and the acting is not brilliant enough to make the academic characters human and sympathetic. But the chief weakness of the piece, in its present shape, lies in its pusillanimous conclusion. At the final crisis it dodges, by means of a compromise, what ought to have been the catastrophe. Gabrielle Darras, married in the Roman Catholic faith, sacramentally, gets a civil divorce from an uncongenial husband, after bearing him a son, and enters into a civil contract with an intellectual atheist, whose views she gradually, but not entirely, adopts. Her daughter, born of the second union, is reared, by prenuptial agreement, in the faith, and in time reconverts her mother. The son, meanwhile, hating his stepfather, falls in love with a Socialist nurse, a believer in free union, and offers her marriage, although she is already the mother of an illegitimate child. He insists that his case is parallel with that of his mother. Out of these complications a number of ingenious emotional situations are constructed. Finally Gabrielle, her first husband having conveniently died, prompted by a priest, tells her second that she will live with him no longer, unless he weds her religiously. He refuses, declaring that such an act would be a practical admission that they had been living in concubinage. In this dilemma she appeals to the priest, who strangely tells her that she must remain in her home, in the hope that her husband's love will prevail over his rational convictions, as, at the last moment, it is made to do. So the play ends with the triumph of expediency, where faith and morality could only offer a deadlock. This is the real lesson of the play, although it is not the one designed by the author. If M. Bourget wished to prove that in contracts law is less potential than a creed, he has failed in his demonstration.

Miss Grace George will play Lady Teazle in the revival of "The School for Scandal" at the New Theatre on the evening of December 16. She joins the company for that play only. The cast throughout will be interesting. Matheson Lang, the English romantic actor, who was recently engaged, will make his first appearance here as Charles Surface. The Sir Peter Teazle will be Louis Calvert; the Joseph Surface, A. E. Anson; the Sir Oliver, Jacob Wendell, jr.; the Mrs. Candor, Miss Rose Coghlan; the Sir Benjamin Backbite and his uncle Crabtree, Messrs. Gottschalk and Bruning; the Rowley, Cecil Yapp; the Maria, Miss Olive Wyndham, and the Moses, Lee Baker.

"The Man of Iron," a new play by Israel Zangwill, will be produced this season by Liebler & Co. The theme is universal peace. This is the seventh play which these managers have bought from Mr. Zangwill, including a dramatization of "The Mantle of Elijah," which has not yet been produced.

"A Russian Tragedy," the one-act piece which Sir Herbert Tree has just produced at His Majesty's Theatre, in London, is an adaptation by Henry Hamilton from the Russian of Adolf Glaes. It is the story of a woman who, eager to avenge the death of her lover, seeks out the governor of the jail who directed his execution and, playing the part of la Tosca to his Scarpia, murders him in cold blood. Mrs. Patrick Campbell plays the part of the heroine.

The historical play, "Beethoven," based on the life of the composer and accompanied by orchestra selections from his works, which Sir Herbert Beerbohm Tree recently produced in London, is among the new productions promised for next month by the New Theatre.

On November 23 a deputation of English actors presented to the Comédie Française, on behalf of their profession, a memorial to Coquelin *aîné*. The deputation consisted of Sir John Hare, Sir Charles Wyndham, Arthur Bourchier, and others. The design for the memorial, in the form of a bronze shrine, was suggested by Mr. Forbes-Robertson, and it was executed by Gilbert Boyes.

On November 2 the monument to Constant Coquelin, the work of Binet, with a bust by August Maillard, was unveiled at Pont-aux-Dames, in the Retreat for Aged Players founded by the comedian.

From Lyons comes an account of the first performance, unless at Brussels, of the "Mangeront-ils?" of Victor Hugo. The production of the drama, at the Théâtre des Célestins, was preceded by a lecture by Léo Claretie.

The new comedy at the Athénée, in Paris, is the work of Gaston Devore. It has for the central figure an eighteen-year-old maiden whose mother has brought her up in absolute ignorance of all things wherein sex is concerned. Her mind, indeed, is the "Page blanche" which gives the piece its title. "Our young contemporaries err, rather, in an excess of knowledge," writes one of the critics of the piece, who finds M. Devore's Juliette too naïve a character to be truthful. Described as an *œuvre à idées*, the play has also abundance of the Gallic salt. The thesis defended is much the same as that of Wedekind in his "Spring's Awakening."

Madame Dinah Félix, sister of the famous Rachel, has died in Paris, at an advanced age. Her sister, the great tragédienne, she had mourned with a marked devotion for a quarter of a century. As early as 1847, at the age of ten years, Dinah Félix appeared on the stage which she was long to occupy as a soubrette of the Odéon and of the Comédie Française. Her first appearance at the latter theatre was in 1863, in the "Folies amoureuses." In the part of Lisette, in Marivaux's exquisite comedy of "Le Jeu de l'Amour et du Hasard," and in that of Dorine, in "Tartuffe," she was for twenty years a favorite of Parisian theatregoers.

Music.

Success in Music, and How It Is Won. By Henry T. Finck. New York: Charles Scribner's Sons. $2 net.

The chief musical critics of America are at present quite unanimous in giving reminiscences. Mr. Krehbiel of New York began this fashion recently, with his "Chapters of Opera." Mr. Upton of Chicago followed with his "Musical Memories," and now comes Mr. Finck with his "Success in Music." All three of these books deal largely with the personal experiences of the authors and describe the acquaintances made in art circles by veteran critics. But Mr. Finck's volume goes considerably beyond this, for he interpolates shrewd estimates of the various artists and also gives several short essays that are of

value to the student in music. The personal pronoun is used in this work (as in the other two) and adds to the informality with which the information is imparted. The author's own musical reviews in the *Nation* are freely quoted, of which the reader will be glad, for many of these deserve more than the evanescence of journalism.

The book begins with some interesting statistics as to the pecuniary returns of a musical career. Much curious matter is here assembled. We learn, for example, that the great Flonzaley Quartet gave a public concert in Cologne to which only three tickets were sold and that the well-known composer Pfitzner was less fortunate than this, for he sold none at all to his recital of some of his important compositions. The financial data range from "The Merry Widow" to Brahms, and seem reliable as well as interesting. Yet we venture to doubt that the publishers of Winner's "Listen to the Mocking-bird" made *three million dollars* out of that song, for that would mean at least one copy in every household of the entire United States.

There follows a number of biographies that have especial interest. In order that he might carry out the promise of his title, Mr. Finck has included, among the singers, accounts of Catalani, Jenny Lind, Pasta, Schroeder-Devrient, and other celebrities of a bygone epoch. Of these he has little new to tell us. But it is quite a different story when he reaches the lives of Patti, Nilsson, Tetrazzini, Lilli Lehmann, Brandt, Schumann-Heink, Sembrich, Mary Garden, Nordica, Farrar, and Eames. Here his foot is upon his native heath, for he has a personal acquaintance with nearly all of them and his pages glitter with many personal anecdotes and conversations.

It is a quite natural phase of heroine-worship to desire to know all possible details of the *prime donne* of the present, and there is no work that puts us so closely in touch with them as this volume. Boswellian detail (without Boswellian servility) makes the biographies of Sembrich, of Lilli Lehmann, and especially of Schumann-Heink and of Geraldine Farrar, models of their kind. The letters of Miss Farrar to our author and his wife are one of the most delicious surprises in the volume. The artist is revealed in an entirely new light and stands higher than ever before because of the revelation. Here we find art-study of the sincerest and most intelligent kind, and many a music student will be astounded to discover how many channels there are for self-advancement. Male singers are also passed in review in this book, and Maurel, Renaud, and Wüllner bring this portion of the work quite up to date. On Jean de Reszke our author has two chapters explaining why he is supreme among all tenors and teachers.

A procession of pianists is ushered in by a well-studied estimate and analysis of Chopin, both as pianist and composer. A parallel is drawn between Liszt, the king of the piano, and Paganini, the virtuoso of the violin. Bülow, Rubinstein, and Paderewski are next estimated and described. In the case of Paderewski, Mr. Finck again uses superlatives. We note that he does not cite the comical view of that blundering music critic, Bernard Shaw, who, at the end of Paderewski's first season in London, found that "at last he almost displayed a little of temperament."

The parade of violinists includes many of the chief ones who have "drawn the hairs of the horse across the bowels of the cat," from Paganini to Fritz Kreisler. Of teachers who have become famous we have sketches of Leschetizky; of Sevcik, the great violin teacher; of Garcia, William Mason, and Jean de Reszke. Later there come several short chapters on musical instruction, advice to students, rules of practice, and health hints.

Last of all (and the volume has the merit of presenting a steady *crescendo* of interest) comes a chapter written in English by Paderewski himself, especially for this volume. It is on a subject that has not been sufficiently written about—the *tempo rubato*—and the views of the leading pianist of the present on such a subject are of importance to every musician of the world. Paderewski complains of the term itself—"stolen time"—which is really not stolen at all. He thinks that the term *mouvement dérobé* would suit the case better, or possibly, in English, "evasive movement." He combats the notion of regarding it as sentimental:

> Our human metronome, the heart, under the influence of emotion, ceases to beat regularly—physiology calls it *arythmia*. Chopin played from his heart. His playing was not national; it was emotional

He believes the *tempo rubato* to be much older than is generally estimated, and holds that it belongs even to the most ancient classics. He thinks that the *rubato* should not be avoided in Beethoven's works.

"The Decline and Fall of Wagner" was the title of an article in the *North American Review* about a year ago. This decline and fall is still going on merrily at the Metropolitan Opera House, where there have just been four Wagner performances within ten days, before crowded houses—two of "Lohengrin," one each of "Parsifal" and "Tristan and Isolde," whereas Caruso, who was supposed to have killed Wagner, sang last Saturday night to a comparatively small audience. The present interest in the Wagner operas is the more notable because there have been greater casts in the past; but never before have the orchestra, chorus, and scenic outfits been quite equal to those provided by Mr. Dippel for "Lohengrin" and "Parsifal," and by Mr. Gatti-Casazza for "Tristan"; and this is the first time since the Metropolitan was built that the management has heartily aided the singers, players, and stage managers in their zealous efforts to realize all of Wagner's intentions. The success of "Tristan" calls for particular mention because it was largely due to an Italian, Mr. Toscanini, who has proved himself worthy of being ranked with Seidl, Mottl, and Mahler. In the matter of Wagner conductors, New York has been singularly fortunate always.

Timely not only because of the nearness of the holidays, but because of the increased interest in Wagner, and particularly in his "Tristan and Isolde," is a sumptuous volume on this opera, just issued by the Frederick A. Stokes Company. It is a composite work, including a new translation of the poem by Richard Le Gallienne, a critique by Edward Ziegler, and seven full-page illustrations in color after paintings by George Alfred Williams, which are well executed and romantically rather than operatically conceived. Mr. Le Gallienne proved himself a dauntless hero when he undertook the task of englishing this poem, so unique in its versification, so saturated with feeling, so rich in words pregnant with meaning and suggestion. There are lines, as for instance "Höre ich nur" to the end of the poem, which seem to defy translation, for they are like music itself; yet here they are done into clear, poetic English. For the first time, one who does not know German can get an adequate conception of the glowing beauty of Wagner's poem. Mr. Ziegler's contribution is not merely a critique, as the title page intimates, but also a history of this greatest of all music-dramas, enlivened by many citations from Wagner's own writings, particularly his letters to Frau Wesendonck, the original Isolde—for "Tristan and Isolde" is autobiographic.

Novello & Co. (London) have published the "Proceedings" of the Musical Association, Thirty-fifth Season (1908-09). The papers include a discussion of the music of the Byzantine Liturgy, by R. R. Terry; "Dr. John Blow," by Dr. W. H. Cummings; "Thomas Mace, Musick's Monument," by Dr. Henry Wilson, and a study of the effect of "Orchestral Color" upon design and texture in musical composition, by Dr. H P. Allen.

Vincent d'Indy's "César Franck" is to be published, in English translation by Mrs. Rosa Newmarch, by John Lane Co.

"Izeyl," the new opera by Eugen d'Albert, with a libretto by Rudolph Lothar, has been well received at Hamburg, which is, as the London *Times* observes, "one of the most difficult towns to please in Germany." The story of the opera is an old one, and recalls incidents in the life of Buddha and his great renunciation, even more than certain other passages in the story of "Thaïs." The score is praised by the Hamburg critics for its melodiousness.

Prior to its production at the Opéra two weeks ago, Paris had had no opportunity of hearing the "Rheingold," except at symphonic concerts. For the performance, a thoroughly satisfying mise-en-scène was offered; and use was made of the French translation of the opera by Alfred Ernst.

"Quo Vadis," the opera founded upon the novel of Sienkiewicz by Henri Cain,

with a score by Jean Nouguès, was produced on the evening of November 26 at the Théâtre de la Gaieté, Paris. It was first produced last February at Nice. The mounting of the piece is both realistic and beautiful, but the music is universally described as banal, and pleasing only in its reminiscences of Massenet and Gounod. The composer of "Quo Vadis" has on the stage of the Opéra Comique a more recent composition, an opera of the Basque country, "Chiquito," which is rather more promising.

Frederick Bechtel died at his home in Brooklyn, November 23, aged eighty-one. For nearly fifty years he was a teacher in the Adelphi Conservatory, and he was the composer of many vocal and instrumental pieces, and of one opera, "Alfred the Great."

The Danish composer, Ludvig Schytte, died the other day in Berlin, where he taught at Stern's Conservatory. Born in 1848 at Aarhuus, Denmark, he was a pupil of Rée and N. W. Gade. His compositions are brilliant and technically interesting, but lacking in deeper originality. His Concerto, op. 28, was played by Rosenthal and others, his "Across the Prairie" (Über die Steppe) by Sofie Poppermenter, etc. He also wrote an opera bouffe, "Der Mameluk," and a song cycle, "The Deserted Woman." His sonata in B flat is widely known in America.

Dexter Smith, formerly a musical critic, died in Boston, November 29, aged seventy-one years. He was the author of several popular songs, and produced, in conjunction with the late Eugene V. Tompkins, at the Boston Theatre, in 1885, the light opera, "Zanita."

Art.

A BRADSHAW FOR ART.

The artistic rating of various European countries and America has been studied by Mr. M. W. Brockwell in the appendix to his excellent book, "The National Gallery: the Lewis Bequest." His figures are based not on total artistic treasures, but upon paintings of the Italian school of sufficient consequence to appear in Mr. Berenson's lists. It is as if one were to rate rival estates merely by their holdings in first mortgage bonds. It affords, however, a sufficiently accurate comparison of the artistic wealth of nations as expressed in painting by the old masters.

England's supremacy in this regard is well understood, but even so it is amazing to learn that in London, including Hampton Court, there are 874 Italian old masters of note, of which 389 are in public galleries. No account is taken of country collections in England. The private galleries of London boast no less than 485 fine Italian pictures, as compared with 455 in the three main galleries of Florence. The private treasures of London alone exceed by 50 per cent. the total of any other capital, saving only Florence.

Paris with 376 pictures, of which about two-thirds are in the Louvre, is a rather bad third. Then follows Berlin with a total of 335, of which 70 are in private possession. Vienna, with 311 in public galleries, and its private hoards unreckoned, presses Berlin hard for fourth place. Between Vienna and Rome there is a gap of nearly a hundred. Dresden and Budapest are neck and neck at 124 and 123, respectively. On a general count of all schools, however, the superiority of Dresden would be clearly manifest. Venice leads both by a trifle. We have ignored Siena and Perugia, which show startling figures high in the hundreds, because their pictures are of the local schools, and happen to have been listed with uncommon thoroughness.

America is naturally low in the rating. We have, with a notable exception or two, been gathering in Italian old masters only for a matter of twenty years. Our respectable total of 255 exceeds the figures for Rome, Dresden, Budapest, St. Petersburg, Turin, Munich, and other famous art centres. But here one must recall that comparison is made between a nation and single cities, and also that in quality our American collections still fall behind those of Europe. The American record, city by city, is a surprising one. Boston, including Cambridge, with 23 in public, 46 in private galleries, a total of 69 pictures, is easily the first city as regards Italian old masters. Philadelphia, with a total of 49, only two of which are in public galleries, is a fair second. The collection of Mr. John G. Johnson is largely responsible for this favorable showing. Whenever the proposed Elkins-Johnson-Widener gift to Philadelphia shall be effected, that city will easily lead the country in older painting. New York, with 26 in public and 15 in private galleries, a total of 41, falls a little behind Philadelphia. If the more recent acquisitions at the Metropolitan Museum had been reckoned in, the standing of the two cities might have been changed, though Philadelphia would retain the qualitative superiority. Oddly enough, New Haven, in virtue of 38 pictures listed from the Jarves collections, occupies fourth place. Since there is little else of artistic note at New Haven, its high rating is fortuitous.

It would be interesting to speculate on the reasons for the low rating of New York in Italian old masters. It is evident that, until the other day, they have been little in favor either with museum officials or amateurs. Possibly the material tinge of our life, our intense preoccupation with money-making and luxurious living, has made us the natural patrons of the realistic art of the Netherlands. In any case, while the experts of Europe are coming over to see a portion of our treasures of Dutch painting gathered temporarily together at the Metropolitan Museum, the connoisseur of Italian art in Europe is very likely to know all about Boston, Philadelphia, and New Haven, but very little about New York. The aggressive purchasing policy of the Metropolitan Museum will in time change all that. It may be hoped, too, that our collectors will gradually broaden their taste to include the only painting that fairly bears comparison with antique art.

Mr. Brockwell's figures show clearly the absurdity of the British panic over the exportation of art treasures. The hoard is so abundant, the superiority of the National Gallery so thoroughly established, that no conceivable hazard of the market is likely to impair England's supremacy as an art-owning nation. Her wealth, on the contrary, is so great that she is in a position to be magnanimous, and all the more that magnanimity implies the receipt of a substantial *quid pro quo*. We fancy Mr. Brockwell's statistics may allay the alarm prevailing in English artistic circles. In any case there seems to be no occasion for restricting export of pictures, after the Italian precedent.

As for ourselves, the most hopeful feature of the ratings is the position of Berlin. In less than a generation she has passed from an inconsiderable condition to fourth place, being overtopped only by London, Florence, and Paris. Of course, our museums and collectors cannot hope to repeat the record of Berlin. Times have changed, prices have risen tenfold, the supply of marketable old masters has been much diminished. Still, good sense, good-will, and a long purse will do wonders even to-day.

Arthur C. Champneys will publish this winter a work on "The Ecclesiastical Architecture of Ireland" (London: Bell). The book is expected to throw light on the sources of Irish architecture and decorative art, and will be generously illustrated.

From Lemcke and Buechner we receive a thin portfolio, "Botticelli," being the fifth section of the Italian division of Ludwig Justi's "Geschichte der Kunst in Drei Tausend Tafeln." There are sixteen plates, halftones, of fair execution. They represent the artist in practically every phase, and we note no substantial omission except the Tornabuoni frescoes in the Louvre. Dr. Justi's text gives for each picture a modicum of historic information with hints that make for æsthetic appreciation. For its popular purpose the work promises well.

A group of nine portraits by Van Dyke, from the Frick and Widener galleries, is shown at Knoedler's, in New York city. Two of the portraits belong to Van Dyke's first Flemish period: that of the painter Franz Snyders, executed when the greater artist was only twenty-one years of age, and that of his wife, who was the sister of Cornelis de Vos, another painter. These belonged, originally, to Philippe l'Egalité, and were separated at the sale of his collection in 1798. They are now both in the possession of Mr. Frick.

An exhibition of bookplates which will be opened in the Lenox Library Building on December 1 will be devoted mainly to modern American work. A few modern English, French, German, Dutch, and South American plates will be included, as well as a selection of books on the art. Among the foreign plates, a group by C. W. Sherborn, the English artist, who has been called the "father of the modern engraved bookplate," is particularly noteworthy. He engraves on copper, utilizing conventionalized foliage with rich effect. Among the American plates, those by the late Edwin Davis French are the most remarkable in their classic serenity and dignified beauty of decorative line. Sharing the place of honor with them in this exhibit will be the work of the late J. Winfred Spenceley, marked by variety, adaptiveness, freedom in handling, and nobility of expression. The exhibition will remain open for several months.

Through the sale, last season, of Sir John Day's collection, in London, many art treasures have reached this country; among them most of the fine set of etchings by D. Y. Cameron and Axel H. Haig, and two by Muirhead Bone, now on exhibition at the Kraushaar Galleries in New York city. It is only comparatively recently that the high excellence of Cameron as an etcher has been appreciated; yet, even in his life-time, some of his etchings have increased more than ten times in value since they were issued. Among them is The Crucifix, Rouen, a big subject described with effective simplicity, and the no less simple Stairs at Rowallan.

A number of American painters have been invited to exhibit in Berlin and Munich during the months of March and April, 1910. The invitation is extended through the Royal Academy of Berlin and the Royal Society of Munich; and the object of this exhibition is to make known in Germany the work of contemporary American artists.

The Archæological Institute of America will meet in Baltimore, December 28-31. Profs. W. N. Bates and John C. Rolfe of the University of Pennsylvania will read papers on "Two Labors of Heracles on a Geometric Fibula" and on "The Connection of Mirrors with Burial" respectively. Prof. Campbell Bonner of Michigan has for his subject "The Standard of Artaxerxes at Cunaxa," and his colleague, Prof. Walter Dennison, "The Artistic Value of the Pompeian Putealia." Princeton is represented by Howard C. Butler, with his paper on "Two Roman Fortresses in the Provinces of Syria and Arabia"; Charles R. Morey ("The Coinage of Bostra"); Thomas Jex Preston ("The Bronze Gates of Canosa"), and Oliver S. Tonks ("Experiment with Mycenæan Glaze"). "Structural Notes on the Erechtheum" are to be discussed by L. D. Caskey of the Boston Museum of Fine Arts and B. H. Hill of the American School at Athens. George H. Chase ("A Bronze Cista belonging to James Loeb"), Francis G. Fitzpatrick ("Byzantine Architecture in France"), and Kendall H. Smith ("Unpublished Transcriptions from Corinth") are the Harvard representatives; and Arthur Fairbanks will treat of "A New Marble in the Boston Museum of Fine Arts." Arthur L. Frothingham will read two papers, of which the titles are not yet announced. Other papers are: "Recently Published Measurements Relating to the Leaning Tower of Pisa and the Pisa Cathedral," William H. Goodyear; "The Tano Language of New Mexico," John P. Harrington; "Identification of the Persons Represented upon the Attic Grave Reliefs," Harold R. Hastings; "The Excavations of the School of American Archæology in 1909," Edgar L. Hewett; "Esoteric Doctrines of the Eleusinian Mysteries," Thomas Spencer Jerome (to be read by M. L. D'Ooge); "The Side Entrance to the Stage of the Roman Theatre," Charles Knapp; "The Correlation of Maya and Christian Chronology," Sylvanus C. Morley; "The Story of a Grease Spot," William Peterson; "Reconstruction of the Later Toga," C. F. Ross; "Hercules and Samson," Martin L. Rouse; "Architecture on Attic Vases," F. B. Tarbell; "Some Problems in Mediæval Vaulting," Clarence Ward; "Sources of Gothic Sculpture," F. D. Washburn, and a "Note on a Scyphus in Boston," James R. Wheeler. Many of the papers will be illustrated by the stereopticon.

In connection with the celebration of the fiftieth anniversary of the proclamation of Italian unity, in 1910, an international art and architectural exhibition will be held. An international competition of more than common interest will be that for the building of a "Modern House." The purpose of this competition is to afford "the best criterions for the building of a modern house, in order to attest, with the originality of the architectural models, the variety of the decoration and the elegance and practical usefulness of the furniture, the progress that has been realized during the last thirty years in this kind of building, and to display the latest productions and needs of civilization in the various nations." Three prizes of 150,000, 100,000, and 50,000 lire will be awarded. There will also be other prizes.

George Hay Brown, landscape gardener of public grounds and buildings in Washington, died at his home in that city November 23. He was born in Edinburgh in 1838, and was himself the son of a landscape gardener. The public grounds of the White House and of the Capitol were laid out under his direction, and he was superintendent of the Washington Botanic Garden.

The sculptor-decorator Alfred Darvant has died at Paris, aged sixty-nine. He was a collaborator with Charles Garnier during many years, and executed the decorations of the foyer and of the exterior of the Grand Opéra, at Paris; the Hôtel de la Monnaie, at Brussels, and the restoration of the amphitheatre at Orange, and of the Porte Saint-Denis, the Panthéon, and the Hôtel des Invalides, at Paris.

Cyprien Godebski, the sculptor, who was born in 1835 at Méry-sur-Cher, France, died at Paris November 26. His works are to be seen at Lemberg, in Galicia; at the Viennese Arsenal; in the Cathedral of Warsaw, etc. He was the sculptor of the monument to Théophile Gautier at the Cimitière du Nord, in Paris; and many of his portrait-busts and other works have been shown at the exhibitions in Paris since 1857. At the centennial exhibition in Philadelphia he received a medal for marbles shown there.

Sigismond V. Myrton-Michalski, the Polish painter, has died at Paris. He was a member of the Société Nationale des Beaux-Arts, at whose last exhibition he showed two portraits.

Finance.

STANDARD OIL DECISION AND FINANCIAL MARKETS.

In response to the Circuit Court's decision against the Standard Oil Company on Saturday, November 13, such declines occurred, in the closing hour that day, as 2¾ points in Amalgamated Copper, 1⅞ in Steel, 2⅜ in Union Pacific, and 5 in Reading. On Monday there was another break—Amalgamated falling 2⅝, Steel and Union Pacific 2 each, and numerous other stocks a point or more. Recovering partly from the lower level, during the next few days, the stock market on Monday and Tuesday of the present week saw another violent decline, in which the Steel shares fell 3½ points, Amalgamated Copper 3¼, Reading 5¾, and Union Pacific 2½. This further break caused anxious inquiry as to the probable ultimate effect of the decision.

Such a question can be answered only in the light of experience, and our markets have had two experiences in point. One came when the Federal Circuit Court, on Thursday, April 9, 1903, decided the Northern Securities case against the company. Like last Saturday's decision, the decision of 1903 became known shortly before the market's close. It caused some weakness then. Friday and Saturday were holidays. On Monday there was a violent break, running in a day or two to 5 or 6 points in the active stocks. The next week, part of these losses were recovered. But the break began again in May; one began to hear of "rich men's panic"; declines of 15 to 30 points were made before the year was over. and in the autumn, not only the Stock Exchange, but important industries, were in the grasp of severe depression.

The other precedent occurred when the Supreme Court, on Monday, March 14, 1904, sustained the Circuit Court's decision. Wall Street had waited anxiously for weeks; the stock market had almost ceased to move. The news, when it came, was received with dismay; yet prices refused to decline. After a day of absolute inactivity, the market suddenly began to rise. It developed such violent activity that within a month such advices as 9 points in Pennsylvania and Atchison had been scored, 10 in St. Paul, and 16 in Union Pacific, while volume of daily trading, from 74,000 shares on Thursday, March 10, rose to 1,338,000 on the 22d. In the longer sequel, there was a continuous "bull movement" up to the middle of December, with steady improvement in real industrial conditions.

What was the reason for so oddly different a reception of the news on the two occasions? Wall Street said that Judge Brewer's deciding opinion of 1904 was conservative, and made much of Attorney-General Knox's promise that the government did not intend to "run amuck." But there were also many experienced observers who pointed out that the decision of 1903 came on a market overloaded with "undigested securities," with a surplus bank reserve of only $2,130,000, and a very recent call money rate of 15 per cent.; whereas the decision of 1904 arrived when a six-months' liquidation was complete, unwieldy speculative accounts cleaned up, call money 1½ per cent., and the surplus bank reserve at $27,000,000.

This comparison leads to the question, which of those two periods most resembles the present? So far as the money market is concerned, it cannot be said that the comparison is all that one might wish. Credit facilities have notoriously been much abused in the great Wall Street speculation of the few past months. The New York bank position has been so far strained that a deficit in reserves has been averted only through the most industrious recourse to lending institutions outside of our own market —this at times when their own domestic requirements would naturally have made them reluctant lenders here. By virtue of such expedients, the surplus reserve has been maintained; but a familiar sign of an ill-adjusted New York bank position, the excess of loans over deposits, has presented itself in the rise of such disparity from $2,500,000 on October 30 to $20,400,000 on November 27, as against $84,000,000 excess of deposits over loans a year ago last week, when the actual surplus reserve was only $12,000,000 over to-day's. This, and the cognate fact of a stock market held at high prices for many weeks through very artificial manipulation, goes far to explain the weakness on the Stock Exchange, as contrasted with the rising prices which followed the Northern Securities decision of 1904.

On the other hand, the present situation cannot fairly be paralleled by that which existed in 1903. That was the climax of an orgie of promotion and speculation, which had covered nearly four preceding years, and whose scope and recklessness have rarely been matched. Nothing akin to this has occurred in 1909. "Promoting schemes" have been largely in abeyance. Bad banking, in the sense applied to the exploits of 1901 and 1902, has not been indulged in. More than all else, the financial and industrial revival which has inspired the recent demand on facilities of credit followed a period of thorough-going liquidation and readjustment, so that the start was made from a sound and normal level. These facts, and the further fact of the country's unquestionably great agricultural prosperity—outside certain portions of the cotton belt—give ground for believing that the decline in prices, since the Standard Oil decision of November 13, is in reality merely the readjustment of the Stock Exchange, which was, in some shares, out of line with the real investment situation before the Circuit Court had acted. The fact that sensational declines have thus far been in the main restricted to a few stocks whose prices had been arbitrarily pushed up, while the general market had halted in its rise, points to the reasonableness of this conclusion.

BOOKS OF THE WEEK.

The Pilgrim Fathers

Their Church and Colony

By WINNIFRED COCKSHOTT, St. Hilda's Hall, Oxford.

With 12 illustrations. $2.50 net.

It is doubtful whether the work of the Pilgrim Fathers has had more influence in the religious or in the political world. How their work grew out of the social and religious condition of Elizabethan England, how deeply it was affected by their twelve years' sojourn in Holland, and how it bore fruit in their colony at Plymouth, can be rather suggested than discussed in a book of this length.

The Nation.

NEW YORK, THURSDAY, DECEMBER 9, 1909.

The Week.

Several important topics which President Taft was expected to deal with in his first annual message he reserves for later and special communications to Congress. The conservation policy is one of them; others are the Anti-Trust law and the Interstate Commerce act. The first result of this deliberate omission of exciting subjects is to cause the message to appear routine and unemotional. That of itself is not a bad thing. The country has not yet recovered an appetite for the highly spiced message of which it had more than enough in recent years. The proverb might be amended to read: "Happy the nation whose Presidential speeches and messages are dull." Yet there is, after all, one theme, and the chief one, in President Taft's message, which is so great a novelty that it might almost be called startling. We refer to his urgent demand that public expenditures be cut down. Not since President Cleveland has Congress heard anything like this from the White House. Moreover, he does not stop with singing the praises of economy merely in the abstract. He not only declares that savings are necessary, but shows how they may be made. By means of the so-called "budget committee" of the Cabinet, and through imperative directions to heads of departments, he has caused the knife to go deep into the estimates of public expenses. This total, as submitted to Congress by the Secretary of the Treasury, has been decreased from the last estimates of the Roosevelt Administration by more than $90,000,000, and is $42,000,000 under the actual appropriations for the current fiscal year. Even to have set such a mark for Congress to attain is a great political event. It gives firm Presidential sanction to retrenchment, and may help to bring back again the homely virtues of prudence and thrift in governmental affairs.

Economy and efficiency in the public service are the real watchwords of the message, though many other matters are touched upon. Of these, we shall here refer only to what the President says upon the tariff. First of all, he utters a reassuring word about the application of the maximum tariff in a retaliatory sense. Mr. Taft is not spoiling for a tariff war with other nations. Quite the reverse, he informs Congress: "I beg to express the hope and belief that no such result need be anticipated." Further, in dwelling upon the powers of the Tariff Commission, which the President thinks are ample, he says that "if the facts secured by the tariff board show generally that the rates of duty imposed by the present tariff are excessive, . . . I shall not hesitate to invite the attention of Congress to this fact, and to the necessity for action." This is a great advance over the Winona speech. It may not be a promise of definite tariff relief, but shows how it can be got, and faces in the right direction. It appears from his concluding paragraph that the President is troubled by the continuance of high and increasing prices. But he does not admit that this high cost of living is due to the tariff. Nor is it, in its entirety, for some prices have risen all over the world. But the President would not deny that the tariff on woollen goods, which he has publicly declared to be indefensible, compels Americans to pay exorbitant prices for woollen clothing or else wear cotton or shoddy. There we have at least one set of high prices for which the tariff is directly responsible.

The executive order providing a systematic method of appointments and promotions in the diplomatic service marks an important step toward making that career attractive to qualified young men. The scheme laid down contemplates more than the mere introduction of an examination system. Initial appointments from outside the service are to be made only to the lowest grades, and the Secretary of State is directed to report from time to time to the President the names of those who have demonstrated special capacity. Careful records of efficiency are to be kept, as a basis of recommendations for promotion; and all the secretaryships in the diplomatic service are to be graded according to their importance and difficulty, so that a transfer from one to another shall have a definite significance. The entrance examinations themselves will, of course, be of a character bearing expressly on the special needs of the diplomatic service; and provision is made for preventing the appointment of those who may have the ability to answer examination questions but have not the peculiar personal qualifications required, by limiting certifications to persons specially designated by the President, subject to examination and other tests.

A man has been found brave enough to dare to accept the mission to China. Marvellous to say, he, like Mr. Crane, comes from Chicago, and his heart is yet undeterred within him. The new appointment seems promising. Mr. W. J. Calhoun is not merely a lawyer of high repute; he has several times rendered governmental service. As special commissioner of President McKinley to Cuba, just before the outbreak of war, Mr. Calhoun made a report which did much to increase public indignation over conditions in that island. It is only fair to say, however, that this was written in a judicial tone, and criticised Cubans and Spaniards alike. For some time after the outbreak of war, he was a valued adviser of President McKinley, who, on March 8, 1898, appointed him Interstate Commerce Commissioner. This office he resigned in 1900. In the year 1905, President Roosevelt appointed him special commissioner to Venezuela. His judicial report upon conditions there is believed to have changed Mr. Roosevelt's intention to be very drastic with the ill-behaving Venezuelans. Mr. Calhoun is, therefore, not without diplomatic qualifications for his new post.

We regret to note that the Secretary of War supports in his annual report the pending bill to increase the army by 612 officers. That there is serious absenteeism is admitted—he reports 709 officers who are away from their organizations, among them not less than one-third of the captains of companies. Unfortunately, Secretary Dickinson, like his predecessors, believes that the only remedy is increasing the total number of officers. The history of the army has demonstrated, however, that this is no remedy at all, so long as the War

Department fails to set its face against useless and unnecessary details. When the number of officers for each regiment of cavalry and infantry was increased, on the reorganization of the army in 1901, it was on the distinct assurance of the War Department that the surplus officers would take care of all necessary details. If the Department continues to lend officers to committees of Congress, to so-called military schools, and for a dozen other non-military purposes, as instructors, the drain will continue. To-day, no less than twenty-nine officers are with the Panama Canal Commission, 105 on recruiting duty, and sixty-three at private schools. Secretary Dickinson is on the right track in asking that capable retired officers should be assigned to active duty temporarily. This he can do now only if the officers consent. Before deciding on an increase in officers which would be without parallel in any European service, Congress should begin by giving him this permission, letting him understand that unnecessary details should be cut off.

One recommendation for reform is not to be found in Secretary Meyer's preliminary statement of the coming reorganization of the Navy Department. There is no suggestion that the "political navy yards" which exist only by grace of the Senators and Congressmen in whose States they are located, be done away. The Secretary or the President with the moral courage to grapple with this question has not yet been found. Yet there lies an opportunity for enormous saving, to say nothing of the release of officers for other duties than policing obscure naval stations, such as that at New Orleans, or the one at Port Royal, South Carolina, whose useless drydock no battleship can reach on account of insufficient water in the channel. If manufacturing efficiency calls for the concentration of power plants in navy yards, the efficiency of the whole service demands the concentration of naval work at four or five yards at most. The reorganizers of the defunct United States Shipbuilding Company speedily found that the most economical way to handle those ship-yards which were worth keeping up was to let each yard do a specific work. Thus, one or two build large ships, one small vessels, another concentrates on repairs, and still another on equipments of various kinds. The Government should do likewise. There is nothing in the argument that in the event of war, it would be well to have a number of yards in case one might fall into the enemy's hands.

To most people, the news that J. Pierpont Morgan has purchased from Thomas F. Ryan the majority interest in the Equitable Life acquired by Ryan from James H. Hyde in 1905, has doubtless come as a great surprise. Those, however, who were fully conversant with the nature of the Ryan control knew that a change of some sort was inevitable. The deed of trust, whereby Ryan placed voting power over his Equitable stock in the hands of three trustees, was due to terminate on the 15th of next June. One of the three trustees, ex-President Cleveland, had died, and his place in the trust had not been filled. Ryan himself had been withdrawing from active business, and a belief had long existed that his Equitable holdings were for sale. The arrangement whereby control of the life insurance company should be independently exercised by Mr. Cleveland, Mr. Morgan J. O'Brien, and Mr. George Westinghouse was, in other words, a necessarily temporary expedient, and only a few months more remained to it. Conversion of the Equitable Life into a mutual organization, either through alteration of its charter, or through purchase of the Ryan stock by the company itself, had apparently been prevented by the courts, at the instance of minority shareholders. Mr. Morgan's purchase of control is a not unnatural sequel.

The President's recommendation concerning the Naval Observatory is eminently sound. He urges that the official head of that great astronomical establishment should be an eminent astronomer, and not a naval officer detailed for service for a shorter or longer term. This mode of filling the post of head of the Observatory could not have survived so long as it has were it not for the false notion conveyed in the name of the institution. As the President truly says, all the uses of the Observatory specifically related to the needs of the navy might be subserved at a small fraction of the present cost. The part it really plays is that of a great national observatory, and its material equipment is of a character befitting such a part. The President calls it "the most magnificent and expensive astronomical establishment in the world." Together with its important observational work is carried on the Nautical Almanac, in connection with which the labors of Simon Newcomb and of George W. Hill have made American mathematical astronomy illustrious the world over.

Importers of works of art are suffering the necessary inconveniences that accompany a reform, as well as some that are wholly unnecessary. That it should take a fortnight to get an old picture through the customs is perhaps due to the sudden increase of importation. Yet when one recalls that a skilled examiner should generally know offhand whether a picture is or is not twenty years old—the really ambiguous cases being very few—it seems certain that the organization of the customs is not adequate to the new work. If it were merely a question of waiting, doubtless the importers would possess their souls in patience. But an old painting on panel is about as perishable an import as a pineapple. What must have been the feeling of that dealer who, after waiting a month, received three old Dutch paintings which had entered the public stores intact, cracked from top to bottom? It is idle to say that he may sue the Government. That may or may not indemnify him for his loss. But damage of this sort cannot be reckoned merely in dollars. To deface a fine picture diminishes the resources of civilization itself. We know of four notable pictures that have been thus injured—in every case it seems through heat—while in the custody of the government. For these delicate objects either a special storeroom at a low and equable temperature should be provided, or, if that be impracticable, some system of prompt release under bond should be devised.

The brusqueness of Secretary Knox's dealings with Nicaragua would appear heightened if it should prove to be true, as reported, that the Mexican Government was not consulted and does not wholly approve of the steps that have been taken. Mexico as well as the United States was interested in the Central American treaty of peace and amity which was signed at Washington in 1907. It was a part of the skill with which Secretary Root conducted the ne-

gotiations that he was able to induce the Mexican Government to appear alongside ours in urging the five republics to agree to leave off their chronic revolutionary and filibuster habits. Mexico is their nearest neighbor, territorially, and her joining with us gave the movement for assuring peace in Central America an air of sincerity which otherwise it might not have worn. And it was so obviously the thing to do to keep the Mexican Government fully advised of the whole situation and of the intentions of the Administration that we can hardly believe that Secretary Knox omitted this precaution. If it be true, as Napoleon said, that imagination rules the world, it is nowhere more true than in the world of diplomacy. No foreign minister should fix his eyes on business to the neglect of sentiment. And it is already plain from the expressions of those entitled to speak for the feelings of South Americans, that the effect of Secretary Knox's proceedings may be greater upon their imagination than upon actual conditions in Nicaragua.

Mr. Asquith's followers are much encouraged by the promise of hearty cooperation held out by the spokesman of the Labor party in the House of Commons. The Labor influence is important not only on account of the fifty and odd seats it now controls in Parliament, but because of the many doubtful constituencies it can swing to either of the two great parties. The question is whether the Labor leaders feel that the present constitutional crisis threatens their own ultimate interests to an extent warranting the sacrifice of immediate party advantages to the common Liberal cause. It has been argued, for instance, that the Labor party, like the Irish party, would be happy to see a large reduction in the present Liberal majority; that would mean the balance of power in the hands of the small third parties. It may also be argued that if the Laborites can increase their own Parliamentary representation by a score of votes, they can even afford to see a Conservative Ministry in power. That would be a policy of indifference as to who rules the roost until the time when the Labor party is itself strong enough to think of office. But, on the other hand, the Labor leaders cannot overlook the fact that a victory for the House of Lords would mean a reaction which would take years to stem.

It has repeatedly been shown that people can be more royalist than the King himself. Hungary is now in the midst of a political crisis centring about the question whether it is possible for a politician to be more Kossuthian than Kossuth himself. In 1906 the Independent party, under the leadership of Francis Kossuth, a son of the patriot leader of 1848, secured a majority in the Hungarian lower house, and Francis Kossuth became practically the leading spirit in a coalition Ministry of Independents and Liberals pledged to the establishment of universal suffrage and the reconstruction of the economic arrangements with Austria. No serious endeavor was made to redeem the promise of electoral reform, and the prestige of the majority also suffered from dissensions within the Independent ranks. As a result, the Wekerle Cabinet resigned early in the present year and an interim Ministry was installed. The break within the Independence party has come over the question of a separate Hungarian Bank which the extremists, led by De Justh, the former president of the Chamber, wish to see established by January 1, 1911. The project was opposed as impossible by Francis Kossuth, who, however, has been unable to carry the majority of the party with him. Kossuth accused his followers of treachery and declared that without the prestige of his name most of them could not have made their way into Parliament. Whereupon the Justh faction accused Kossuth of being recreant to the principles of his famous sire, because of his lukewarm defence of Magyar interests. There are now, therefore, an Independence and 1848 party, led by De Justh, and an Independence, 1848, and Kossuth party under the old leadership. The prospects for a stable Ministry in the immediate future are not bright.

Premier Giolitti, who resigned office last week, has been the dominating figure in Italian politics since 1901, when he entered the Zanardelli Cabinet as Minister of the Interior. In 1903 he formed a Cabinet of his own, and with a year's interval in 1905-6 he has remained at the head of the Government. The combination against Giolitti shows an odd alliance of Constitutional Liberals, Republicans, and Socialists, reinforced probably by the "fluid" vote that always inclines towards the victorious side. The specific question on which the Government has found itself weak is its ship-subsidies bill, in which it is accused of having made favorites of certain shipping interests. Giolitti might have saved himself by throwing over the unpopular members of his Cabinet, the Minister of Posts and Telegraphs, who negotiated the subsidy arrangements, the Minister of Instruction, who has antagonized the Anti-Clericals, and the Minister of Agriculture and Industry, who has against him popular opinion in Sicily. The chances are, however, that Giolitti's retirement means only a brief vacation. The Opposition may form a temporary coalition Ministry, but it is evident that the Anti-Clerical Socialists and Republicans cannot work together with the Constitutional Liberal leader, Baron Sonnino, who is strongly opposed to a hostile policy towards the church.

A contributor to the *Revue Bleue* writes that, with the exception of the nobility and the purveyors to their Christian majesties, "no one in Spain is interested in King or Queen, or royal infants." He recalls the words of Ferdinand VII: "Spain is a bottle of beer, and I am the cork," and puts them into the young King's mouth. It may be granted that the patience of the country has been sorely tried; that cynicism is, perhaps, a natural enough philosophy for the Peninsula. But let it be noted that "the protests abroad prove that there is a common patrimony of liberty and democracy," as the Madrid *Imparcial* has declared. The Pyrenees are no longer a perfect insulation. If the present situation does not inspire overpowering optimism, yet the throwing down of the barrier is itself evidence against generalizations of a too sombre kind. During the regency were realized important domestic reforms. Under Maria Christina revolution was subdued to evolution: the Anglo-Saxon method, as we like to think. There is no need to be too despondent over Spain's future. The good work of years is not to be effaced in months. Already the new Liberal Government is at work, and the wide extension of local rights and home rule just announced by Premier Moret may be an earnest of good things to come.

SOCIALISM AND HUMAN NATURE.

"After all," says an able and effective writer in the *Contemporary Review*, "those who want Socialism want it because they want liberty, because they are tired of being crushed and thwarted in a confused and planless world where men and peoples struggle and die without knowing for what they struggle or why they live." The sentiment is fine, and it undoubtedly underlies the attitude of the finest and highest spirits among those who to-day range themselves more or less completely on the side of Socialism. But what assurance have they that any socialistic reconstitution of society would furnish that basis of life which they crave? What reason have they to think that, in the new world they dream of, men would be penetrated with a knowledge of "what they struggle for and why they live"? In Edward Bellamy's phantasy, to be sure, there was to be nothing that could properly be called struggle at all; and it is the unattractiveness of such a world to men of vigorous nature which partly accounts for the rapid dying out of interest in that kind of Utopia. But, struggle or no struggle, how are we to infuse into the material world around us, or into the institutions of society, that which will give to human life an absolute foundation? That no such foundation exists to-day, Socialist enthusiasts have no difficulty in showing; but that any change in social arrangements will bring about a state of things in which men will know a whit better than they now do "for what they struggle and why they live," none of these writers gives us the faintest reason for believing. Men may be happier or less happy; they may be better or worse; but the meaning and purpose of life will remain, just as it has always been, a mystery illumined only by the inward experiences of each individual. To imagine that any contrivance can supply us with a full solution of the problem of human existence is to indulge a childish delusion.

Perhaps the one man who has most consistently held up an ideal of life freed from the meaningless complexities of modern civilization is Tolstoy. The typical Socialist is set aglow by dreams of the beauty that might be breathed into the lives of all men if only the conquests of science and invention were properly utilized for the broadening of every man's horizon, the enrichment of every man's opportunities! Tolstoy sees hope only in the abandonment of all the vanities of learning and art, all the endless developments of scientific progress, and in the devotion of mankind to the pursuit of the simplest duties and the cultivation of the simplest virtues. The ordinary Socialist holds that when progress has done her perfect work, all mankind will be emancipated, as a fortunate minority now are, from the dull pressure of exacting toil; and he assumes that this freedom will carry with it true felicity. Tolstoy believes that only in the common performance of homely tasks is the salvation of men to be found. The two views differ diametrically as to the means by which the goal is to be attained; but the goal in both cases is the same. That goal is a condition of the world in which the activities of life shall give to the soul of man a satisfaction different not merely in degree, but in kind, from that which man has hitherto enjoyed; different in kind because the satisfaction is definite where it is now vague and elusive, absolute where it is now relative.

An interesting exposition of Tolstoy's attitude, in the form of a letter to a peasant, appeared recently in the *Times*. That science is not only vain, but harmful; that its development has been but part of the exploitation of the poor by the rich; that the only true science is that which teaches man "how to live true to conscience, before God, his appointed term of life"—these familiar Tolstoyan doctrines are, of course, set forth. "People need only cease to believe in the science introduced by force and by rewards, and not study it, but keep to the one free science" of right living, and the existing wretchedness of the great mass of mankind will "vanish of itself." How purely this belief of Tolstoy's as to the future is an act of faith, may, perhaps, be best inferred from a single instance. He has been bitterly denouncing the desire of any workingman for education, based upon the deceitful plea that this education will be used in the service of the people; what really happens, he says, is merely that one of the oppressed becomes one of the oppressors. The poor he describes as "the half-naked, half-famished, dirty, never-resting, illiterate men, made dependent for life by poverty, who work sixteen hours a day for two rubles a week." And it does not seem to occur to Tolstoy that it is only in Russia, where popular education is unknown, that even the most extravagant agitator would dream of so describing the condition of the working masses; nor that the superiority of the state of the people in countries in which modern ideas of science are predominant has any bearing on his notion that science is the handmaiden of robbery.

The usual Socialist millennium centres, as does Tolstoy's, upon the thought of a fundamental harmony running through the whole life of society and giving to human existence a significance to which, under present conditions, it can lay no claim. But whether such harmony as is aimed at in either case, supposing it attainable, would truly satisfy the longings of human nature is a question on which either gives us little help. In this same letter of Tolstoy's may be found an unconscious confession that his own idea does not satisfy his instinctive feeling of the needs of human nature. There will always, he tells us, be plenty of work to do:

> That work will consist of making clear to every man what he must do that none should be hungry or deprived of the use of the land on which they were born, that there should be no women giving up their bodies to dishonor, that the temptations to intoxication, alcohol, opium, and tobacco should not exist, that men should not be divided into hostile nations, that there should be no murder of foreigners in war, and of one's own people on gallows or guillotines, that there should be no religious deceptions, and many other things.

What is this but an admission that not a state of perfection, but of imperfection, not a grand unbroken harmony, but struggle and trial, not the absence of temptation and hardships, but the fight to overcome them, is necessary to the exercise of man's vital forces, the working out of man's nature? And this once admitted, what becomes of the arraignment of the present condition of society because it does not give life an absolute meaning, does not enable men to know "for what they struggle and why they live"?

BOOKER WASHINGTON'S GREATEST SERVICE.

The remarkable success of Booker T. Washington's latest speaking-tour in the South emphasizes again his usefulness to the whole country. In this rôle as an interpreter of one race to another,

pleading for harmony, mutual respect, and justice, he is performing a patriotic service which it would be hard to overestimate. One of the foremost white educators now at work in the South exclaimed on hearing of the details of Mr. Washington's recent trip through Tennessee: "Now I believe there is going to be a revolution in the South in favor of the negro." Of the fifty thousand persons who, it is estimated, attended his meetings, nearly one-half were white; and in every case he was received with an enthusiasm which would have turned the head of any less balanced and sagacious leader.

Lest we be accused of exaggeration, we would remind our readers that Judge Floyd Estill, at Winchester, Tennessee, introduced Washington the negro, once a homeless and destitute wanderer, as "a fine type of the true Southern gentleman"; that Judge J. H. Price, another typical Southerner of high position, classed Booker Washington with the first President, with Thomas Jefferson, Madison, and Monroe, Lee, and other Virginia worthies, as among that State's most distinguished sons; and that Judge J. M. Steen of the Circuit Court introduced him with these words:

> We believe that as the patriarchs of old were inspired by God to lead their people out of darkness into light, to guide them on the right road to right living and success, so he who is to speak to us to-night is inspired to lead his race to higher, better things. But his message is not for you alone. It is not alone for this city or this State. By helping you he helps us; by helping you he helps every man, woman, and child in all this broad land of ours.

All of this is enough to make any man accustomed to the ravings of the ordinary Southern office-seeker, or firebrand lecturer of the Tillman order, rub his eyes and ask whether a revolution is not actually at hand. Yet these compliments to Mr. Washington and his work were received with the heartiest approval by thousands of earnest white listeners.

Still, this turning to Mr. Washington by such men of prominence ought not to surprise us. It is just the better self of the South coming to the front. Men like the judges we have quoted have come to see that if the races are to live in peace and comfort, the negroes who are progressing, who are laboring in Mr. Washington's spirit, must be sustained and upheld. More and more, too, men of standing are bound to recognize the obligation the South owes to the negro. Speaking at Brownsville in Mr. Washington's presence, Judge John R. Bond of the Tennessee Circuit Court said: "I was born and reared here in the South, and have associated all of my life with negroes. I feel that as a Southern white man I owe a debt to the negro I can never repay." His gratitude was specially for the way in which the negroes protected and cared for the white women and children who were left at home during the war. But there is even a higher and more sacred obligation than that—the duty of caring for a backward race because it is backward, and of helping it onward and upward. The man who would injure a defective or crippled child must be an outcast from society; the time will come when all nations will take a similar attitude towards those human beings who are handicapped, particularly if, as in the case of our negro, their plight is largely no fault of their own.

To this quiet but ever-present appeal the true Southern gentleman is bound to respond, because he has a heart, because essentially he believes in fair play, and because he is an American. Further proof of this lies in the space given to Mr. Washington's trips in South Carolina, in Virginia, in Mississippi, and in Tennessee, by the newspapers of those sections. The Tennessee press has yielded to Mr. Washington its first pages and reported his speeches in full, even where the proceedings called for four or more columns. At Charleston, last winter, the prominent editors joined the Mayor in welcoming the colored orator; in Tennessee the editors have sat upon his platforms. More than that, the Memphis *Commercial-Appeal* has recently honored itself and its profession by instructing its correspondents to bear down as lightly as possible upon negro crime and to say as much as possible about negro strivings for betterment. The Nashville *Banner* is another journal that is doing its best to be just to the negro, and trying not to lay undue stress upon the crimes of the rascals who disgrace their race—just as there are plenty of white men who do the devil's work. The Columbia *State* has also long battled for fair play; recently it has incurred unmerited criticism for denouncing the unjust punishment of a negro because he was a negro.

To come back to Mr. Washington, the greatest service he can render to-day is plainly not at Tuskegee, and not at the White House conferring as to appointments, but on the stump in the South. His bearing and popularity enable white men to speak out freely where it would sometimes be difficult to do so if the negro endorsed were less well known. Public opinion is far more dreaded in the South than in the North; it takes vastly more courage there to break the bonds of custom and habit than anywhere else in this country, for social ostracism is more quickly brought to bear. Let him who doubts this read Walter Page's new novel, "The Southerner." The reason why the educator we have quoted sees a revolution coming is because Southern men everywhere are beginning to break away from the conventions, even the terrorism, which have kept them silent heretofore. At any rate, Mr. Washington is to-day a great interpreter and leader. This must be recognized, whether one agrees with him in all his views or not. It is just fifty years since the death of John Brown; who could have thought in 1859 that a colored man in 1909 would have so won the gratitude and esteem of the nation?

THE ENGLISH CRISIS.

Thoroughly discounted as last week's vote in the House of Lords had been, it yet came at the end with the sense of a great historic event. It marks the imminence of a vital change in the English Constitution. Say what one will, the Lords have violated the unbroken precedent of years. They have laid rude hands on a Money Bill. This is an act which all the text-book writers, of whatever party, and a long line of statesmen, whether Liberal or Conservative—including among the latter Lord Salisbury and Mr. Balfour himself—have declared to be beyond the competence of the upper chamber. Constitutionally, we are in the presence of an indubitable revolution. The Lords have the legal power to throw out the budget, in the sense that without their consent, and the King's, it cannot become law, but the constitutional doctrine is firmly established that they have no longer the right to withhold their consent to a money bill which has passed the Commons, any more than has the King. From the standpoint of the English Constitution, the Lords

are wholly and hopelessly in the wrong. If that Constitution were written as ours is, and enforceable by a suit in a Supreme Court, there can be no doubt that the action of the Lords would be declared null and void.

In England, however, the Constitution is not only unwritten, but fluid and changeable. The English court of last resort is the English democracy. This is shrewdly recognized by the terms of the motion adopted by the Lords, namely, that they would not accept the budget until it had been passed upon by the people. Thus the aristocratic house would seek to appear more democratic than the Commons. But it may be retorted that this semblance of deference to the democracy is a sham. The Lords profess to appeal to the mass of voters, but in reality they are acting in a way to deprive one-half the voters of the effectiveness of their ballot. That is to say, Liberal votes will not hereafter count, in the matter of taxing, if a permanently Conservative and non-elective House of Lords may reject any taxes of which it does not approve. The sort of referendum on the budget which the Lords are blandly proposing is only a half-way thing. It is logically and politically necessary to go further. The electors will pronounce on the whole Constitutional issue, which runs far beyond this year's budget; and will, if they sustain the Liberal party, make it certain that sweeping guarantees against meddling by the Lords will be exacted. This, then, is the far-reaching question which will soon be passed upon in a general election. From it, the House of Lords may emerge, either with its powers enlarged and its prestige enormously enhanced, or so discredited that it will remain in the English system as little more than a gilded nullity.

Yet we must be on our guard against exaggerating the crisis by taking it for granted that the English will suddenly become doctrinaire and apply root-and-branch methods. Walter Bagehot publicly thanked God that his countrymen never mixed logic with their politics, and we may be sure that they will not begin to do so overnight. Extremists on both sides will prophesy dire things in the course of the impending campaign, but it may well prove that the ingrained English moderation will not permit violent extremes in either direction. On the one hand, we have the picture, in the event of Liberal success, of a single-chamber government driven into wild Socialistic excesses. But no electioneering oratory will persuade sober Englishmen that anything like that can result. The other picture is of an hereditary House of Lords, emboldened by its great triumph, if the Conservatives win, setting itself up haughtily above the Commons in all matters. But that is also too lurid. Mr. Balfour himself, if he were to become Prime Minister again, might easily be the first to read the overweening Lords a severe lesson, and to threaten them with all kinds of pains and penalties if they thought to ignore or over-ride the wishes of the directly elected representatives of the people of England.

It is evident, too, that this practical English good sense will be applied to the immediate problem of the financial confusion caused by the rejection of the budget. This has been called "chaos," and it might easily be made so by the Ministry. With the failure of the budget, all the annual and increased taxes collected since last April are illegally in the Treasury and could be recovered by a suit at law. Their total amount the *Economist* reckons at more than $250,000,000; and there would also be the rest of the fiscal year to provide for. To raise this large sum by a loan or Treasury Bills would be awkward. But the Government has already notified importers of tea that the tea duties will surely be validated, and it is reported that the income tax will go on being collected without protest. It might be thought good tactics for the Liberal Cabinet to make the financial situation created by the Lords appear as bad as possible; but the leaders of a party which stands for good order and sound finance do well to show that they are prepared to do everything in their power to minimize the disturbance. Liberal hopes and the Liberal cause do not depend upon inflaming men's minds about disordered finances.

The coming contest is one into which the Liberals will enter unitedly and with high spirit. They could not have asked better ground on which to fight. Six months ago, everything was going against the party in power. As Lord Morley is reported to have said in private, whatever the Government undertook to do seemed to be unpopular. Bye-elections were running against them heavily. But the budget and the conflict with the Lords have changed the whole face of the political sky. Where the election prophets were saying a year ago that the Liberals were certain to be severely beaten at the next general election, they now forecast a Liberal majority—though, of course, much reduced from that of 1906. Whatever the outcome, the struggle will be of intense interest because such great issues and momentous consequences are involved. The thrilling watchwords which the Liberals now have at their command have not echoed in England since 1832. Americans have special reason to follow the political battle with eagerness, since it is certain that the high debate on popular rights and on taxing accumulated wealth cannot fail to have a powerful influence in this country. We in the United States shall soon have these burning questions thrust upon us also.

READING FOR CHILDREN.

We Americans are wont to assent, shamefacedly enough, to the reflections made by foreign criticism upon our conduct of the business of parentage. Our children are seen and very much heard, they are ill-mannered, conceited, insubordinate—tyrants of the household. Their chief hope, not, to be sure, of good manners, but of decent citizenship, lies in the curiously strict discipline provided by our public-school system. Confessing our individual inadequacy, we appoint a formidable pedagogue whose duty it is not merely to teach the young idea how to shoot, but to teach the young will how to submit. Later, the business is taken up by experience—by the exactions of business and social life. In the end our children turn out much better than we have any reason to expect, much better, certainly, than we deserve. As individuals, we have done what we could to make nuisances of them.

In some such guise we must see ourselves as others see us; and how shall we make denial of it as a totally false presentment? There is, no doubt, a tit for tat. Our feebly good-natured handling of children is, we may retort, due to our acceptance of children as the staples of domestic life. Among other peoples, it seems to us that they are oftenest regarded as necessary but inconvenient incidents. The English child of the better class, as we see him in fic-

tion, is pretty strictly confined to the nursery and the playground until the wished-for hour arrives of his dismissal to the public school. At intervals his "gov'nor" recognizes his existence with a pat on the head, a platitude, or a fiver. And his memories of childhood are touched with dreamy visions of "the mater" in a ball-gown momentarily (and not without sentiment) inspecting her safely dormant offspring as she passes to the real business of life. This sort of casual acquaintance between parent and child does not seem to exhaust the possibilities of the relationship. We flatter ourselves that the American child knows its own father, at all events, and we look askance at the importation of the foreign method among our "best people."

But we confess certain misgivings as to our own wisdom. It is to be hoped that the alien observer may have noted a cheering sign or two of late, as, for example, our growing sentiment against the Comic Supplement. This offence has become so extreme as actually to bring itself home to our nostrils. But the source of it, the root from which it springs, and which it brings to a horrid efflorescence, is perhaps less generally perceived.

Much nonsense has been put forth about the regulation of children's reading. This is a late day to attempt a rigid censorship of an urchin's literary acquaintances, and as for leading him, there is probably no method better than that of our grandfathers—to turn him loose in a man's library and let him taste its strong fare. For the rest, any normal boy ought to relish the absurdities of the dime novel, and any natural girl ought to be able to wallow in the sentimental fairy tale. Blood-curdling adventure is as necessary to the diet of the one as sugary romance is to that of the other. Even the watery pap provided by the average Christmas book or in the pages of the ordinary children's publication, probably does little harm if less good to the adolescent morale.

But we have a class of writers "for youth" whose influence is really demoralizing. It is their postulate which the Comic Supplement develops to the point of nausea. We mean that order of scribbling parasites who make a business of flattering children into the belief, or the "working hypothesis," that they are wiser and better than their elders.

Honest parent, do you know why your boy likes Horatio Alger? Did you ever read "Do or Dare," or one of its congeners? If so, you realize that a large part of the charm lies in the superiority under all circumstances of the youthful hero. His father, or guardian, or employer, is a grown man, and, as such, either a fool or a tyrant—preferably a little of each. The boy himself, from the first page, is exhibited in the enviable act of doing or daring his elders at every possible turn. There is no danger for him in "sassing back." No shingle is ever permitted to fall upon his sacred person; he is immune from all the ills that a mortal puerility is naturally heir to. In short, he is the kind of fellow a fellow would like to be. The same bauble of triumphant adolescence is dangled before the fancy of the girl reader. We have been moved to these remarks by chance contact with a new story by a popular writer for girls. The heroine has always been downtrodden by a heartless and stingy mother. We have the advantage of admittance to the scene at the moment when the worm turns. After the first few pages we have nothing to fear for the daughter, who thereafter has everything her own way—a selfish, vain, saucy little prig, greatly admired, to all appearances, by her creator, who does not hesitate to describe her as "living the Golden Rule." It is hard to believe in the honesty of the purveyor of this sort of commodity. We do not see that he is to be distinguished in kind from those notorious offenders who are guilty of the red and yellow enormities of the Comic Supplement.

GOOD LETTER-WRITING.

"Authors, my altogether dear woman, can't write letters. At best they squeeze out an essay now and then." James Russell Lowell wrote to this effect precisely forty years ago, in addressing Miss Norton; and he added: "They are thinking of their punctuation, of crossing their *t*'s and dotting their *i*'s, and cannot altogether forget themselves in their correspondent, which I take to be the true recipe." The assertion of fact is true enough: the writer of good books is not necessarily a good letter-writer. He is even apt to be, like Dr. Holmes, only "a very good correspondent *as a reader* of letters." But with Lowell's explanatory principle one is tempted to quarrel. The best letter-writer does not forget himself in his correspondent: he leaves it to his correspondent to do the forgetting. And while on the subject of rules for letter-writing, let us not overlook James Howell: "A Letter or Epistle should be short-coated, and closely couch'd; a Hungerlin becomes a Letter more handsomely than a gown."

Such recollections come to one who reads Lafcadio Hearn's "Japanese Letters" in the current *Atlantic Monthly*, with an introduction by Elizabeth Bisland. "Great letter-writers, like other artists," observes Miss Bisland, "must needs have the original birth-gift; but this gift, to ripen to complete fruition, requires certain fostering circumstances." Some loneliness of character or of condition is one of these "fostering circumstances": either shyness, or a lack of ease in oral expression, or want of sympathetic companionship. "Madame de Sévigné and Lord Chesterfield were both reported stiff and dry in conversation," says Miss Bisland; "FitzGerald was exaggeratedly diffident. Lamb's family sorrows forced him to turn to others for intimate intercourse; and the same was true of Thackeray. Stevenson's long exile made his pen his best means of fellowship." All this is not pure theory. To expect the ordinary "literary man" to write letters is, commonly, much like expecting the carpenter to spend his holidays (as Gautier expressed it) "planing boards for the fun of it." He demands a special provocation, an eloquent incitement.

Such an incitement or inspiration was Lafcadio Hearn's. "His shyness was extreme," as one testifies who knew him well. "His life, from his nineteenth year, was a sojourn in foreign lands. Without family ties for twenty years, those ties, when formed in middle age, bound him to aliens in race and tongue." He attained to a greater intuitive knowledge of the Japanese than it has been given to other Occidental men to have. Yet he never so mastered the language as to be able freely to express his thoughts in the tongue of his wife and children. "I'm writing," he told Professor Chamberlain of the Imperial University, in one of the newly published letters, "just because I feel lonesome. . . . However, if I can amuse you at all, you will forgive me." Forgive him? One may easily answer for Chamberlain as to

that. What is more, it is easy to pity him, that subtle colorist and etcher:

> The illusions are forever over; but the memory of many pleasant things remains. I know much more about the Japanese than I did a year ago; and still I am far from understanding them well. Even my own little wife is somewhat mysterious still to me, though always in a lovable way.

Hearn is not, we think, one of the greatest English letter-writers, although some of his letters written from New Orleans shake us in that opinion. Certainly his letters have always a fascinating subject-matter; it was his to live in strange places, to read strange books, to eat forbidden fruits. His correspondence is, finally, to be treasured as no other writer's since Edward FitzGerald. In it, one finds the same vivid color and flexible craftsmanship with which we made acquaintance in his tales of old Japan, and in his essays and travel-sketches. When other letters were published, three years ago, we called his touch "magic," and we reiterate the word. Nor was he writing for the public: only out of his great love for friends, and out of his pitiable loneliness. Here was one letter-writing author unpreoccupied with his punctuation; one whose thought went farther than the "crossing of his *t*'s and dotting of his *i*'s." And yet, in him, we have one of our rare writers with an artistic conscience: a faculty that we have lost in this era of "virile" style, masking a literary anæmia.

JESSIE WHITE MARIO.

I.

The historian of the great modern national movements finds himself perplexed by being obliged at every moment to discriminate or to strike the balance between Reason and Emotion—the two elements out of which human events are spun. They may be allies—but more often they are antagonists; and although either may give the impetus to a social or political revolution, the other may finally control it. As mankind in the mass has always acted from the emotions much more than from reason, history, to be lifelike, should be rich in emotional data. Needless to say, however, these are usually the hardest to recover. The result is that most written histories have an orderly, almost cut-and-dried character which rarely belonged to history in the making. Rarely, too, would the actors in an historic movement recognize themselves as moving from point to point with the imposing inevitableness with which the logical historian endues their action.

No recent historical period, not even that of the French Revolution, was so surcharged with emotion as was the Italian Risorgimento. To understand the course of its events, at least from 1815 to 1848, one needs, above all, to know the emotions which underlay Italian patriots. In some fashion, we may describe the struggle as a conflict between the New, intoxicated with Emotion, and the Old, shut up in a strait-jacket of Reason which no longer served the common needs. For though Reason may be infinite and eternal, those special bits of it which men isolate for the purposes of a party or for a time, are not: and the Reason which had once sufficed to make absolutism acceptable to entire nations, was now regarded as a hideous perversion.

It is just because Jessie White Mario so typically embodied the emotions which ruled one of the great divisions of Italian patriots that her life has a significance far more important than any of her actual deeds. Perhaps the fact that she was an Englishwoman who adopted the cause of Italy with all the fire of an unusually vehement nature, makes her Italianism a little more salient than that of the Italians themselves. The zeal of the convert is proverbially thorough; Jessie White was not, in one sense, a convert, for her love of freedom and her belief in brotherhood and equality were inborn; but Italy became the object on which she lavished her devotion to these ideals, and which she felt doubly bound to defend.

Her last volume, which has been admirably compiled by Duke Litta*, is less autobiographical than those of us who knew Signora Mario would like to have it. Until she appears on the scene in 1854 it is, in fact, an informal history of Mazzini. She states in her own way the gospel of the great agitator; she tells the story of his apostolate—of the seemingly futile expeditions, of the years of exile, sometimes dark to the verge of suicide, and always filled with indefatigable conspiring. This story she has told before in Italian, but she adds here many touches which will appeal to American and English readers. Of Mazzini's life in London, for instance, of his friendships with the Carlyles and other English men and women, she writes intimately. If any one still doubts the personal charm—yes, the lovableness also—of Mazzini, he need only read these glowing pages.

II.

Jessie White, born at Gosport, May 9, 1832, was the daughter of a prosperous English yacht-builder. From her youth up, she was a "heretic," whether in her attitude towards the effete Anglicanism of the time, or in her social and political ideals. At twenty-one, she was supporting herself by teaching and writing—a remarkable achievement for a young Englishwoman in that period. At twenty-two, she lived in Paris; and the next year she visited Italy as companion to a lady who became engaged to Garibaldi. On that journey, the young zealot met Garibaldi—indeed, she and Lady X. travelled for six weeks with him as their guide in Sardinia. Thenceforward, Jessie White dedicated herself heart and soul to the cause of Italy. In England, she went about giving lectures; she translated Orsini's "Memoirs"; she felt the spell of Mazzini and sought him out. She says:

> Being at liberty, with my father's hearty consent and blessing, to dedicate myself to the cause of Italy, fully conscious that it was a question of "all in all or not at all," . . . I decided to put myself under the guidance of its chief apostle, Mazzini. My first visit to his tiny room in Cedar Road, remains ever present to my heart and vision. Birds were flying about the apartment, a few lilies of the valley stood in a vase on the mantelpiece, books and paper were scattered everywhere, and there, writing on his knee on the smallest fragment of the thinnest imaginable paper, sat Mazzini. He rose at once: his hand-grasp and luminous eyes fascinated and encouraged you, yet filled you with momentary awe. But the simple greeting, the gladness shown in welcoming "one more volunteer to the noble band of English workers and lovers of Italy," put all fears to flight, and soon he was talking, and I was listening as a student to a master anxious to convince, but not in the least desirous of *imposing* his convictions (p. 260.)

Henceforth, she was in that happiest state of zeal, in which the young disciple yearns for an opportunity to be put to the test. That opportunity came in 1857, when Mazzini planned a stroke at Genoa. Miss White went there, ostensibly as correspondent to several English papers, but in reality to engage in preparing the final stage of the plot. The Mazzinian conspirators, into whose inner circle she was introduced, seemed to her unjaded enthusiasm demigods and heroes; nor did she ever lose the glamour of that first initiation into the ranks of men who were willing to give their lives for their belief. Disillusions, only too many! came later, but they could not shake her conviction that the enthusiasts of 1857 and their plans were perfect. Mazzini himself glided noiselessly into Genoa, where, to the despair of the police, he stayed many weeks and directed a three-headed movement, which embraced the conquest of Naples by Pisacane, the seizing of Leghorn and revolutionizing of Tuscany by Quadrio, and the capture of Genoa itself by Mazzini and his immediate staff of conspirators. Miss White, being a British subject, had the advantage of going

about without being dogged by detectives.

The plot failed in all of its three purposes; and, except for the sacrifice of Pisacane and his companions, it failed fatuously. His slaughter, like that of John Brown, impressed the imagination of millions, and had its share in hastening the crisis that soon followed. Neither then nor afterwards, however, did Jessie White admit that the project was ill-advised. To hear her describe those days, was like listening to a fairy story, in which each particular detail is vividly real, but the plot appears to the eye of reason unsubstantial. She would recall the gladness with which she and two or three Italian young women decked Mazzini's chamber and bed with garlands on the day of his arrival in Genoa; they were as blithe as if death were not the penalty that awaited his discovery. She would laugh ironically at the stupidity of the police. Once, when they came to the Pareto Palace to ferret him out, he himself opened the door, having hastily put on the cook's white cap; after they had gone inside, he slipped out. "It was the upper half of Mazzini's head that distinguished him," she used to say; "the cook's cap hid that." She laughed scornfully when she learned, long afterward, that Cavour sent to Paris for detectives who knew Mazzini by sight. That Mazzini came and went untouched during ten weeks proves the extent of his own coolness and the loyalty of his confederates.

Being arrested for complicity in the attempt to seize Genoa, Jessie White was imprisoned for several months, until Cavour finally set her free, because he thought it more prudent to let her go (although he had conclusive evidence against her) than to rouse a storm of protests from the English Friends of Italy, who would have branded her punishment as persecution. Unqualified zealot that she was, she hankered for this crown of martyrdom. Thenceforward, she hated Cavour with a thorough and frank hatred, which envenoms her criticism of him in this book and in her other writings. And here, we see how finely she embodies the emotion of her cause. Reduced to its essence, the Mazzinian plea ran thus: "We are bent on freeing and uniting Italy. We are disinterested and absolutely unselfish. Our hearts tell us that justice, righteousness, and human progress hang upon our success. Whoever opposes us, upholds injustice, wrong, and reaction." Mazzini decided that, for strategic purposes, he must control Genoa for a time: that was reason and excuse enough for attempting to seize it, and to justify Jessie White in denouncing Cavour for preventing them. What right had Cavour to thwart zealots whose purpose was absolutely patriotic? He also pretended to promote the Italian cause; but if he were sincere, he surely would not arrest these fellow-workers in the cause.

Forty years later, when I discussed this episode with Signora Mario, she had not budged an inch from her position. The idea that a constitutional government must employ constitutional methods, though these be slow or partial, never moved her. Naturally, therefore, she would not recognize that a prime minister, responsible for the peace of his country, cannot permit any group of citizens to seize and govern one of its cities for the benefit of their particular scheme of salvation. The right to levy private war she might not defend in words, as she did in practice: but she always took it for granted that conspiracy and rebellion had a holy aim.

Like Garibaldi, she denied that any regard for international diplomacy ought to influence the action of the Italians. She firmly believed, though she never explained how this could be done, that Italy could have been united without the coöperation of Napoleon III, and that consequently the cession of Savoy and Nice was treachery and a crime. So Garibaldi was continually calling for the appointment of a dictator—himself—to hasten the solution of the most intricate political problem of the age. So Mazzini, in spite of thirty years of unvarying proof to the contrary, kept insisting that the Italian Common People could not only rid themselves of their native despots, but also could confidently face a coalition of hostile Europe.

This is the sphere where Emotion rules—the sphere where poetry and religious consecrations and the dazzling examples of uncalculating and apparently fruitless self-sacrifice originate. In this sphere Jessie White dwelt. Having heard the voice of her heart, she would not listen to her head. You must understand this, in order to value rightly her books.

III.

Shortly after her release from prison she married Alberto Mario, a man of keen, though rigid, ideas, and of inflexible integrity. He was Mazzini's best penman in Italy. The young couple came to the United States in 1859 to arouse sympathy in the Italian cause, but their tour was cut short by news of the war with Austria. Signora Mario used to relate with great satisfaction how, during her lecture in Washington, when she found a prominent Southern Senator sitting in the front row, she launched into a denunciation of slaveholders. She seems on this trip to have met Garrison, for whom she felt great reverence; and when, in 1865, Garrison's second son became one of the founders of the *Nation*, she began a special correspondence for this journal which lasted forty years. Her letters to the *Nation*, to the London *News*, to the Newcastle *Chronicle*, and to other papers contain much material that the historian will prize.

The Marios reached home too late to take part in the campaign of 1859, but during the exciting patriotic crisis of that winter and the next spring, and during Garibaldi's Sicilian Expedition, they were deep in the council of the Party of Action. Signora Mario served as army nurse. At the battle of the Volturno she went fourteen times under fire to bring back the wounded, and she spent thirty-six consecutive hours in the field-hospital. Ten years later, when Garibaldi offered his services to Republican France, she accompanied him and cared for the wounded. Thenceforth, until her husband's death, she took part in the stormy politics that threatened more than once the peace of the monarchy. Mario himself refused to acknowledge the King; she was a Radical. The disenchantment that followed unification—the inevitable disenchantment that comes when the decades of prose succeed the years of poetry—she attributed to the failure to establish a republic. Emotional to the end, she put her faith in Mazzini's formulas. But her chief activity was in exposing abuses. She wrote with anguish of the frightful condition of the Sicilian sulphur-miners; she laid bare the horrors of organized infanticide in the charitable asylums of Naples; she described the misery of the indigent peasants; she scathed sleek bureaucrats and political grafters. Wherever there was a wrong, she attacked it fearlessly; wherever there was suffering, she strove to relieve it. Like every one who realizes how much of the enormous total of sin and cruelty might be prevented, she cried out against the law's delay, against the agents of government who seem leagued with the wicked, against technicalities and quibbles which protect the evil-doer, against the inertia of tradition, against customs which give the unscrupulous a vested right to exploit the weak. Here, as always, she listened to her heart.

When her great companions vanished, she dedicated herself to speaking them fair in death. She wrote a life of Mazzini, which, despite its obvious drawbacks, will remain for posterity to consult, because it shows him as one of his intimates saw him. Garibaldi, too, she portrayed, perhaps even more satisfactorily. She edited Mario's writings, and Cattaneo's; she eulogized Nicotera, for whom, of all the younger generation of conspirators, she had the highest admiration; finally, she surpassed herself in her biography of Bertani, whom history will come at last to recognize as the wisest of the advisers of the Party of Action in the critical years from 1857 to 1861. What greater tribute could one pay to Jessie Mario's character than to state that she, an alien, was the chosen confidante and biographer of so many of Italy's patri-

otic sons? As a young woman in Florence she won the friendship of Mrs. Browning. In her later years, no one was more devoted to her, no one appreciated more justly her services to Italy, than Carducci. What was the secret of her hold over these Italians? Was it her loyalty? her outspokenness? her vigor of mind and deed? her amazing courage? Was it the something different that she as an Englishwoman had from what any Italian woman could have? No one could be more independent than she; no one, probably, ever told Mazzini and Garibaldi more frankly than she did when she disagreed from them. Her awe of the Prophet did not blind her to his personal side. Her worship of the Hero did not prevent her from making fun of his amorousness and other foibles. No, her power of attraction was as potent with Anglo-Saxons as with Italians; it was the power that springs not from racial traits, but from primary human qualities. You could not spend an hour with her without being conquered by her single-mindedness, her devotion to friends and principles, her scorn for all things base, her absolute fearlessness. In a society that was sophisticated, artificial, and insincere, she remained herself, as refreshing as a sudden rush of mountain air through the fetid streets of a city.

IV.

During the last ten years of her life, she earned a bare subsistence as teacher in the Normal School at Florence. Pegasus in harness seems not more contradictory than Jessie White, the confidante of conspirators and the comrade in war of Garibaldi, impounded in a school-room. But she accepted the task bravely. Her noble self-rcliance refused help, though offered most delicately, from her friends, and she had a haughty disdain of accepting anything from the Government. Her scorn for the old Republicans who not only became reconciled to the monarchy, but served under it, got honors and made fortunes, was terrific. I have heard her speak contemptuously of Crispi's care not to come within range of bullets in Sicily; but when she referred to his defection from Republicanism, her words had vitriol in them. It was not envy of the prosperity of the renegades that aroused her; it was the abhorrent realization that spirits that had once obeyed the call of the highest could find in worldly honors, wealth, or comfort, anything to lure them into the mire.

She died in Florence on March 5, 1906, and friends, besides the official dignitaries whom in life she had shunned, paid tribute at her funeral. Some day, Italy may remember to honor her with a monument. But her memory is secure, because her life is inextricably interwoven with the friendship of Garibaldi and Mazzini, two of the imperishables, and with their nearest disciples. To make her acquaintance through her books is to feel the very pulse of the cause to which she consecrated herself. Through her veins throbbed the great Emotion which was the lifeblood of the Italian Risorgimento.

William Roscoe Thayer.

CONTEMPORARY LITERATURE OF SPAIN.

Madrid, November 25.

An event in the industrial world, the Exposition at Valencia, has had a certain connection with Spanish writers. In Valencia, a Congress of Poetry is about to assemble, and there, too, the old poet, Teodoro Llorente, is to be crowned. This patriarch is a *félibre*, who has written in both Castillian and Provençal. To him, also, do we owe the best translations of foreign poets yet made in Spain. The honors paid to Llorente have provoked no opposition, but the Congress of Poetry, as a whole, has aroused much debate. The nature of poetry is not of a sort to go well with public assemblies, nor is the title of poet to be won by skill in them. Not even the writing of few or many pages of verse constitutes an author a real poet. To be that, he must have succeeded by his art in interesting and moving and in producing a deep spiritual impression. Hence there has been no lack of satirical references to this Congress of Poetry. It would have been wiser to make it coextensive with all literature, in which, indeed, lyric poetry might have had the post of honor.

Controversy has also arisen over the philological works published by Father Julio Cejador. This industrious scholar has his passionate admirers, but detractors no less impassioned who attack him with the roughness characteristic of Spanish wars of the pen. Even in intellectual affairs, the Spaniard is bellicose. For myself, so far as my slight attainments in philology go, I think it would be unfair to ignore the value of the unflagging labor of Father Julio, who is still a young man. He has already seen through the press six volumes on the structure and growth of language, besides his two solid volumes on the "Language of Cervantes," and a highly esteemed Greek Grammar. Cejador is of the family of the indomitable workers of the Renaissance, insatiate, as they used to say, in burning up their eyelashes and wearing out their elbows. Nevertheless, as our well-known critic, Gómez de Baguero says, in the technical positions of Cejador one feels an instinctive want of confidence. He inclines to the view of Astarloa, another Spanish priest, according to whom Basque is the first language ever spoken on earth, and the key to the understanding of all the rest. Some savants hold that Basque is allied to the native tongues of Mexico. Not long ago, I heard the eminent Mexicanist, Paso y Troncoso, expound this view.

There is no manner of doubt that at the present moment the literature of science has got a great impetus among us, while that of pure imagination is suffering from uncertainty and fatigue. This crisis was slow in coming, but was inevitable in view of the movement which, since 1898, has been driving Spain to make up for lost time, and in view also of the utilitarian impulse which has impressed all minds in the presence of economic and social demands. These are felt in Spain with peculiar force, as are also the agitations growing out of the anarchist tendency, marked by all the vehemence of our race.

Translation of foreign works has helped on the study of sociology and anthropology in Spain. Lombroso had some brilliant disciples among us, Salillas, for example, who applied the doctrines of the Italian to the analysis of our ancient picaresque novels. History has always had diligent cultivators in Spain, and continues to enrich itself. Among recent publications I will mention Altamira's "History of Spain and Spanish Civilization," the "History of the Cathedral of Santiago," by López Ferreiro, the "Discurso Histórico" of the Marquis of Cessalbo, and the erudite works of Menéndez Pidal. The most recent of the latter is on the jester of Charles V. In the history of art, too, there are many active and serious workers. Besides the infinite number of monographs in the *Boletín de la Sociedad de Excursionistas*, important publications are the "History of Christian Architecture in the Middle Ages," by Lampérez, the "School of Madrid," by the younger Beruete, and "Velasquez," by Beruete the elder, besides "Painting in Madrid," by Sentenach. Under the head of the history of literature are to be cited the "Origins of the Novel," by Menéndez y Pelayo, Padre Mir's study, "Autobiographies and Memoirs," and the "Legend of Don Juan," by Said Arnesto. The Ateneo has given a prize to "The Spanish Novel," by González Blanco. Nor should one forget, in philosophy, Bonilla's "The Myth of Psiquis" and the learned work of Father Arintero on the "Evolution of Mysticism."

The novel, alternating between the old naturalism and the neo-romantic spiritualism, has been losing vogue. Our most famous novelist, Pérez Galdós, after having sought a greater glory in writing for the stage, has left off publishing and has gone ardently into politics. His name is one of the four or five which are mentioned in the hypothetical case that a Spanish republic should ever want a President. On the other hand, Blasco Ibáñez appears to have given up his rôle as political agi-

tator, and is travelling in search of new subjects and impressions for his books. The Jesuit Father Coloma, abandoning the ground whose conquest won him fame with his novel, "Pequeñeces," which pictured aristocratic society, is devoting himself to-day to historical novels. One of them, entitled "Jeromin," has to do with the life of Don Juan of Austria, and is agreeable reading. The protagonist of the novel on which Coloma is now working will be Cardinal Cisneros, confessor of Isabel the Catholic, and Regent of Spain. The novelist who most closely reflects the present day is Pio Baroja. One of his latest books introduces the crime of bomb-throwing on the day of King Alfonso's marriage. Baroja's style is the absence of style. At the opposite pole is Valle Inclán, the painter of rural life in Galicia, a region which I too have described. He is an exquisite stylist. I ought to name another novelist, Felipe Trigo, very popular with young readers. Yet I must add that Spanish youth does not to-day demand innocent stories, and Trigo's are somewhat erotic.

In lyric poetry a noteworthy movement should be recorded. The great Spanish poets are either dead or aged. In their place the public is bestowing its favor upon poets who came to us from South America, either as diplomats or travellers. At their head stands Rubén Darío. But there is an entire pleiad—Amado Nervo, Santos Chocano, Balbino Dávilos. They have brought the note of modernism into Castillian poetry. We are not without young Spanish poets, but many of them adhere to the school of "the divine Ruben," as they call him. In the Madrid Ateneo there are continually readings by Mexican, Colombian, and Argentine poets. Also are they heard in the salons, where they reap a great harvest of—applause.

From dramatic literature, Echagaray, honored with the Nobel prize, has now definitely retired. He had filled our stage, like another Lope de Vega, for more than a quarter of a century; yet to-day his plays are not presented. To explain this anomaly—an author apotheosized but not produced—it would be necessary to write a critical article. At present, the leadership is held by Jacinto Benavente. A talented and fertile writer, he seldom attacks social problems. When one has mentioned the Quinteros, humorous and inexhaustible dramatists, and a couple of names more, one has really covered our actual dramatic production. Yet last year there were presented in Spain more than a thousand theatrical pieces—flowers of a single day. The public—always the same—demands novelty. That being so, it cannot expect to have masterpieces.

Countess Pardo Bazan.

Correspondence.

THE LAW'S DELAY.

To the Editor of The Nation:

Sir: The instance referred to in your article on "The Reform of Judicial Procedure" (the *Nation*, September 2), where an Indiana judge deferred ruling on a demurrer for two years or more, though the statute required disposition within six months, could hardly have occurred in the Philippines. Under Act 1552, passed by the Philippine Commission October 27, 1906:

> Justices of the peace and judges of the Courts of First Instance, of the Court of Land Registration, and of municipal courts shall certify on their application for leave . . . and upon salary vouchers presented by them for payment, and upon all pay rolls upon which their salaries are paid, that all special proceedings, applications, petitions, demurrers, motions, and all civil and criminal cases which have been under submission for decision or determination for a period of ninety days or more have been determined and decided on or before the date of making the certificate, and no leave shall be granted and *no salary be paid without such certificate.*

The difference between this and the Indiana statute will probably be found in the penalty attached to the former. So far as appears from your article the Indiana statute was merely a directory provision and imposed no penalty for its non-observance or, at least, none which so vitally affected the official in question. The effect of the Philippine statute in forcing an expedition of judicial business may be seen by observing the difference in this regard between the courts affected by the act and one to which it is inapplicable, and in which it is still not uncommon for cases to remain undecided for considerably more than ninety days after submission.

The statute in question is one of the many improvements which Americans in the Philippines have made over corresponding conditions at home, and when such improvements are known and adopted there even our anti-Imperialist friends will concede that good has resulted from our Philippine policy. Charles S. Lobingier.

Audiencia, Manila, October 19.

To the Editor of The Nation:

Sir: Repeated efforts have been made to inform the public of the grave results of "the law's delay." A number of articles have appeared in current periodicals, and in his recent speech in Chicago President Taft spoke in no uncertain terms on the subject. I wish to speak of an ill effect of "the law's delay" to which attention has not been called, one which is not less serious than any hitherto discussed and, probably, more widespread. I refer to the disastrous effect upon the health of the litigant.

It has been stated that one-half of human ailments are of mental origin. The most harmful influences of this order are the depressing and painful emotions, of which I need now only mention fear, worry, anxiety, and mental strain. It is through such influences that litigation so frequently impairs or destroys the health of the litigant. The importance of the matter at issue, anxiety as to the outcome, dread of the court, perhaps a sense of injustice—any or all of these may be a strain upon the nervous system sufficient to destroy its health.

Such conditions are incident to all litigation, and so any lawsuit may be fraught with danger to health. But the delayed litigation with its trials and retrials, its hopes and fears and bitter disappointments, and the protracted strain upon the nervous system, is especially calamitous. These consequences are particularly disastrous in damage cases, many of which turn on injuries with, apparently, passing symptoms, due to shock of the nervous system. Now, anxiety over the outcome, dread of the court, and the like, produce their most depressing effects in just these nervous cases, because they are acting upon already weakened nerves. When nervous symptons are present, symptoms due chiefly to shock, the most important part of the medical treatment consists in rightly influencing and directing the patient's mind. The effort should be by means of entertainment, occupation, diversion, and the like, to get his thoughts away from his troubles and symptoms, and to make him cheerful and hopeful. But litigation has just the opposite tendency. The examinations of physicians, consultations with lawyers, solicitous inquiries, and advice of friends tend to fix the patient's mind more and more upon himself, and thereby to exaggerate his symptoms and increase his suffering. There comes into play, also, that subtle influence, suggestion, which is likely to give rise to new symptoms, and intensify those already present.

If a better and a quicker way for the settlement of damage cases than the ordinary court procedures were devised it would be a blessing to many. Meanwhile these cases should help to fasten the attention of the public on "the law's delay."

THE FERRER AFFAIR.

To the Editor of The Nation:

Sir: Is it in the *Nation* or in the *Civiltà Cattolica* that I have just read with amazement an article entitled "The Ferrer Affair" (*Nation*, November 11)? The article in question is dated Paris, October 18, just the day before the *Figaro* published the *dossier* of the Ferrer trial, communicated by the Spanish embassy. Now as everybody who has eyes can see, that *dossier* contained no proof whatever of Ferrer's action in the riots at Barcelona, but only wretched hypotheses founded on his previous life and his acquaintances. Moreover, the address of Ferrer's lawyer has *not* been published, so that the little even which is stated in the act of impeachment and the *réquisitoire* may rest on falsehood. I have seen several of the leading Spanish Liberals, who are by no means anarchists; they have told me that Ferrer's sole crime was the Escuela Moderna, that he was absolutely incapable of any violence, incapable of leading or stimulating a riotous mob. Quite recently my colleague in the French Institute, Louis Havet, published a letter written by Ferrer to Cyvoct (himself unjustly condemned, some years ago, as an anarchist), in which violence of any kind is positively and emphatically deprecated. Your correspondent's article is nothing but the rehearsal of the perfidious sayings which filled the organs of the Vatican—especially the *Osservatore Romano*—about the 13th of October last. Now, there are

two proofs that Ferrer was no criminal in the ordinary sense of the word. The first is that if his hand had been detected in the burning of convents and ill-treatment of nuns, the Maura ministry would have made it known *urbi et orbi*. The second proof is the positive statement from Rome, by the *Stampa*, as well as by the *Berliner Tageblatt*, after Ferrer's execution, that the Pope had wished to interfere to save his life—a thing that would be quite unthinkable if Ferrer was believed to have actually committed or instigated bloodshed. These reports have not been denied by the Vatican.

Your correspondent wishes Americans to believe that many innocent nuns were killed in the streets; he, indeed, speaks of 138 dead, and adds: "The nuns were the chief victims." All the Spaniards I have seen deny any statement of that kind. The burning of convents was *not* accompanied by violence against individuals, unless with some exceptions due to the inevitable hooligan; but all Spaniards know that the convents in Barcelona, as in Bilbao and elsewhere, simply reduce workmen and workwomen to starvation, because the nuns work virtually for nothing, and use their influence to monopolize the best customers. That such a state of things should, in due time, have excited public wrath, is only too easy to understand.

Your correspondent goes on to speak of some international conspiration, of a *chef d'orchestre*, and the like. We know that stuff ever since 1898; it is the equivalent of the once famous, though always non-existing, "Dreyfus syndicate." The *Osservatore Romano* was, I think, the first to start the theory of a "Ferrer syndicate," and that stupid invention has found a hearing among the so-called better class of the unemployed. But I may regret to have found an echo of it in your columns; nay, more, if you will allow me some frankness, to have read in the *Nation*, a few days only after our great H. Ch. Lea's death, the Jesuitical apology of an inquisitorial trial and crime.

SOLOMON REINACH.

Paris, November 23.

[Despite the violence of M. Reinach's assertions, we think the letter of our correspondent presented an aspect of the Ferrer case which, amid the general clamor of passion, deserved consideration in this country.—ED. NATION.]

THE DISCIPLINE OF NATURALISM.

TO THE EDITOR OF THE NATION:

SIR: Among the critical voices raised against the dominance of romanticism I miss one to assign its due weight to a reaction that has already taken place. To separate the essentials from the accidents of naturalism is, perhaps, difficult. Once effected, however, the separation enables us to see that modern literature has already undergone a discipline whose aims have been the very sobriety, structural coherence, and essential sanity of method, if not always of result, that romanticism lacks.

A return to pure classicism is unthinkable. An ideal so faintly related to the rough welter of the world can scarcely be endured; nor are the taste for the specific, the impatience of the merely typical, likely to pass out. We shall demand, increasingly, I think, the illusion of reality, though of a nobler aspect of reality than the early naturalists cared to give. Fidelity of observation, however, simplicity and stringency of technique, impersonal workmanship—these naturalistic virtues, when practised in the service of a larger philosophy, are more likely to lead to a new humanism than any theoretical appeal to the practice of the Augustan ages.

To observe, for a moment, the extraordinarily sensitive temperament of Gerhart Hauptmann is to see the development of modern literature in epitome. He begins with an amorphous romanticism ("Promethidenlos"), turns ruthless naturalist ("Vor Sonnenaufgang," "Das Friedensfest"), and acquires the classically severe technique of the best naturalism. Next he succumbs to the allurements of symbolism, and writes "Die versunkene Glocke" and "Hannele." But always, at intervals, he barks back to the fundamental austerities of naturalistic art ("Fuhrmann Henschel," "Rose Berndt"). At last he applies the virtues learned in that harsh school to a legendary historical subject nobly envisaged and produces in such a play as "Der arme Heinrich," a poetic drama that is the forerunner, at least, of a new kind. He achieves there the restraint, the impersonality, the sanity of classic art. He achieves an idealism, too; but an idealism wrung from reality, not spun from a pattern of conventional nobleness. It is at this point that classicism and humanism, trained by the naturalists, diverge. Racine, upon a visionary preconception, presents a pantomime, plastically beautiful. That is noble. But Hauptmann spares us nothing of that dread mediæval agony, yet shows us there a high beauty and an austere joy. That is more noble. The technique of the two (allowing for difference of time and place and circumstance) is identical: impersonal, coherent, guided by an exquisite economy—in a word, unromantic.

LUDWIG LEWISOHN.

New York, December 3.

A SEA-CHANGE IN SPELLING.

TO THE EDITOR OF THE NATION:

SIR: One natural result of the agitation in favor of so-called "simplified spelling" would be a tendency on the part of the careless, inaccurate, and anarchical to be more lawless, inaccurate, and indifferent still as to spelling in general. Such a tendency would be shown in many places, one of them obviously being the classroom. I submit to teachers of English whether the spelling of students has not deteriorated since Mr. Roosevelt and others began openly to inculcate the belief that tradition and good taste in this matter are of less importance than an imaginary practical convenience. When, however, the professors in our technical schools are willing to print such caricatures of English as the following, it is time for all persons of good sense to bethink themselves. These sentences are chosen at random from an address delivered before a gathering of apprentices in Pittsburgh:

Liv for the realization of hy ideals.

He shoud hav abstaind from reviling the farisees.

A man brings out . . . quaint litl pearls in her soul that she herself never dremt of.

So are man's curage and generosity dubld and tripld thru a woman's presence.

Liv constantly in the atmosfere of beauty.

The laws of good taste in regard to orthography have perhaps never been better enunciated than by the first great English lexicographer. I venture to quote a passage of some length from Dr. Johnson's "Preface to the Dictionary" (Osgood, "Selections from Johnson," pp. 33, 34):

In this part of the work [orthography], where caprice has long wantoned without control, and vanity sought praise by petty reformation, I have endeavored to proceed with a scholar's reverence for antiquity, and a grammarian's regard to the genius of our tongue. I have attempted few alterations, and among those few, perhaps the greater part is from the modern to the ancient practice; and I hope I may be allowed to recommend to those, whose thoughts have been perhaps employed too anxiously on verbal singularities, not to disturb, upon narrow views, or for minute propriety, the orthography of their fathers. It has been asserted, that for the law to be *known*, is of more importance than to be *right*: "Change," says Hooker, "is not made without inconvenience, even from worse to better." There is in constancy and stability a general and lasting advantage, which will always overbalance the slow improvements of gradual correction.

LANE COOPER.

Ithica, N. Y., December 5.

THE BODLEIAN.

TO THE EDITOR OF THE NATION:

SIR: The Bodleian regulations as set forth in their Staff-Kalendar and discussed by your correspondent, "Lector," of November 25, are indeed a marvel of minutiæ. Their detail, however, is not due solely to the present librarian or his immediate predecessors, as "Lector" seems to intimate. If he will consult "The First Draft of the Statutes of the Public Library at Oxon," as drawn up by Sir Thomas Bodley himself, he will find there a quantity of details which time and expediency have legitimately expanded into the present rules. True, the regulations laid down in the Staff-Kalendar do not entirely cover the same needs as Sir Thomas's Statutes, but the principle of foresight and minuteness of detailed decision are the same. Sir Thomas gives an oath for the electors of the librarian, and as well one which the librarian or "keeper" must swear himself to keep "by God's infinite mercy." He specifies the hours of opening, the assigning "to every faculty their catalogues and tables," even requiring an alphabetical arrangement of the authors in the "Tables." The appointed visitors, or inspectors of the library, are assigned perquisites of a "refection" and gloves of a given cost, etc., etc.

May I trespass further on your space to quote the following passage which well illustrates Sir Thomas's insistence on detail, and in its subject matter is somewhat apposite to militant discussions now taking place without as well as within libraries:

It is deemed expedient, that some one be deputed to the custody of it [the Bodleian Library], that is noted and known for a diligent Student, and in all his Conversation to be Trusty, Active, and Discreet; a Graduat also, and a Linguist, *not encumbred with Marriage*, nor with a Benefice of Cure. For it cannot stand with Piety, that such a charge should admit the continual Society of other publick Imployments; and Marriage is too full of Domestical Impeachments, to afford him so much time from his private

Affairs, as almost every Day's necessity of his private Presence will require.

The italics are mine; the passage may be found on page 66 of "Bodley's Life and Statutes," edited in 1906 by Miss Ruth S. Grannis, and published in the series, Literature of Libraries, edited by J. C. Dana and H. W. Kent.

EDWARD HARMON VIRGIN.

General Theological Seminary Library, New York, November 29.

KARL HAUPTMANN.

TO THE EDITOR OF THE NATION:

SIR: Permit me to correct the impression conveyed by a statement in the last number of the *Nation* to the effect that "Karl Hauptmann has in the meantime made his appearance as a dramatist." Karl Hauptmann has been known to students of German as an able and virile dramatist for nearly fifteen years. In many respects he is rather a better dramatist than his weak and sentimental brother, Gerhart. His characters are always drawn with a firm hand and developed with a sure psychological insight. His plots are almost always carefully constructed and convincingly evolved. Of course, like Sudermann and almost all the other playwrights of modern Germany, he shows the unmistakable influence of Ibsen and Tolstoy. His best-known dramas are "Marianne," "Waldleute" and "Ephraims Breite." The last named has been the most successful and popular upon the German stage. It shows rather a striking resemblance to Tolstoy's "Power of Darkness," and, like its probable prototype, is a graphic and somewhat sensational study in moral depravity.

EDWARD STOCKTON MEYER.

GREEN EYES.

TO THE EDITOR OF THE NATION:

SIR: In connection with the subject of green eyes, which has been brought up several times recently in the *Nation*, I should like to call attention to a passage in my play of "Pyramus and Thisby," performed before Duke Theseus on his wedding day at night:

His eyes were green as leeks.

See "A Midsummer-Night's Dream," V, i, 342. PETER QUINCE.

Athens, November 22.

Literature.

NOTES ON HOLIDAY BOOKS.

I.

"A church is a piece of history," Stevenson writes, and, somewhere else, adds that cathedrals are his "favorite kind of mountain scenery." Both sayings are recalled by Mrs. Joseph Pennell in her book of the "French Cathedrals," with its sub-title "Monasteries and Abbeys and Sacred Sites of France" (The Century Co.). For fifteen years Mr. and Mrs. Pennell have contributed occasional illustrated articles to one of the magazines on the cathedrals and cathedral-towns of a land that they have come to know and to love better and better in studying it. The route of their architectural pilgrimage was first outlined by Mrs. Van Rensselaer, author of the study of English cathedrals; and it took them, "as long ago as the late eighties," to the cities of Provence. Since then, they have described and drawn in black and white churches in almost every French province, if one except Brittany, Touraine, and French Flanders. Since it was begun, provincial France has become much more travelled; thanks, in part, to the charm of the one's drawings, of the other's very gracious and efficiently documented narratives of travel. The writer only half congratulates herself on the achievement. Now that more folk enjoy France there is, correspondingly, less to enjoy. The motorist, she writes, has destroyed forever the romance of travel. He is, alas! more exacting than his humble pathfinder, the cyclist. "Already, before the motor was heard of, money had reduced the large towns of the Continent . . . to one level of dull uniformity; soon money, with the motor, will have worked the same disaster in all the smaller towns and all the little inns." The Ritz and the Plaza are your motorist's ideal—if he has ideals worth mentioning at all; and inns, as well as cathedrals, contribute to the charm of Continental journeyings. But a plutocracy cannot spoil these same cathedrals. Their only grave danger is too zealous restoration; against which Mrs. Pennell protests with all the fervor of whole-souled conviction. And yet the total impression one carries away from the reading of her handsomely got-up book is not of protest against abuses, but of enthusiasm for beautiful and venerable places and monuments. The style is just that which readers of the *Nation* admire in Mrs. Pennell's writings, whatever their subject; the illustrations include many examples of the excellent work which we look for in drawings signed Joseph Pennell. And most of these drawings have been acquired by the French government for the Luxembourg Museum.

Among the two or three handsomest travel books of the season must be placed Henry James's "Italian Hours," illustrated by Joseph Pennell (Houghton Mifflin Co.). The chapters on the various cities were for the most part written at earlier dates (those on Venice, for instance, go back to 1872, 1882, 1892, and 1899), but they are now first brought together so as to give a picture of Italy as a whole. The character of the pages need not here be criticised. They have Mr. James's customary "note of the haunted or over-charged consciousness," to use one of his own phrases; but they are free from the involved ambiguity of hesitation that makes of his later writings, such as his recent impressions of America, a task rather than a pleasure. As always, one of the attractions of this impressionistic manner is its arbitrariness. Thus as we read Mr. James's emotional reaction in Ravenna, looking "down the deadly provincial vista of the empty, sunny street," we recall the very different tone of, say, Oscar Wilde:

> But thou, Ravenna, better loved than all,
> Thy ruined palaces are but a pall
> That hides thy fallen greatness. . . .

For the same city Mr. Pennell gives one of his simplest, but to us most charming, pictures—a quick sketch of the famous Pineta. The drawings are in crayon, and for the most part on a dark reddish-brown background, which gives a little too strongly the effect of New York's brownstone epoch. They are true illustrations, however, of the romantic text.

It is interesting to turn from a book like Mr. James's "Italian Hours," and, by way of contrast, from the saccharine inanities of most of the other contemporary travellers, to the "Legends of the Alhambra," conceived by Washington Irving in his fine spirit of dignified enthusiasm. The book is issued through J. B. Lippincott Co., with an introduction by H. W. Mabie and pictures by George Hood. In his color-work Mr. Hood is reminiscent of Maxfield Parrish; we shall not, however, suggest invidious comparisons, partly because the Messrs. Lippincott have not here altogether avoided a certain crudity in reproduction. Yet the illustrations are, in effect, striking and even admirable. And black-and-white decorations—palaces, cloisters, and gardens, for the most part—most happily enrich each printed page.

Ernest Peixotto's felicity with the sketching and writing pen is so generally esteemed that we need only mention the newest example of his blend entitled, "Through the French Provinces" (Scribner). Motor-boat cruises on the Seine and Oise, seldom visited châteaux near Fontainebleau, motoring trips to Sens and Nemours, Chartres, and on to the Loire, a halt at Limoges, with an appreciation of its marvellous enamels, various wanderings in Provence and Gascony, devoted chiefly to unhackneyed cities—this in brief is the basis of a very charming book. Mr. Peixotto's pen-drawings are vibrant as always, carry a discreet elimination very far, and gain thereby in picturesqueness and essential truthfulness to effect.

The traditional false modesty of the book illustrator is thrown over in the volume on "China," described on the title page as by Mortimer Menpes, "with text by Sir Henry Arthur Blake." Books have been put out before this in which the letter-press is openly intended only to carry the pictures, yet always described as by Somebody, with illustrations by Somebody Else. In the present volume the text would probably reach the respectable length of forty or fifty thousand words. The illustrations are sixteen plates in color and four times as many marginal pen studies in black and white. Mr. Menpes's Chinese water views, in their predominant blues and cerises, are startlingly suggestive of Venetian effects. Where the human figure appears the Oriental atmosphere is brought close to us. The pictures are only loosely connected with the text. The volume is in square demy and comes from the Macmillan Company.

"Holland" is a fat and outwardly gorgeous volume, written and illustrated by George Wharton Edwards and published by Moffat, Yard & Co. The text consists of a substratum of Baedeker with a fairly plentiful covering of sympathetic personal observation. The illustrations, fifty-six in number, and of these several in color, are something of a vindication for the physical attractiveness of the Dutch people. Apparently it is not all a nation of very clumsy bipeds struggling against a handicap of breeches and kirtles. Mr. Edwards's fishermen and milkmaids seem quite capable of rapid locomotion and of otherwise looking after themselves. We gather that Dutch thrift has not been exaggerated—as the American traveller is bound to discover.

There is an amusing anecdote about Whistler.

Arthur Guthrie, the writer of "Letters from Franco and Italy" (A. C. McClurg & Co), is emphatically a good traveller, being sparing of comment on the standard sights and whimsically sensitive to the casual encounters of the road. The letters abound in a ripe Scotch "pawkiness" not unmixed with sentiment. The book is prettily printed and provided with line drawings by George Houston, which befit the letter press much better than the customary halftones. The manner is old-fashioned, and, perhaps, the more agreeable for that. The acerbities of the painter Gauguin seem unpardonable to the gentle traveller. Towards the newer music he is more tolerant. We borrow a characteristic observation, which is not without symbolic import. Mr. Guthrie saw in a confectioner's shop at Paris the following dual notice:

Our English visitors are cordially invited to enter and taste our wholesome swectmeats.

On another card:

Our American friends are asked to walk right in and sample our elegant candy.

For a friend afflicted with *Wanderlust* this unpretentious little book would make an appropriate offering.

Francis Miltoun's travel book this year is concerned with the "Castles and Châteaux of Old Burgundy," and contains the usual number of excellent illustrations from paintings and sketches made by Blanche McManus. As always in this series there is a judicious mixture of history, anecdote, art, and personal impressions. The volume will serve well as a guide book or as a fireside *peau de chagrin* to carry the imagination into the land of romance. (L. C. Page & Co.)

Brentano is the American publisher of a folio volume called "London," being a series of beautiful photographs of London scenes, chiefly, perhaps, of architectural monuments, by Alvin Langdon Coburn, with an introduction by Hillaire Belloc. The white paper on which M. Belloc's essay is printed is of the finest, and the art-mat (if that is the proper term) upon which the "impressionistic" photographs are mounted is of the most unexceptionable.

II.

Arthur Rackham has established himself as the illustrator *par excellence* of fairy tales and fanciful books, and his work this year, for an adaptation by W. L. Courtney of Fouqué's "Undine," is marked with his usual charm of vivid imagination, with less of the pure grotesque than he sometimes permits himself. The pictures, in firm line drawing with reinforcement of almost flat colors, lend themselves much better to printing than the usual messy color plates. The book is altogether one of the most attractive of the season. (Doubleday, Page & Co.)

Sixteen years ago Aubrey Beardsley finished his most ambitious work, the illustration of Malory's "Morte d'Arthur." Since then the precocious artist's fame has become international, and his original editions have been eagerly sought by collectors. One can hardly doubt, then, that the Duttons' one volume reissue of this famous Malory will find a welcome. Opinions will differ widely as to the value of this work as sheer illustration. The present reviewer finds Beardsley's decadence in rather flagrant dissonance with the riper mysticism of the knightly author. As to the decorative value of the drawings there is no question. In spite of an occasional perfunctoriness—the work was long and the illustrator mortally stricken—among the decorated books of our time this is one of the most original and fascinating.

A sumptuous volume is the Rubáiyát, illustrated, decorated, and printed (the artist, we are told, has drawn with his own hand every word of the text) for Thomas Y. Crowell & Co. by Willy Pogany. The volume is intentionally, orientally over-elaborate with color and design after the Persian manner, and with typography as near to the scroll-like Arabic as English lettering may be brought, so near, in fact, that in one or two places it is hard to make out the word. The temptation to read from right to left is always present. The volume is in quarto, with one verse to the page, and twenty-four charming pictures in color, steeped in their proper atmosphere. A very handsome book, indeed.

Paul Elder & Company's edition of Omar has the final FitzGerald text with a literal version of the quatrains upon which FitzGerald's work was based, by Arthur Guiterman. The page is wide-margined and rough-edged, with type of a fine black-letter effect. Gilbert James has eight pictures in black and white.

Gilbert James has done the illustrations for still another Omar, this one from the Macmillan Co. Typography here plays a decidedly minor part, but the sixteen pictures in color are unusually pleasing, and the volume, a solid and square quarto, has a charming front cover in gold, blue, and green scrollwork.

By the lightness in weight of the deceptively large new edition of "Selected Tales of Mystery," by Edgar Allan Poe, issued by J. B. Lippincott Company, one knows at once that here is a book printed in England, with the clearness of type and amplitude of margin which we associate with the better sort of English bookmaking. The colored illustrations by Byam Shaw lend distinction to the volume, which is throughout handsome in makeup. Poe is not an author easy to illustrate; it is a pity the morbid imagination of Aubrey Beardsley was never directed that way. Mr. Shaw's work in the book before us is excellent; but it certainly does not attain equality with the text, and, to our thinking, it does not chime in with it pleasantly in the minor key. Another edition of Poe's tales is published at this season by G. P. Putnam's Sons. Here the price is decidedly less and the bookmaking quite inconspicuous; the volume of "Tales" is uniform with that of the "Poems" issued a year ago, with an introduction by Professor Richardson. The Putnam edition is illustrated in black and white by F. W. Coburn.

In order to make a book out of a poem, and a short poem at that, Houghton Mifflin Co. have printed James Russell Lowell's "The Courtin'" three times over in the little volume in which it now appears, charmingly illustrated by Arthur I. Keller. First, it is printed seven stanzas to the page, then two lines to the page (in the interests of illustration), and, finally, a facsimile of the original manuscript is given. The Yankee idyll has always deserved its popularity; and this new edition of it, with only the pictures to distract one's attention from its humor and pleasant sentiment, makes one of the prettiest Christmas books of this year's offering.

III.

From Funk & Wagnalls Co. we receive ten cloth-bound volumes, entitled "The Best of the World's Classics," the selection being that of Henry Cabot Lodge and Francis W. Halsey. From the introduction contributed by the former, we learn that the word "classics" is used, "not in the narrow and technical sense, but rather in that of Thoreau, who defined classics as 'the noblest recorded thoughts of mankind.'" We hasten to add that, to judge by the present selection, these thoughts are habitually expressed in prose alone. We do not, however, complain; for, in the publishers' words, here are "over 500 of the best prose writings by more than 200 of the world's best authors." These selections are arranged chronologically, by countries, beginning with Greece and ending with America (two volumes). Let us add—for there are those who insist on taking their belles-lettres and history in microscopic doses—that the paper used is opaque and that the printing is admirably clear.

"Days with the Poets" is the title given to a series of booklets published by Hodder & Stoughton, of which six volumes lie before us. The series gives some one unnamed the opportunity to write some rather commonplace pages of text, connecting poems and fragments of poems by the author who, in any particular volume, is under consideration. The pictures are no doubt the chief attraction here. With some success, color reproductions from paintings by Neatby illustrate "A Day with Keats," while Tennyson's book is decked out with similar illustrations after Haslehurst and Margetson. The same painters, assisted by Lewis Baumer and W. Russell Flint, "do" the Wordsworth and the Browning; Dudley Hardy illustrates the Burns, and several combine to beautify "A Day with Longfellow." In so far as these volumes enlarge the public of the poets treated, they are to be most heartily welcomed.

Thomas Y. Crowell & Co., in their thin-paper series, now put out a George Eliot in eight volumes, and Wordsworth's poems and James Russell Lowell's in a volume apiece. The binding is a plum-colored, really flexible leather, which bends as easily with the 480 pages of "Adam Bede" as with the 950 pages of the Wordsworth. In the same series is issued a volume of "Poetical Quotations"—a new edition of the American version of Bohn's "Dictionary of Poetical Quotations," edited by Anna L. Ward. Here are generously represented American and English authors, whose lines are classified according to their subjects: Actors, Adieu, Adversity (see Affliction); Homer, Honeymoon (see Moon), Hopo, etc. The thinner volumes in this collection show, of course, the better page. There is a limit beyond which a reduction in bulk can be gained only at the cost of an imperfectly opaque page. The type is sizable and clear. George Eliot, traditionally a two-shelf author, certainly bears the aspect of novelty where condensed to eight inches.

Frederick A. Stokes Company offers an excellent reprint of Reade's "Cloister and the Hearth," with illustrations in color and black-and-white by Byam Shaw. The artist

has caught well the romance of that great historical novel.

Thomas B. Mosher's holiday-books have become standard Christmas-gift literature. This year we have from the Portland bookshop a fine array of poets: Eugene Lee-Hamilton's exquisite sonnet sequence, "Mimma Bella," 20 pages in vellum; W. E. Henley's "Rhymes and Rhythms," 70 narrow and unadorned pages in bluish-gray cardboard; "Rabbi Ben Ezra," showing a short and wide page, with a large-faced type; an exquisite group of lyrics by A. C. Swinburne ("Félise"); a reprint of Mr. Yeats's "Land of Heart's Desire"; "A Branch of May Poems" and "A Wayside Lute," by Lizette Woodworth Reese. Among the smaller volumes is a fine reprint of Milton's "Ode on the Morning of Christ's Nativity"; and in prose, besides, Francis Thompson's Essay on Shelley, in seventy very handsome pages; Arthur Symons's translation of Baudelaire's "Poems in Prose," and his own "Silhouettes"; "A Little Book for John O'Mahoney's Friends," by Katharine Tynan; Olive Schreiner's "The Lost Joy," and Pater's "Child in the House."

For lovers of the real book, we may recommend two new additions to the green-and-gold Library of Prose and Poetry, issued by the Oxford University Press. One of these is an exact reprint of Keats's volume of 1820, containing "Lamia," "Isabella," "The Eve of St. Agnes," the odes, and "Hyperion"; the other reproduces Gray's volume of 1768, containing, with the few pages of the appendix, all the poems published in the poet's life-time. Here, if anywhere, we have combined the grace of a gift-book and the substantial value of literature.

In a pocketable volume, H. S. Krans has gathered a chain of "English Love Poems, Old and New," admitting, as he says, "only poems that are, beyond all dispute, lyrical—brief, spontaneous, song-like, impassioned or aglow with feeling." The selection is good, and indeed has no need to go beyond well-trodden lines. In only a few instances—*e. g.*, where he accepts Hood's "I love thee" and rejects "Fair Ines"—do we feel we have just cause for quarrelling with his taste. The format of the book is not unlike that of the Golden Treasury Series, with, however, an ornate cover. The illustrations were better omitted. (G. P. Putnam's Sons.)

A quite charming edition of Mrs. Browning's "Sonnets from the Portuguese" has been printed by G. P. Putnam's Sons, with decorative designs by Margaret Armstrong on alternate pages. In each of these illustrations is inscribed a brief and appropriate quotation from some other poet.

Duffield & Co. issue for the holidays a collection of texts which they appropriately call The Rubric Series, since the printing is in red and black. The marginal decorations are in excellent taste and do decorate—and not obliterate—the text itself. The Rubric Series is published at a reasonable price, and, so far, includes no books which it is difficult to secure in other editions; but we heartily commend as pleasant to the eye and light to the hand the volumes which we have received: Browning's "Pippa Passes," Emerson's "Nature," Mrs. Browning's "Sonnets from the Portuguese," and the Dickens "Christmas Carol."

W. E. H. LECKY.

A Memoir of W. E. H. Lecky. By his wife. New York: Longmans, Green & Co. $2.50 net.

Mr. Lecky, we read, never encouraged the idea of a biography, but we fancy his shade must be indulgent to a memoir that embodies so many of his own qualities of tact, proportion, and reserve. His career was uniformly brilliant; his relations included the best minds and wits in many nations. Nothing would have been easier than to stitch his letters together with perfunctory comment, and thus produce one more of those obesely formless biographies in two volumes. Mrs. Lecky has chosen instead to give only the significant material. Hundreds of letters are represented only by a single nugget of wit or wisdom, washed out of the imprisoning detritus. To such discretion, all gratitude is due.

The life of Mr. Lecky was an extraordinary example of economized forces. In him, the vital stock of sturdy landowning families had run low. How unBritish is the first picture we have of him as "a fair, quiet, gentle boy. He used to ride on a pony, write poetry, and sermons, and was much occupied with religious controversy." Of his school life at Cheltenham, he wrote twenty years later in terms that a Frenchman might use of the bondage of the Lycée: "I hated public-school life greatly, never playing any games, and being driven to the very verge of distraction at living always with other boys." There was, indeed, nothing of the wholesome young barbarian about Edward Lecky. Immediately after a town and gown riot on the green of Trinity College, Dublin, he writes: "My personal recollections are few, as I was so horrified at the faces streaming with blood and men half insensible that I was rather glad to turn away." And the further comment bespeaks the future judicious historian: "There seems but one opinion here, that the provocation in no respect justified the charge" (of the police force). Throughout his life city noises distressed him beyond endurance, and also the routine of society. Periodically and frequently he took refuge in travel:

> When I have got into a state of morbid, feverish excitability, I have usually gone, with some long and serious books which require minute and patient study, somewhere far from every one I know, and have there, in long solitary mountain walks, calmed my mind and systematized my thoughts.

The last phrase is significant. Systematizing his thoughts became the chief business of the man, and of it he made a very fine art. At Trinity College, Dublin, he became the paragon of an intellectual circle, including David Plunket, now a Peer; Mr. Fitzgibbon, and his life-long correspondent, Arthur Booth. Dowden, Traill, and Mahaffy were later college contemporaries and friends. Lecky was the best orator of the Historical Society and admittedly the most brilliant talker of his academic generation, but, moderate in all things, he was content to rank ten in a class of forty, to publish anonymously the inevitable thin volume of poems, and to prepare himself for a career in divinity. There followed several years of travel and research through the greater and lesser libraries of Europe, and gradually, it became clear that he was to have not the spiritual cure of a parish, but the intellectual cure of an epoch. Before the two great Histories of Rationalism and of Moral Ideas, he had given hostages in a small volume of "Irish Leaders." It fell still-born from the press in 1861, the author's twenty-third year, only to be revived into poignant actuality a score of years later during the Home Rule agitation. One would gladly know the stages that drew him away from the pulpit. Just what was his working balance between increasing rationalism and residual faith we shall never know, but it seems unlikely that this hidden struggle had the tragic cast so common among the great Victorians. Towards the end of his life, when questioned as to his religion by his constituents of Trinity College, he replied "I am a Christian," and resolutely refused all ulterior explanations.

It is pleasant to recall that the veteran George Ticknor was one of the first Americans to praise the "History of Rationalism," 1865. From this time dates the correspondence with H. C. Lea, the historian of the Inquisition. Still later James Ford Rhodes became something between a pupil and a counsellor. The two great treatises on Rationalism and European Morals established Lecky's fame. Achieved before his thirtieth year, involving prodigious research over a period of nearly two thousand years, the mere athleticism of the task would have contented a more ordinary man. But Lecky had worked out as well a fine and individual way of writing history, a manner which he once again exemplified in the more restricted and likewise more difficult task that virtually rounded off his life-work, the "History of England in the Eighteenth Century." What his attitude was we must now briefly inquire.

Everybody knows that he brought to actual composition a singular amenity, clarity, and sense of proportion—qualities rather French than English. More important was a crystalline impartiality not incompatible with sympathy. "He had," writes a Trinity friend, "an inveterate habit, which exposed him to a great deal of misunderstanding, of defending in conversation whatever position happened to be attacked." Note clearly that his impartiality was not

merely negative; there was in it no shred of indifference. Imaginative sympathy was, he held, the prime quality of the historian. He must be able to live along with every faction which he describes. Thus readers of the Morals alternately accused him of Popery, or more specifically, Jesuitism, and of atheism. Candor, literary tact, and sympathy form a large part of his equipment, but this perhaps would hardly set him apart from Green and lesser scholars. He brought an especial ardent faith in the validity of the generalizing process, and thereby he is the only English historian who has the full flavor of the Victorian mood as best represented in the poets. He believed that the motley chronicle of the past could not merely be organized and described, but also explained. The search for causes he knew to be desperately difficult, and this served not as a deterrent, but as a challenge. In a letter to a foreign correspondent he has given an account of his aims, which, if closely read, will go far to explain his peculiar excellences. Tracing his descent through Vico, Condorcet, Hegel, Herder, Comte, and Buckle, he adds:

> What characterizes these writers is that they try to look at history not as a series of biographies, or accidents, or pictures, but as a great organic whole; that they consider the social and intellectual condition of the world at any given period a problem to be explained, the net result of innumerable influences which it is the business of the historian to trace; and that they especially believe that intellectual belief has not been due merely to arguments or other intellectual causes, but has been very profoundly modified in many curious ways by social, political, and industrial influences.

That is, Mr. Lecky deliberately complicated the task of the historian in the direction of intimacy. One might almost have predicted that the young historian of Rationalism and European Morals must end as the author of the "Map of Life." This assertion of the will to interpret required prophetic courage, and we think it noteworthy that the finest and tersest eulogy of the Morals came from one Alfred Tennyson, who said: "It is a wonderful book for a young man to have written, a great book for any man to have written, and proves that he has genius, true genius."

There was a polished suavity in Mr. Lecky's manner as a writer that possibly told against his authority. He aroused the British prejudice against the clever person, and hardly got his due recognition as a laborious scholar. If any one still has such doubts, this biography will disabuse him. The digesting of two hundred volumes of manuscripts and one hundred of pamphlet collections for the Irish history is the partial record for one summer when he was "not exactly idle." It is his triumph to have concealed this labor by the grace of the finished product. His health, never robust, was seriously affected by his early tasks, and he held his own through a fairly long and most useful life by an elaborate system of evasion. London inevitably drew him, but he found a haven out of sound of the roar. Society claimed him, but had him rarely. He declined a Regius Professorship at Oxford in order to finish his "History of the Eighteenth Century." Nor would he contribute to Lord Acton's Cambridge History, except perfunctorily, disapproving as he did of the underlying coöperative idea. At thirty-three he married a lady-in-waiting of the Dowager Queen of Holland. It was then that he humorously envied the luck of Adam, who was "married in a deep sleep." The wedding reception was in the historic House in the Wood, in the Orange Hall, where later the Leckys were to see the body of their friend the Queen lying in state while her favorite swans swam untended outside. The gentler side of Lecky which is suggested in such a reference it would be interesting to exhibit fully, but a pair of examples must suffice. One recalls vividly his loyalty to Carlyle in mental dissolution. To Gavan Duffy Lecky writes quite simply:

> The last year or eighteen months of his [Carlyle's] life was very sad. . . . I used to drive with him regularly once a week, chiefly to light his pipe and lift to his lips a tonic which he had to take—as he could do neither himself, and he used to sink into long unbroken silences.

Is there any picture of the stricken Titan like that? In a different way one relishes equally the view of Herbert Spencer, who has just finished the "Sociology," and "seems very confident that it will be a complete explanation of human life." The work was running longer than the author's expectation, as "he had quite forgotten" the existence of one part, "domestic relations." However, adds Lecky, "these, too, will be explained."

It was inevitable that politics should claim Mr. Lecky as soon as the Irish question became urgent. He simply was the best informed contemporary on the history of that unhappy land, he had predicted the breakdown of the first land purchase bill, his friends included Irishmen of every tinge of opinion. By the winter of 1895, he was sitting in Parliament as member from Trinity College, Dublin. His seven years of this service were hardly happy ones. To Mr. Lea, he writes: "The work is physically very tiring, and I often feel that a good deal of it might be done equally well, with a little training, by a fairly intelligent poodle-dog." As a Liberal Unionist, he steered a consistent course. Towards the idea of Home Rule, he was steadily opposed. Parnell and his terrorists, he cordially detested. A separate Catholic university seemed to him needless. He advocated an extension of local self-government. It was unfortunate, perhaps, that his brief public career fell upon a time of declining health and spirits. He betrayed just a little of the old man's tendency to despair of the republic. To judge the recent Irish policy of England, which was virtually that of Mr. Lecky, would be hazardous. To us it seems deficient in humane audacity and imagination. Mr. Lecky insisted that, except to an orderly Ireland, nothing could be conceded, but it is rarely the part of political wisdom to treat ignorant and inflamed folk simply as they deserve. Here, many will think, was the chance for that instinctive and illogical idealism to which Mr. Lecky accorded so large a part in history. Through the genial caricatures of F. M. Gould, all the world knows Mr. Lecky, the Parliamentarian. The deprecating stoop, the craned neck, the general aspect of a benign human giraffe, have perhaps unduly robbed his presence of its real dignity. One likes better to remember him as he spoke at the tercentenary of his own college in 1892. "Clothed like the scarlet woman," as he once wrote whimsically to a correspondent, the tall self-contained figure concluded with words that needed no emphasis of gesture:

> Whatever fate may be in store for us, whatever new powers may arise, may this University at least be true to itself. In a country torn by sectarian and political strife, may it continue to bring together in friendly competition students of different creeds and different political colors, and teach them to respect each other and teach them to respect themselves. In an atmosphere hot and feverish with overstrained rhetoric and passionate exaggerations, may it continue the home of sober thought, of serious study, of impartial judgment, of an earnest desire for truth, building up slowly, steadily, and laboriously the nobler and more enduring elements of national life.

With this utterance, we may take leave of Mr. Lecky. It is in a manner his testament. It embodies the spirit of his great histories, of such tracts as "Democracy," or his ultimate and most intimate contribution to the literature of morals, "The Map of Life." In the later years his invalidism increased, and he died suddenly and painlessly in his own library on October 22, 1903, midway in his sixty-fifth year.

Mr. Lecky possessed a tact and industry that amounted to genius. He commanded a flexible and persuasive style. Constantly at grips with physical weakness, he conquered peace and opportunity for the effective employment of an indomitable mind. The element of tragedy and moral storm and stress which was so marked in his Victorian contemporaries is hardly perceived in him. He recalls rather the stalwart, intellectual optimism of the eighteenth century; but, an indefatigable investigator of the concrete and particular, he betrays nothing of the doctrinaire su-

perficiality of the *Aufklärung*. Like his friend, Herbert Spencer, but with far more varied and imaginative insight, he exemplifies a peculiarly loyal courage of the mind. The value of strenuous research and honest generalization, he seems never to have doubted. In our time, this quality is rare and fortifying. Mr. Lecky lived to hear Brunetière proclaim the bankruptcy of science; he died before William James and Bergson had intimated the futility of intellection itself.

CURRENT FICTION.

Seymour Charlton. By W. B. Maxwell. New York: D. Appleton & Co.

Seymour Charlton, the younger son of an earl, finds himself, at thirty-five, a lonely and useless member of society. For a time his noble father has regarded him of importance as the possible heir to the title. The elder brother was a renegade—a socialist, and, unfortunately, a cad: there was felt to be a chance of his disposing of himself. He had, indeed, disappeared for a time in Australia, only to emerge with a wife and progeny; whereupon Seymour became a cipher in his father's eyes, and nearly that in his own. He now seemed destined to be a "little brother to the rich" for the rest of his life. But at this moment a saving thing happens. He falls seriously in love with a poor girl, and determines to drop the empty nonsense of fashionable life and be simply busy and happy with her. Then the father and the elder brother are taken off, the Australian offspring are discovered to be illegitimate, and Seymour Charlton finds himself the Earl of Brentwood, with huge wealth and many responsibilities. He marries the girl, but there is no quiet life of the affections for them. He is swept into political life, as a nominal leader but a virtual pawn, and is quickly involved in a mesh of petty cares and worries presented to him in the guise of public service. A Cabinet position is dangled before him, and he becomes a very little man in scheming to be a great one. There is estrangement between him and his wife. The man has become a manikin, and eventually allows himself to be actually unfaithful to her. But there is a strain of reserve force in him, and the moment is to come when, by the exercise of a real magnanimity, he is able to free himself from the toils of pseudo-greatness, and begin at last a reasonable life with the woman he really loves.

Readers of "Vivien" and "The Guarded Flame" will be prepared to find this theme treated by Mr. Maxwell in no merely conventional way. In Copland, the young earl's father-in-law—Copland the ingenuous, the exuberant, the perennially young, and, alas! the incurably tricky—there is a strong though no doubt chance resemblance to the irrepressible compounder of "Tono-Bungay."

The Severed Mantle. By William Lindsey. Boston: Houghton Mifflin Co.

Mr. Lindsey will be recalled by a few as author of a volume of respectable minor verse, and by many as author of a book of robustious youth called "Cinder-Path Tales." He would now seem to have turned his hand to historical romance rather in a spirit of adventure than from inner compulsion. Even historical romance is not a trick to be turned offhand, and there are not a few traces of the tyro in the present performance. It is a creditable *tour de force*, but it is far from a masterpiece. Provence in the time of the troubadours offers a tempting theme for the romancer, but a theme which has its evident perils. The brusque modern mind finds something approaching the affected and silly in that cult of "l'amour" upon which, after all, modern civilization is founded. When Mr. Lindsey tries to show "the land of the nightingale and rose when Idealism reigned supreme, with Love, Joy, and Song her counsellors," he sets himself a difficult task. He has simplified the matter by approaching the troubadour from the Puritan point of view, representing him not as "a shallow fellow who wandered about twanging a lute, and singing pretty songs to foolish women," but as an earnest liver, a lofty dreamer—often a martyr even.

He of the severed mantle sets out early in life in quest of "the Perfect Love." He has the familiar heroic adventures—hair-breadth escapes, doughty encounters, sentimental conquests. He does wonders in the lists and in the public contests of the masters of song. He is tempted by light loves, and finally by the summons of a great passion. But the spiritual side of his nature remains dominant. He wins through it all unscathed. A time of Crusade comes, and, with the Cross on his breast and the consecrating kiss of his lady on his lips, he finds the Perfect Love. The narrative is elaborately furnished with the detail and color of Provençal life in the twelfth century, but, unfortunately, the general effect is rather of ingenuity than of strength.

Whatever the book has of intrinsic interest is due to Mr. Lindsey's happy bits of translation from the Provençal song of the period.

The Red Saint. By Warwick Deeping. New York: Cassell & Co., Ltd.

This writer has completely mastered the formula of the historical romance. He knows the right proportion of spectacle, intrigue, blood-letting, love-making, and authentic fact. He has had his previous successes ("Mad Barbara" and the rest), and the legend "Fifth Impression" to be found upon the present title-page indicates that "The Red Saint" is going the way of the popular novel. Taken in cold blood, the result is, of course, more or less preposterous; but historical romance, like melodrama, is hardly worth approaching at all unless in a child-like spirit. The "red saint" is a red-haired amateur hermitess who lives in a wood and works marvels of healing among the surrounding peasantry. She is bound by no vows, and love springs up between her and a neighboring noble. He is on the side of the barons in their struggle with Henry III; and during his absence in the field the red saint is violated in her cell by a Gascon follower of the King. The fact remains unknown, and the girl allows herself to be taken under the protection of the Abbot of Battle. She is welcomed with pomp as an accession to the abbey belongings; but her miraculous powers are gone, and she becomes a cause of humiliation to the monks. Finally her approaching motherhood is discovered, and she is driven forth with violence. She wanders helpless until she finds refuge under the wing of a camp-follower, a common woman of the road, but a good heart. The Gascon comes upon them, and it seems that she is to fall into his hands; but with the aid of the woman and of her undeclared lover of former days, she is rescued. Of course one sees them eventually united from the very outset; but the end is not yet.

Mr. Deeping, we say, knows the game. He makes fluent use of that quaint idiom which joins a modern syntax to an archaic vocabulary, with now and then a frank lapse into modern vernacular—as conventional a dialect as that with which the hero of melodrama edifies the gallery.

The Paladin. By Horace Annesley Vachell. New York: Dodd, Mead & Co.

This clever story is dedicated to the author's little daughter "and to other maids of high and low degree who, by a perusal of its pages, may learn, perhaps, that seeming paladins cannot be taken with impunity at their own valuation." Strictly, the book should have been called "The Seeming Paladin," for Harry Rye was a man who played the hero intermittently only, and made his acts of heroism deliberate and safe by "marking time" while he meditated them. On two or three occasions he did the right thing at the right moment. Usually, however, he achieved his chivalries too late. Thus did he fail to hold the woman for whom he achieved them: and his history becomes the record of that unpopular being, a careful man.

One cannot escape a feeling that the author, consumed as he is with just indignation, is yet hardly fair to his hero in his better moments. It is not surprising that weak human nature

should be a little complacent at doing the honorable thing when the honorable thing means defiance of family and tradition. The heroine and her friends may well have been annoyed, but from the author one looks for perfect justice. Esther—labelled "a woman of temperament"—is a happy compound of sensitiveness and sense, kicking against the pricks but always stable in loyalty and kindness. Her defection from Harry is quite as much due to her own enlarging vision as to his shortcomings. The tangle here is one of unusual originality. The author admirably understands how far to give detail and how far to omit it. The side characters are particularly individual and the march of the story is conducted in a masterly way. The impression survives that it is not only the Harry Ryes who are arraigned, but the whole sex, especially such of them as play untimely golf on honeymoons.

OUR TREATMENT OF THE CHINESE.

Chinese Immigration. By Mary Roberts Coolidge. New York: Henry Holt & Co. $1.75 net.

Just why Mrs. Coolidge's book should have been withdrawn from sale (a few days after publication) for several weeks is not altogether clear. The author is a well-known student and teacher of economics, not given heretofore to sensationalism, and of standing among scholars. Every material statement in the volume is vouched for as based either upon personal observation or upon authorities specifically cited; while a large part of the data is drawn from official publications bearing the imprint of the United States Government. The explanation offered by the publishers, that the book "contains so much criticism of officials concerned in our Chinese policy, that since the first objection, some weeks since, it has been kept out of the market awaiting others," is at least surprising, in view of the care with which publishers usually examine works dealing with living persons or matters of current discussion; and it is equally hard to believe that the publishers could be induced to yield to pressure from Washington, simply because a book issued by them reflected upon the character and work of government officials.

Yet if ever a book contained a damning arraignment of a governmental policy and its administration, Mrs. Coolidge's volume is such an one. We must pass over entirely the chapters devoted to discussion of the character and economic status of the Chinese, and the motives which have prompted their migration to the United States; merely remarking that, in thoroughness of observation and fulness of detail, they easily surpass all previous treatments of these topics and are in the highest degree informing. The leading feature of the book is its account of the development and administration of the exclusion laws. Here is set forth the whole long story of political chicanery, abuse, fraud, misrepresentation, coercion, illegality, and indecency in which the record of the treatment of the Chinese in this country is enshrined. In the evident willingness, and at times the purpose, to pass laws difficult of enforcement because intricate or obscure, and at the same time deliberately repugnant to treaty obligations and the common rights of individuals at law; to construe the law with the utmost strictness, and always against those claiming under it; to deny appeal to the courts, or so to impede it as to make appeal virtually impossible; to browbeat witnesses, attorneys, and friends, confine and deport immigrants without warrant or trial, and subject innocent persons to indignity and hardship without possibility of mitigation or redress; to mob, drive out, or kill inoffensive persons lawfully resident in the country and not even suspected of any crime; and to distort and falsify evidence in order that the acts of politicians might receive official support at Washington—the story of the Chinese in the United States recalls nothing so much as the Dreyfus case. Substitute for the Government and a corrupt officialdom in France a venal labor vote and corrupt immigration service in this country, and add in each case the bitter element of race hatred, and the historical parallel is singularly complete.

It would be some palliation if the responsibility for our national disgrace in the matter of the Chinese could be charged entirely to petty officials; but such, unfortunately, is not the case. It was Secretary Bayard who, after leaving unacknowledged for months the protests of the Chinese Minister against the Scott Act, declared that the act was passed in accordance with the wishes of China. It was Secretary Blaine who ignored repeated diplomatic protests against both the Scott Act and the Geary Act, the latter of which "not only violated every single article of the treaty of 1880, but also denied bail, required white witnesses, allowed arrest without warrant, and put the burden of proof on the Chinese" (p. 221). It was Acting-Secretary Wharton, an eminent authority on international law, who in December, 1892, replying at last to protests of four years' standing, evaded the questions at issue, laid the blame on the Chinese, and insultingly reproached Minister Tsui for not adopting "an attitude of amicable concurrence toward a rational and practical end." Even Secretary Hay, of all our great diplomatists the most enlightened and liberal in the treatment of the Chinese question, upheld the ruling of Attorney-General Griggs, in 1898, that the true meaning of the treaty of 1880 was "not that all Chinese persons may enter this country who are not forbidden, but that only those are entitled to enter who are expressly allowed"—a ruling which reversed the substantially uniform practice of sixteen years, and under which the Secretary of the Treasury "at once made a regulation denying admission to salesmen, clerks, buyers, bookkeepers, accountants, managers, storekeepers, apprentices, agents, cashiers, physicians, proprietors of restaurants, etc." (p. 283).

To any one familiar with the politics of California, the attitude of Congressmen and Senators from that State towards any question in which "labor" is concerned is rarely a matter of surprise; but the character of both the men and the methods employed to further the policy of exclusion gets startling illumination at Mrs. Coolidge's hands. The famous Congressional report of 1876, on Chinese immigration, is left without a leg to stand upon, so inaccurate and biassed are its statements shown to be. The reports of the United States consul at Hongkong from 1871 to 1879, D. H. Bailey, on the coolie trade and on slavery in China, were (in an article in the *North American Review*) cited as authoritative by Senator G. C. Perkins as recently as 1906; yet these reports were utterly misleading, and Bailey himself is declared to have been an embezzler, during his office, to an amount of at least ten times his annual salary; while T. H. King, one of the "star" witnesses before the investigating committee in 1876, aided him in his dishonesty. The two Commissioners-General of Immigration who held the office from 1889 to 1902, Hermann Stump and T. V. Powderly, were chosen solely in the interest of "labor," as was also Commissioner Sargent; while the Secretary of Commerce and Labor in President Roosevelt's Cabinet, Victor H. Metcalf, was a California politician heartily in sympathy with the trade unions in their advocacy of exclusion. The policy of brutality in the treatment of Chinese immigrants reached its climax in the career of the notorious James R. Dunn, sometime chief inspector at San Francisco, who, according to Mrs. Coolidge, "suggested rules, and secured their adoption, and then under their sanction refused landing"; and in case of appeal to Washington, "presented the testimony in any shape he chose, colored with his own interpretations" (p. 322). Dunn was eventually transferred to Canada, and thence to St. Louis, from which place "three cases of arbitrary and outrageous procedure" by him and his subordinates have been reported to the State Department since this book was written.

Painful and humiliating as is the story which Mrs. Coolidge has to tell, the book must nevertheless prove a powerful agent for good. Of all our social problems in this country, none presents greater difficulties than the problem of

the treatment of alien races; and coming, as this volume does, at a time when the feeling of the intelligent classes on the Pacific Coast towards the Chinese has changed from opposition to outspoken friendliness, and when a demand for administrative honesty and efficiency is loud and insistent in all parts of the country, it cannot but help on the work of adjustment, if in no other way than by showing how dreadful have been the mistakes of the past. If the officials of the immigration service have anything to say in reply to Mrs. Coolidge's specific allegations, they cannot too soon make their defence public.

The Evolution of the Messianic Idea: A Study in Comparative Religion. By the Rev. W. O. E. Oesterley, D.D. New York: E. P. Dutton & Co. $1.25 net.

"Messianism," according to Dr. Oesterley, is not confined to Hebrew life and thought, although in them and Christianity it has attained its most perfect development. He holds that the leading conceptions comprised under this term, used in its broadest sense, can be traced back to the earliest dawn of the human understanding. The Messianic idea is grounded in some of the elemental characteristics of man's nature, and was originally expressed in certain world-wide myths, traces of which may be found among all primitive peoples. The feeling of fear, the sense of dependence, and the desire to be happy are declared by Dr. Oesterley to be the background of the three great myths, by means of which he thinks primitive man gave expression to his ideas. The "Tehom" myth (so-called from the Hebrew word in the second verse of Genesis) arose out of man's dread of natural forces, especially the sea, with which were associated early speculations regarding a primeval cruel monster inimical to gods and men. The feeling of dependence found expression in what Dr. Oesterley terms the "Jahwe" or "Heilbringer" myth, and the desire for happiness gave rise to the myth of "Paradise" or the "Golden Age." This essay consists of a careful investigation into the origin and development of these myths, their prevalence among various peoples, and their influence on Hebrew thought.

The author finds most of his material for the reconstruction of these primitive myths in the Old Testament, and most of the hints in regard to their development, although Babylonian literature proves also to be a fruitful field. Many of the Biblical allusions become clear in the light of the more primitive and fuller forms from Babylonia, and, in spite of Dr. Oesterley's contention for independent origin among the Hebrews, one cannot help thinking that the great "Tehom" myth was entirely and solely a product of the Euphrates valley, and that in so far as the Hebrews made use of the myth they borrowed from the Babylonians, substituting their own national God, Jahwe, for the victorious Marduk in the great struggle with the primeval monster. The parallels found among non-Semitic peoples are very vague, and we doubt if Professor Oesterley would have discovered them without the spur given to his imagination by his theory. It is surprising how many mythic allusions are found scattered throughout the Old Testament and in the Apocalyptic portions of the New. Nevertheless, the writer's insistence that these myths in their entirety were matters of common knowledge among the people when the Old Testament books were written is not well supported. In seeking to strengthen his case he proposes many emendations in the Hebrew text and makes a number of badly strained interpretations. The development of the idea of "Tehom," who was the mythical adversary of Jahwe, into the Jewish and Christian Satan is interestingly and convincingly set forth and forms one of the best chapters of the book. In the same way, though less clearly, the author traces the development of the "Messiah-Saviour" idea and the full conception of the "Messianic Era" and the "Jahwe" and "Paradise" myths.

Professor Oesterley naturally relies much on the investigation of Gunkel, Gressmann, Brcysig, and others, but his book is a distinct and original contribution to the study of religion. He has brought together a great mass of material, and thrown new light on many obscure passages of the Old Testament. In the form of a dissertation his work was accepted by the University of Cambridge as sufficient for the degree of doctor of divinity, and in publication but few changes were made. It is a book principally for the scholar and the teacher of religion.

The Bretons at Home. By Mrs. F. M. Gostling. Chicago: A. C. McClurg & Co. $2.50 net.

This thick octavo volume, with its wide margins and clear, large type, is an unusually agreeable book to see and to handle. The twelve illustrations in color by Gaston Fanty Lescure are, many of them, poetic and suggestive, and the larger number of photographs made by Mrs. Gostling and her husband are picturesque and not at all amateurish. An introductory chapter in French, contributed by Anatole Le Braz, the distinguished Breton folklorist, pays an exquisite tribute to the author, her book, and her nation, and incidentally reveals one of those beautiful *esprits de savant*, more often met with in France than elsewhere, in whom love of *la douce France*—or even, perhaps, of one among her provinces—seems to refine away all petty ambitions and rivalries, and give to their work almost the character of a religion.

Thus heralded and adorned, Mrs. Gostling's book itself is a little disappointing. In the course of the long journey, extending over nearly a month, and taking us from one end to the other of the Armorican peninsula—"la Bretagne bretonnante"—we have to confess that our interest flags repeatedly. The journey is accomplished sometimes in wagons, sometimes in antiquated chariots, and, for the most part, in a comfortable modern automobile; but the persons who occupy the "George Richard" remain rather tantalizingly vague and unreal to the end. Madame is always Mme. l'Anglaise, who loves Brittany and is interested in folklore and ruins, while M. le Docteur has not even thus much recognition, but is left more shadowy than the phantom saints and outworn gods, who people the strange land through which the motor speeds. Indeed, we cannot avoid the suspicion that it is for lack of this personal note, the slight, yet vivifying touch, evoking the living man and woman from the printed page, that so much of the book seems heavy.

Mrs. Gostling is evidently a scholarly, as well as a cultivated woman. She has travelled widely, and her acquaintance with folklore and legend, comparative mythology and ethnology, is considerable. Moreover, the austere beauty of the coast of Brittany, the fleeting glow of color in its autumn fields, and, above all, the primitive old-world life of its peculiar people, make the strongest appeal to her imagination. Occasionally, a passage of description or of reverie brings to her usually straightforward speech a certain sudden freedom and uplift, and for a moment we feel with her the strong sense of mystery and of doom which broods over the Breton country. We catch an echo of the inexorable decree that nothing achieved by the hand of the Celt shall endure, but that his frustrate spirit shall haunt forever the lands which in life he was impotent to hold.

Possibly, the wide range of her reading and her interests has tended to impair the unity and effectiveness of Mrs. Gostling's book. She makes too great a demand upon the flexibility of her reader's mind. Among the many who would delight to journey with her across the enchanted land of Merlin, stopping at noon or in the evening at little ghost-haunted inns (which provide, nevertheless, exceedingly good dinners), drinking in the beauty of the landscape, the wonders of its old ruined civilization, there are probably not a few to whom her long and learned excursions into folklore and myth, Christian legend and Pagan superstition, would appear a tiresome interruption and delay. It would probably have been better if all these legends

in prose and verse, many of which are in themselves well told, had been collected and printed by themselves as a separate section of the book. On the whole, in spite of M. Le Braz's words of fervent approbation, we must persist in believing that neither he, nor any other of the Latin tradition, would have given us "The Bretons at Home" in precisely this form and arrangement.

La Sardegna Medioevale. By Enrico Besta. Vol. I: Le vicende politiche dal 450 al 1326. Vol. II: Le istituzioni politiche, economiche, giuridiche, sociali. Palermo: Alberto Reber.

In the volumes before us we have what we believe to be the first really serious attempt to write the history of Sardinia during that obscure period which, beginning with the invasion of the Vandals under Genseric, ends with the Aragonese conquest in the Trecento That such a work supplies a very real want will hardly be denied by any student of things mediæval; and we suspect that a very limited amount of self examination will convince the vast majority of our readers that such knowledge as they possess of the vicissitudes of Sardinian story, from the fifth century to the fourteenth, is not only extremely meagre, but also more than a little insecure. For most of us vague notions of Saracenic and Ostrogothic incursions, dateless and undetailed, gradually merge into slightly more definite ideas of Pisan and Genoese victories, combined, perhaps, with some general impression—gleaned, most likely, from the commentators of Dante—of a division of the island into four judgeships. Then, the figure of King Enzo looms largely, golden-haired and debonair; and if, by further cudgelling of our brains, we succeed in calling to remembrance "noble judge Nino," whom the poet rejoiced so greatly not to find among the damned, and

> frate Gomita,
> Quel di Gallura, vasel d'ogni froda,

we may probably flatter ourselves that we have recollected all we ever knew about the matter. Moreover, until Professor Besta wrote this book, it was always extremely difficult to find any remedy for our ignorance. Earlier historians of Sardinia, from Fara and Cambiagi onwards, there have no doubt been, but most of them are entirely out of date, and none of them is accurate enough to satisfy the requirements of modern criticism and modern research, while the learned monographs of Solmi, Brandileone, and Mondolfo are too restricted in their scope to be of any great use to the inquirer who starts without some antecedent knowledge of his own. At last, however, all this is changed, and we can henceforward follow the story of mediæval Sardinia, in its main outlines at any rate, quite as securely as we can those of Florence, Rome, or Naples. That there are still byways to be explored will only add to the pleasure of the student, now that the highways are made practicable.

Of Professor Besta's two volumes the second is undoubtedly the more interesting; but, although they are procurable separately, the judicious reader will not fail to buy them both, since it is obviously impossible to understand the political, economic, and juridical institutions of a people without some knowledge of its history. One warning only is necessary. Learned, accurate, and profound, a perfect mine of reference for further research, "La Sardegna Medioevale" is nevertheless none too easy to read. Like nearly all modern Italian historical works of any value, it is written by a scholar and for scholars. There is not the slightest attempt to gild the pill. Verbatim quotations from the old Sardinian documents, continual interpolations of untranslated Greek and Latin passages in the body of the text, and footnotes which often cover a liberal half of the entire printed page, will hardly, we imagine, appeal to the mere tourist, however thoroughly he may understand Italian.

Notes.

The Malone Society is now in its third year, and will, it is hoped, by the end of 1909 have produced eighteen volumes of plays and collections in return for the guineas of its members. Notice has been given that the roll of the society will be closed on March 20, 1910, after which candidates will be admitted only as vacancies occur and on payment of an entrance fee. Any one interested in the early English drama, and wishing to join before the roll is closed, or desiring further information, is invited to communicate with the honorary secretary, Mr. Arundell Esdaile, at the British Museum, London, W. C.

The Germanic Museum of Harvard University has received a gift of $150,000 from Adolphus Busch of St. Louis for the housing of its collections, now inadequately shown in the old building which was formerly the college gymnasium.

A conference of the recently organized American Institute of Criminal Law and Criminology was held at Madison, Wis., November 26 and 27, to consider alleged defects in our system of punitive justice. This conference was attended not only by lawyers and judges, but by physicians, clergymen, social workers, and students. It was divided into eight committees for the discussion of topics relating to the Jury, Trial Procedure, Trial of the Issue of Mental Responsibility, Appeals and Reversals, Organization of Courts, Juvenile Offenders, Probation, Parole, Pardon and Sentence, and Causes and Prevention of Crime. The main purpose of the conference was educational, and in this it succeeded in calling attention to a number of problems connected with the administration of criminal law in Wisconsin.

The senate of the University of Cambridge has accepted a gift of £20,000 from the firm of Schroeder & Co. of Hamburg, for the endowment of a Germanistic professorship. The new chair will be termed the Schroeder professorship of German.

W. S. Braithwaite's "Book of Restoration Verse" (Brentano's) belongs to a series which will form a full anthology from 1557 to 1910. It falls between the Elizabethan and Georgian periods, and receives its name because "the year, and those succeeding 1685, when the restored monarchy came into power and ruled, gave to the group of writers who were at the height of their powers under the influence of Charles's court a definite and unusual character." Mr. Braithwaite's principle of selection is, it must be admitted, fairly arbitrary. Waller is left for the Elizabethan poets because he is "the product of a declining epoch," whereas Milton is placed in the Restoration because he points forward. It would be hard to be critically more perverse than this; do Dryden and Pope flow from Milton or Waller? Again, it introduces a totally incongruous matter to include the ballads in this volume. Surely, the ballad of Percy and Douglas, which moved Sidney's heart like the sound of a trumpet, belongs not here, but with the Elizabethans. Other incongruities might be pointed out, but after all, we do not look for homogeneity in an anthology. Mr. Braithwaite has brought together a mass of beautiful and characteristic poems, some of them little known, and the publishers have given his work the temptation of fair pages and neat binding.

In the latest of his anthologies, E. V. Lucas has gathered together from the rich gallery of English literature a pleasant galaxy of portraits of "originals." This is, too, as handy a little volume as all the rest, and he calls it, "Some Friends of Mine" (The Macmillan Co.). All the portraits are painted by natives of Great Britain and Ireland, or of these United States, except a group credited to those cosmopolitan geniuses, Plutarch, Vasari, Heinrich Heine, and the elder Dumas; and the volume is almost altogether made up of prose passages, though the last piece of all is Oliver Wendell Holmes's, "Our Last Friend." Perhaps it is worth while, now that we have mentioned Holmes, to enumerate the other Americans to be met with here, as authors: name Lowell, and Washington Irving, and Joaquin Miller, and Leland, and the list is told. There has been no straining after esotericism in the selection of the English representatives, either; yet the range is a generous one. And the classification is one to whet one's literary appetite: Chance Acquaintance, Urban Humorists, Country Gentlemen, Men of Law and Sportsmen, Wild Irishmen and Six Painters, Bookworms and Teachers of Youth, make a pageant whose passing one is the happier for. Mr. Lucas's modest volume contains a fine collection of pages apt for reading aloud; and so we hope that genial fireside art is not yet wholly lost.

In his "Last Days of Charles II" (Henry Frowde), Dr. Raymond Crawfurd has made a most interesting contribution not only to what he calls the "medicine of history," but to history itself. The last ill-

ness and death of Charles II have been described frequently and minutely. But, however interesting and picturesque these narrations have been, Dr. Crawfurd justly declares in his preface that no historian appears to have described the events with any approach to accuracy, while the only considerable medical authority who has written on the subject has confirmed the errors of historians by giving his authority to a wrong premise, thus establishing a wrong conclusion. The present author has based his account largely on the interesting and authoritative statement of the case and its treatment written by Sir Charles Scarburgh, first physician to Charles II, which is still preserved in the library of the Society of Antiquarians at Burlington House. This he reprints in an appendix, both in the original Latin and in translation. From it, from a mass of contemporary authority, and from his own medical knowledge, he reconstructs in minute detail the progress of the case with all its attendant circumstances, arriving at the conclusion that Charles's death was due to chronic granular kidney accompanied by uræmic convulsions. Such a conclusion has much value to the political historian, since previous accounts have not merely confused the subject, but have often left the impression that the darker suspicions of the time regarding the King's death were not wholly without foundation. No less interesting than the story of the peculiar circumstances attending this last illness is the account of the treatment of the case. The list of remedies and prescriptions, the diagnosis and the means used by the fifteen attendant physicians to cure or relieve the unfortunate patient, give a vivid picture of seventeenth-century medicine. A pharmacopœia which included sal ammoniac, Jesuit's bark or cinchona, as well as bezoars (a concretion found in the stomach of an East Indian goat), and spirits of human skull, made from the skull of a man who died a violent death, marks the transition from mediæval to modern medicine in striking fashion. Illustrated with portraits of Charles II and his physicians, King and Scarburgh, with reproductions of Charles's effigy and a mask drawn from it, the little essay makes a most interesting study, well worth reading.

A clear and readable essay on Lincoln, expanded from a popular address given in New York city on Lincoln Day, February 12, 1909, forms the body of George Haven Putnam's "Abraham Lincoln; the People's Leader in the Struggle for National Existence" (G. P. Putnam's Sons). While the presentation of the subject is without novelty, the language is simple enough to appeal to young people, and the narrative is enlivened by interesting reminiscences of the author's army life. An appendix reprints the revised text of Lincoln's Cooper Union speech, with the contemporary annotations of Cephas Brainerd and Charles C. Nott, and some hitherto unpublished letters of Lincoln and Nott regarding the revision and publication of the address.

The original inventory of the contents of Mount Vernon in 1810, filed in the Fairfax County Court House, was lost during the war; and its recovery was deemed so improbable that dependence was had on an imperfect copy, retained in one of the branches of the Washington family. The value of the document lay in its reasonably full list of the personal possessions of Gen. Washington and a quite complete list of the books in his library. Therewith it would be possible, in a general way, to test the many claims of Washington relics, and to prove the forging of the bookplate, and its insertion in books which were never in the Washington library. This inventory came to light in a Middle Western State, and has been very prettily printed in a limited edition by the owner, W. K. Bixby of St. Louis. It is thus accessible in a full form for the first time. The list of books had been already elaborately printed by William C. Lane. It may be noted that in the *Virginia Historical Magazine* for October is published a list of the library of Daniel Parke Custis, whose widow Washington married. For the first few pages of the manuscript the books are divided between Washington and his stepson, Jacky Custis, thus showing the source of some of the volumes in the general's library, thought to be most indicative of his taste, such as Duhamel's "Husbandry" and Bland's "Military Discipline."

"Italian Vignettes," by Mary W. Arms, is just one more of those perfervidly sentimental little books which paradoxically enough are inevitably provoked by that most sensible of people, the Italians. All the customary glow is here, and not much else. May it not seem ungracious, passing other inaccuracies, to say that the well-known painter of Capri is not Henry but Charles Caryl Coleman, and that the "Albine" mountains are unknown to orographers. The book is attractively got up by the publisher, Mitchell Kennerley.

Edward Hutton has found the way to Rome, and his book under that title bears the traces of his northern route. A mediævalist and romanticist of the purest water, he is often in the attitude of grudging Latin Rome its renown. This temper is by no means unusual. We have heard it said that but for the Roman remains Rome would be wholly delightful. Yet this is an unhappy view for a guide to take. To omit the fragments of the Ara Pacis requires hardihood; to fail to praise the Arch of Titus—one of the few delicately proportioned monuments of Imperial times—suggests prejudice. In fact, numerous omissions and inaccuracies bring the work below the author's standard. One may imagine omitting Sta. Agnese *fuori*, but hardly the neighboring tomb of Sta. Costanza with its important mosaics. Again the Latin Tombs want at least a word, not to mention the Lateran Museum, if only for its splendid series of sarcophagi. Is Christ represented as "Pantocrator" in the apse of Sta. Pudenziana? If so, the intimacy of the composition, its significant difference from later ones, should have been pointed out. It is not true that all Cavallini's work in Southern Italy has perished, unless, indeed, Mr. Hutton challenges Venturi's plausible attribution of the frescoes in Sta. Maria Donna Regina, Naples. To slight the remnants of Arnolfo at Rome requires either courage or carelessness. The book is far from up to date. The new Discobolus of the Terme Museum is unmentioned, as well as the lovely Temple Ministrant discovered three years ago at Anzio. The mighty figure of a stricken Niobid, in the Banca Commerciale, is similarly passed by. The rearrangement and augmentation of the Vatican picture gallery is acknowledged only in a note. In short, this book should have begun with its second edition. However, it is enthusiastically written, and will doubtless warm the hearts of those whose Roman days are behind them. For such sentimental fireside travellers, indeed, we judge it is chiefly intended. Maxwell Armfield's sixteen color sketches, as here reproduced, have an eighteenth century reserve and lack of fibre, but are fairly successful in evoking a mild glamour. The book is published by the Macmillans.

The seventy-fifth anniversary of the founding of the Université libre de Bruxelles has been recently celebrated. Delegates from the various foreign universities were in attendance, and honorary degrees were conferred upon several of these, including M. Poincaré of the French Academy; Professors Le Dantec, Lavisse, and Lanson of the University of Paris; MM. Roux and Metchnikoff of the Pasteur Institute; Professor Westlake of Cambridge, and others; also upon the poets Maeterlinck and Verhaeren, and upon Duke Charles Theodore of Bavaria, who has, since then, died.

When we say of Prof. A. E. Taylor's "Plato," in the Dodge Publishing Co.'s Philosophies Ancient and Modern, that it will mislead the reader less than any introduction to the Platonic philosophy with which we are acquainted, we mean this for high praise. Professor Taylor's style and method are a happy mean between the conventional vagueness of popular philosophy which tells the student nothing, and the unavoidable pedantry of specialization which overwhelms him with detail and confuses him with controversy. The brevity of his exposition omits all philological apparatus, passes over many minor matters, and neglects some niceties of interpretation. But in perspective, proportion, and the due distribution of emphasis it is essentially sound and right, in refreshing contrast to some more ambitious attempts of recent years. Plato's fundamental conceptions and aims, the meaning of his theory of ideas often miscalled idealism, the purpose of his "Republic," and the true relation of his thought to the life of his time, to the criticism of Aristotle and the moderns, and the eternal problems with which it deals, are succinctly, correctly, and lucidly set forth.

Professor Taylor does ample justice to all the positive achievements of modern philological research in the determination of the probable relative dates of the dialogues. But he is completely emancipated from the fantastic hypothesis of an earlier and later system of Platonic metaphysics which has introduced so much confusion into the recent literature of the subject in England and Germany. His book may be recommended without reserve as an introduction to the study of Plato for the student and for the general reader who desire in brief compass an intelligible and trustworthy account of the life and teaching of the world's most influential thinker and greatest artist in prose. While it cannot vie as a work of literary art with Pater's "Plato and Platonism," or as entertaining reading with Emile Faguet's "Pour qu'on

lise Platon," it is far more sane and true than either. Its readers will have much more to learn if they care to pursue the subject further. But they will have nothing to unlearn.

Dr. William Newton Clarke's elaborate and thorough treatise on "The Christian Doctrine of God" is followed quickly by personal narrative of his changing views regarding Holy Scripture during his long life as a Christian pastor and teacher. The new volume is entitled "Sixty Years with the Bible: A Record of Experience" (Charles Scribner's Sons). With entire frankness, in which mistaken opinions and inconsistent judgments are recorded faithfully, he describes the road he has travelled, from quiet confidence in an infallible rule of doctrine to critical use of a partial record of an expanding religious life. This is not the story of a series of catastrophes or cataclysmic illuminations. Dr. Clarke moved very slowly toward his goal, and kept sure hold of his faith through the entire process. Nevertheless, the change from his early attitude toward Scripture to that from which he wrote his latest volume is nothing less than revolutionary, and in Dr. Clarke's treatment it appears absolutely necessary. It is difficult to see how any one can find him at fault at any point for yielding to the newer views, as they appeared before him, and equally difficult to believe that his high reverence for the Bible from his present position is unfounded. This frank recital of his experience will serve admirably as a guide to less thorough and discerning minds.

The "Insel-Almanach auf das Jahr 1910" (Leipzig: Insel-Verlag), decidedly one of the best literary annuals issued in such abundance by German houses, deals largely with Schiller, but by no means confines itself to him and his recent jubilee. The rest of the contents are varied and well selected, both old and new matter being given with rich illustrations.

An admirable series of photographs of the temples of India is given in the *National Geographic Magazine* for November. The most striking impression gained from them is made by the wonderful ornamental carvings in stone, which, in one instance, represent an amount of labor "such as never was bestowed on any surface of equal extent in any building in the world." The contrast between the India of ancient times and of to-day is shown by the first picture of the series, the splendid Y. M. C. A. building in Bombay.

Adolph Growoll, long managing editor of the *Publishers' Weekly*, died in New York city December 7, aged fifty-nine years. He was the author of "The Booksellers' Library and How to Use It" (1891); "James Thomson: a Biographical and Bibliographical Sketch"; "The Profession of Bookselling" (two volumes, 1893); "Publishers' and Other Book Exhibits at the World's Columbian Exposition" (1893); "American Book Clubs: Their Beginnings and History, and a Bibliography of Their Publications" (1897); "Booktrade Bibliography in the United States in the Nineteenth Century" (1898); "Frederick Leypoldt, a Biographical Sketch" (1899); "Henry Harrisse, a Biographical Sketch" (1899); "Three Centuries of English Book Trade Bibliography" (1903); "The Booksellers' League: a History of Its Formation and Ten Years of Its Work" (1905).

Daniel Ayres Goodsell, the Methodist Episcopal bishop resident in New York, died December 4 at his home in this city. He was born in Newburgh November 5, 1840, and was graduated in 1854 from New York University. For seven years, from 1880, he was the literary editor of the *Christian Advocate*. In the course of his official duties he travelled to China, Japan, Korea, Italy, Bulgaria, Switzerland, Germany, Scandinavia, and Finland, and also visited nearly every part of the United States; and he was the author of two books, "Nature and Character at Granite Bay" and "The Things Which Remain."

William Alfred Packard, professor of the Latin language and literature at Princeton University, and formerly a professor at Dartmouth College, died in Princeton, N. J., December 2. He was born in 1830 in Brunswick, Me., and was a graduate of Bowdoin College and of Andover Theological Seminary, and studied (1857-8) at the University of Göttingen. He revised, with translations from later editions, Curtius's "History of Greece."

Charles Gross, professor of history at Harvard College, died in Cambridge, Mass., December 3. He was born at Troy, N. Y., February 10, 1857. His education was at Williams College and at Göttingen. From 1884 to 1888 he was engaged in literary work in London; from 1888 he was connected with the history department at Harvard. He was the author of "Gilda Mercatoria" (1883); "The Exchequer of the Jews in England in the Middle Ages" (1887); "The Gild Merchant" (1890); "Select Cases from the Coroners' Rolls" (1896); "Bibliography of British Municipal History" (1897), and "Sources and Literature of British History" (1900). He was the translator of the "Political History of Europe," by Lavisse (1891), and of Kayserling's "Christopher Columbus" (1893); and was a contributor to the *Political Science Quarterly*, *American Historical Review*, and other journals.

From Paris we learn of the death of Mlle. Renée Vivien, the author of various volumes of verse, of which the earlier "Etudes et préludes," "Cendres et poussières," and "Brumes de Fjord" were published under the name René Vivien. Besides several volumes of poems, suggestive, in the main, of Baudelaire, she published a romance, "Une Femme m'apparut," and collections of stories. "Les Flambeaux éteints," a final volume of verse, is announced for posthumous publication.

Science.

The Natural History of Igneous Rocks. By Alfred Harker, M.A., F.R.S. Fellow of St. John's College, Lecturer in Petrology in the University of Cambridge. New York: The Macmillan Co. $3 net.

This is a book for the trained specialist, but it has a message for the layman. With unexcelled completeness and force, Mr. Harker has presented the latest ideas as to the nature and activities of the fluid material emanating from the earth's interior. Most of us live far from the few openings in the crust of the globe where we may look upon liquid rock. It is difficult to realize that the earth is merely the nearest of the wandering stars, a star covered with a thin film of frozen matter. Even the catastrophes of Martinique and southern Italy hardly suffice to drive into our consciousness the fact that we are living on a heavenly body. Mr. Harker's book helps one to secure this broad, true view of the planet. Not only in the spectacular volcanoes of the present, but yet more notably in the fashioning of ancient granite or porphyry, in the immense work of the internal gases through geological time, and in the millions of ancient extrusions and intrusions of once liquid rock, the earth shows its kinship with the sun.

The work is not a treatise descriptive of the many species of igneous rocks, but is chiefly devoted to the problem of their origin. Molten rock is called magma. That magma which reaches the surface bears the familiar name lava. The author wisely points out that the magma, which has been intruded into the earth's crust and crystallized there, is quantitatively much more important than all the lavas together. The surface rocks of the crust are radio-active. No one can yet say how much of the earth's internal heat is due to this subatomic energy, nor to what extent the inevitable cooling of the globe by radiation is thus counterbalanced. Mr. Harker evidently believes that most of the vast heat-energy represented in the igneous magmas is an inheritance from a former, hotter state of the globe.

The mechanism by which molten rock is transferred from the depths to levels at or near the earth's surface is referred by the author to two contrasted kinds of crustal movement. The transfer is a hydrostatic phenomenon, the magmatic fluid being displaced when blocks of the earth's crust are notably moved. If the movement of blocks is vertical along faults, as in the formation of many plateaus, the magma may be squeezed through the fault-planes, which appear on the surface as lines of fissuring. If the movement of crust blocks is due to horizontal pressure, as in most mountain-ranges, the magma is displaced, but as a rule can reach the surface only at scattered points. Accordingly, volcanic discharges are divided into fissure-eruptions and central eruptions. A similar distinction is attempted among the intrusive bodies which never reached the earth's surface.

An inductive study has led Mr. Harker to the division of igneous rocks into two great classes, called the Atlantic and Pacific branches. They are principally contrasted by their relative content of soda and potash, these alkalies being, on the average, more abundant in the Atlantic branch than in the other.

The two names correspond to the prevailing division of igneous rocks into the "alkali-group" and the "sub-alkali" or "lime-alkali" group. The new naming was proposed by Mr. Harker in 1896 to emphasize his view that "the one type is found around the Atlantic and part of the Indian Ocean and in the Polar basins, the other, generally speaking, around the Pacific." The appropriateness of the names depends on a knowledge of rock-distribution which is as yet very meagre, and especially so regarding the Pacific area. As this half of the earth is explored alkaline rocks are discovered in many regions, such as the Hawaiian Islands, the Celebes Islands, Tahiti, Southern China, Western Mexico, Western British Columbia, Australia, Tasmania, and New Zealand. On the other hand, the sub-alkaline rocks are much more abundant than the alkaline rocks in the Atlantic-Indian-Polar area itself. It appears, therefore, that the new names are not advisable substitutes for the older non-geographical names of these two chief classes of eruptive rocks.

The most valuable portion of the book is a clear, detailed statement as to how actual igneous rocks have been formed from molten magma. The advance of physical chemistry during the last dozen years has made it evident to the petrologist that rock-magmas are solutions, and that, in general, the same laws as those controlling the crystallization of water solutions, or of alloys, have governed their solidification. This new conception of the earth-stuff is outlined by Mr. Harker with great skill. He shows some of the ways in which magmas may divide into crystal-aggregates and mother-liquors, thus explaining, in part, the diversity of the igneous rocks. For the rest, that diversity is chiefly explained by other causes of "magmatic differentiation." The book is weak in the discussion of the conclusions, reached by many working geologists, that large and numerous bodies of magma have been affected fundamentally in chemical composition through solution of solid rock-matter. Since the natural history of igneous rocks should be based on a sound and full theory of their parent magmas, this failure of treatment is in contrast with the general excellence of the book.

The last chapter contains a keen adverse criticism of the new "Quantitative" classification of the igneous rocks as developed in the well-known work by Messrs. Cross, Iddings, Pirsson, and Washington.

The pity of modern science is that its most exciting hunts for the truth are made in a forest of observations and experiments into which the average man cannot follow. Only a few investigators have the power to show their prizes to the layman and to tell him of the rules of the hunt. This Mr. Harker has not specially tried to do. His engrossing study is young and difficult. He has done petrology a great service in writing so fully and clearly, though necessarily in a technical manner. Another twenty years of work may give us a similarly able "popular" book on the origin of the igneous rocks. Meanwhile the present work may be profitably undertaken by many readers of general scientific training. They will find a new "ethics of the dust" among these rocks, which are obedient to their own great code of social laws.

Nothing more strikingly reminds one that the sport and business of flying have come to stay, than the serious attention given to the subject, especially in Germany, by those writers whose pride it is to strike while the iron is hot. The latest book for air-travellers is Dr. Hermann von Schrötter's "Hygiene der Aëronautik" (Leipzig: Grethlein), an illustrated volume, crammed with footnotes and warnings for the navigator of the clouds. This book has an appendix and a bibliography; but the "Flugmaschinen: Theorie und Praxis" of Georg Wellner (Vienna: A. Hartleben) deserves more respectful attention as a scientific production. Admitting that the kite type of machine has thus far been most successful, Wellner prophesies a still greater success for the propeller flyer, far though it is from the market. Zeppelin's performances receive very curt review here. Another work, more popular, perhaps, and giving in some fifteen or twenty essays a history of the conquest of the air to date, is "Die Eroberung der Luft" (Stuttgart: Union Deutsche Verlagsgeselischaft); with an introductory greeting reproduced from Count Zeppelin's autograph. This is an even more fully illustrated volume than the others, and the chapters are by a variety of writers. The enthusiasm of this volume's tone is suggested by the fact that Dr. A. Stolberg's contribution is entitled: "Reaching the North Pole by Means of a Balloon."

Drama.

The Incomparable Siddons. By Mrs. Clement Parsons. New York: G. P. Putnam's Sons. $3.50 net.

This latest work by Mrs. Parsons exhibits all the characteristics that distinguished her "Garrick and His Circle." It shows minute and comprehensive knowledge of the dramatic period of which it treats, is written with enthusiasm tempered by critical discretion, and, although somewhat over-zealous in the collection of irrelevant or insignificant detail, is full of interesting matter. Naturally, it adds but little—nothing that is important—to the stock of common knowledge of the public and private life of England's most famous actress, but it presents, in orderly and attractive form, the essence of the mass of contemporaneous and later theatrical literature, in which she figured so largely. Wherever statements of fact are concerned, reference is made to the quoted authority, and the book, therefore, will not only prove a boon to the ordinary reader, but a valuable aid to the more deliberate student of theatrical affairs.

It is not necessary to give a descriptive or critical analysis of the book. Enough to say that it throws all the known traits, professional and private, of Mrs. Siddons, into bold relief, and so recreates, as it were, an extinct personality. This constitutes its salient merit and charm. It recalls the almost unanimous testimony of credible eye-witnesses to the regal beauty, the matchless grace and dignity, the melting pathos, and the majestic passion of this queen of the tragic stage. Of her towering prëeminence in her own era over all rivals of her own sex there can be no reasonable doubt. This is proved by the length of her reign, the crowds she drew, the fortune she amassed, and the effects she produced upon her audiences. Women frequently shrieked and swooned at her most moving passages. Remembering the habits of the day one is tempted to wonder whether there may not have been some trace of the alcoholic in these manifestations. Doubtless there must have been some marvellously poignant notes in her emotional utterances. But was she actually incomparable? Has the divine spark vanished utterly from the modern stage? Have Rachel, Kean, Macready, Cushman, Ristori, Janauschek, Bernhardt, Duse, Booth, or Salvini no place in her sphere? Genius is rare, but it was not a monopoly of the Kembles.

The truth is that it is futile now to try to estimate the genius of Siddons—or of Garrick—in a balance. Times, standards, dispositions, points of view—all have changed. Siddons, as she was, probably would not be tolerated to-day. But the lesson of her career is none the less vital. Genius as she indisputably was, it is tolerably safe to assume that her triumphs were quite as much the result of conscientious and indefatigable study as of any special inspiration or physical endowments. She did not act, as Garrick appears to have done, wholly upon impulse and instinct. And herein, perhaps, lies the one moral of her career that is of present practical value. It must not be forgotten that, in spite of her early and brilliant provincial successes, she failed, at first, to please a London audience. It was only after a prolonged and arduous second apprenticeship in the stock companies of provincial cities—notably at Bath—that she returned with developed and matured powers, to dazzle the metropolis. Fortunately, we have abundant testimony, from herself and others, concerning her methodical and intelligent habits of work; and they are significant. Her

measured diction and broad, free, sweeping gesture were in accordance with the tradition then prevailing. But in her impersonations and readings she copied no one. Moreover, it was her rule to study the whole play in order to get the true perspective of the character she was to personify. This degree of artistic integrity was as uncommon, probably, in the Georgian era as it is now. That she was impressionable and imaginative is fully proved by her own account of the nervous terror into which she was thrown by the murder scene in "Macbeth"; and her declaration, several times repeated, that she suffered in her own person the woes which she simulated, is worthy of careful note. She even says that she never played distressed mothers so well as when she had maternal griefs of her own to express. This confession of self-identification with her parts leads to the natural inference that —although supreme along certain lines —she was deficient in versatility. And this suspicion is strengthened, if not wholly justified, by the fact that her Lady Macbeth (probably her greatest achievement), her Katherine, Constance, and Volumnia, the chief jewels in her dramatic crown, contain practically all the emotional ingredients of her other popular parts, such as Belvidera, Jane Shore, Mrs. Beverley, Lady Randolph, etc. As Juliet she was only partly successful, while in Portia, Rosalind, Beatrice, and other comedy parts, she was distinctly unsatisfactory.

But in tragedy she was a superb actress and a great artist, a noble product of the stock company, the only system that ever has produced, or ever can produce, a generation of finished players. And she shed lustre upon the stage by the purity and dignity of her womanhood. Mrs. Parsons's volume is rich in illuminative details of her private life as wife and mother, of her fortitude in affliction, and of her prevalent sanity amid all the adulation of which she was the object. It contains also much interesting matter concerning her immediate family, her contemporaries and descendants, to which only this brief reference is necessary now. In short, it is a full and good book which no student of theatrical literature can afford to neglect.

"The Nigger," the latest production of the young dramatist, Edward Sheldon, which has just been added to the repertory of the New Theatre, is a pretentious, sensational, crude, and insignificant piece. In a purely theatrical sense it is effective, in spite of its improbabilities and anti-elimaxes; but Mr. Sheldon, like other beginners, constantly mistakes violence for strength, and platitudes for profundity. He touches on only a few points, and those the most obvious, in the vast and intricate subject which he has selected, and his treatment of them is not remarkable either for perception or tact. Throughout, his play is far more theatrical than human. It is founded upon the almost incredible premise that a Southern gentleman would put even his own illegitimate offspring, by a colored woman, in the place of his legitimate white heir who had died. Some such invention was necessary to the central scene of the play, in which the hero, now the honored Governor of his State, and noted even among his intimates for pride of race, is suddenly confronted with the fact that he has colored blood in his veins, and threatened with instant exposure if he will not veto a prohibition bill which he has resolved to approve. This is a poignant situation, almost worthy of tragedy, but it is reached by such transparent artifice that it can be ranked only as an ingenious and effective bit of melodrama. A later scene, also of striking theatrical quality, in which the Governor manfully confesses to his betrothed bride the bitter truth of his origin, ends with a stroke of crude realism which is as inconsistent as it is inartistic, and chills the hitherto sympathetic spectator. But the whole second act is full of stirring theatrical stuff. At the last the Governor, forestalling his enemies, resolves to publish the story of his ancestry, resign from office—he has already refused to marry the girl who would have shared his degradation—and devote his future existence to the service of the colored race. Undoubtedly the play makes a vivid representation of deplorable facts, but the exploitation of evils is not always the best way of abating them. "The Nigger," with its somewhat lurid treatment of both crime and sentiment, is more likely to provoke prejudice than to promote thought. The representation by the New Theatre Company was one of all-round competence. Melodramatic details were especially well done.

Miss Billie Burke's next appearance upon the New York stage will be in the Lyceum Theatre, in January, when she will be seen as the heroine of "Mrs. Dot," the comedy by W. S. Maugham, which had a year's run in London, when it was produced there the season before last.

A special performance of "Ingomar" in the Liberty Theatre, New York city, is promised for December 31, for the benefit of the Lincoln Association. Mabel Taliaferro will then essay the part of Parthenia for the first time, while William Farnum will appear as the barbaric chieftain.

At Drury Lane Theatre, London, a bronze medallion of Sir Henry Irving was recently unveiled, being the gift of a committee of Italian actors and actresses, of whom Tomaso Salvini was a prominent member

The next play to be produced at the Vaudeville, in Paris, will be M. Bourget's "La Barricade."

And still we hear of those endless rehearsals of Rostand's barnyard drama at the Porte Saint-Martin, in Paris! Lucien Guitry, it seems, was unable to wear the machine devised for his beak and comb and head, and it all had to be redesigned; it has been decided, too, that the Dog (who is Jean Coquelin) shall walk on his hind legs. "Chantecler" presents so many difficulties as a stage production that we cannot help being very skeptical as to its ultimate value.

Henri Lavedan has won another triumph at the Théâtre Français with his new play, "Sire." His heroine is Mlle. de Saint-Salbi, an old aristocrat, who, in the troublous year 1848 is still convinced that her beloved dauphin—son of Louis XVI—is still alive, and her rightful king. She had seen the prince as a child, and her longing to meet him once more is so intense that it threatens life and reason. So her physician and her confessor plot a kindly deception. They have discovered a Bohemian actor, wonderfully like Louis XVI, and him they secure to impersonate the missing heir. The rascal plays his part well, and the old lady is in an ecstasy of blissful adoration. But he cannot help making love to a pretty waiting maid, and this leads to his detection. Mlle. de Saint-Salbi is broken hearted over her disenchantment, and the trickster, too, is overwhelmed with shame. But what can he do to redeem himself? At this moment all Paris is in uproar as revolutionists march to the overthrow of Louis Philippe. The ancient royalist reminds him that he at least has a king, and bids him to die in his defence. Presently she hears that he has indeed laid down his life at the foot of the throne, and thus helped to ensure the escape of the fleeing monarch. M. Huguenet triumphed in his exquisite presentment of the mock prince, while Mme. Pierson made of the aged heroine a real and a sympathetic personage.

Music.

Handel. By R. A. Streatfeild. New York: John Lane Co. $2.50 net.

Why has England never been one of the great musical countries? One of the answers most frequently given is that musical effort was paralyzed by the exclusive worship of Handel, which prevailed for several generations, the English public having no ears for any music beside his, except Mendelssohn's. These two men, it has been said a thousand times, had a monopoly which throttled all competition, and which it took even a giant like Wagner many years to destroy. Under his influence, however, and that of Beethoven (whose first effective missionary was the Wagnerian, Hans Richter), Schumann, Brahms, Chopin, Liszt, Grieg, and the modern Frenchmen, a revolution was presently brought about. The new ideas proved powerful fertilizers, and there has now grown up an English school which has some presentable names.

As a natural result of this reaction, Handel was dethroned. There is no doubt, says Mr. Streatfeild, that at the present time in England "Handel is unpopular with those who are the mouthpieces of cultivated musical opinion." Dr. Ernest Walker, in his "History of Music in England," talks light-heartedly about consigning him to the rubbish-heap. Nor do the many performances of "The Messiah" prove that he is still beloved by the masses. Many thousands of Englishmen attend this oratorio simply as a religious exercise. If Handel were really popular, his other oratorios

—not to speak of his operas and instrumental works—would not be shelved so completely as they are. Yet, in spite of the trend of modern criticism, Mr. Streatfeild looks for a return of popularity for this former idol, or at least of more general appreciation; and his book is an attempt, clearly reasoned and admirably written, to show in what way this appreciation will manifest itself. It is the inner meaning of his music that will be sought for. Hitherto too much attention has been paid to mere questions of form. The time is coming when people will grasp the truth that what a man has to say really matters, and that the way he says it is comparatively unimportant; and when this point of view is attained, our author believes there will be a reaction in favor of a man who had a great deal to say, even though the way in which he chose to say it now seems absolutely out of date.

Thus far it is easy to accept Mr. Streatfeild's thesis. Strangely enough, he does not draw the only sound conclusion that follows from his premises. Handel's forms are dead; they cannot be revived; and the only way to save the wheat from the chaff is to winnow it and present it in modern vessels. Robert Franz and others have attempted to do this; Franz, in particular, made some of his idol's scores palatable for modern hearers, and he also selected from his obsolete works, particularly the operas (which are absolutely unknown to the public), a number of airs which, better than anything else ever written, prove our author's main contention—that Handel had a great deal to say which would interest us if we knew it. Yet, instead of embracing the noble, enthusiastic, scholarly, and judicious Franz as his strongest ally, he mentions him only once, and then contemptuously, in speaking of a certain pause in "The Messiah":

> This pause Mozart filled up with meaningless chords, while Franz, not to be outdone in tastelessness and stupidity, actually added a passage for the clarinet, anticipating the vocal phrase and completely robbing it of its marvellous dignity and pathos.

Apart from this blemish, the analysis of Handel's oratorios is most commendable. More interesting still is that of the obsolete operas. Mr. Streatfeild sees no reason why those who still have ears for G'uck's operas should not appreciate the beauties of Handel's. In his own day they were extravagantly praised, but their vogue was brief; a quarter of a century after his death they had passed almost entirely from the current repertory, and have been kept out ever since. Mr. Streatfeild not only tells about the librettos and the music of these operas, but also goes into the conditions, so different from those of our day, under which they were performed. He makes clear how political conditions sometimes favored Handel, at other times ruined him. (An interesting book might be written on Politics and Music.) At one period his aristocratic opponents fought him by carefully choosing the evening of his oratorios for their balls and card parties, even violating the sanctity of Lent in their endeavor to crush him. His life was a succession of ups and downs, which are here narrated with the vivid interest of fiction. Nor are anecdotes scorned. One of the best is the incident at a rehearsal when a young basso blundered terribly; whereupon Handel turned on him savagely, with the words: "You scoundrel, did you not tell me you could sing at sight?" and the singer answered: "Yes, sir; and so I can, but not at first sight."

Heretofore, American composers, with the exception of MacDowell, have been scantily represented in Germany in the programmes of American vocalists, the marches of Sousa, and an occasional comic opera. Grateful, then, is the tribute paid to American music in the acceptance for production next February at the Royal Opera in Berlin, of the three-act opera, "Poia," by Arthur Nevin. "Poia" is the legend of the Red Indian Mahomet, sent to earth by Natosi, the Sun God, and branded by him with a scar on the brow to expiate the sins of man. Poia loves Natoya, an Indian maid, who rebuffs him of the scar, and favors the suit of Sumatsi, the Evil-doer. Nenhau, the medicine woman, tells Poia the origin of his curse, and bids him seek the Sun God and pray for its removal. It is a simple theme, simply told in lyrical language by Randolph Hartley. Seven themes of Indian melody have been employed by the composer as leading movements. Mr. Nevin uses seven percussion instruments; four tympani, the Indian tamtam, a species of huge brass cymbal, and the xylophone. His opera lends itself to magnificent stage-pictures, and in such the Royal Opera excels. Dr. Karl Muck is in charge of the orchestra, and the opera is already cast. It is tactful of the management to have placed the leading parts in the hands of the German members of the company; for the jealousy excited by the prominence attained by American singers like Miss Farrar, and Messrs. McClennan and Griswold, has reached such a pitch in Berlin that their allotment to American singers might actually have endangered the success of this the first American opera to see the light in Europe.

Music lovers—and those of this country in particular—are under obligations to Venezuela for having given to the world the greatest of living pianists of the fair sex, Teresa Carreño, who was the teacher of our greatest composer, Edward MacDowell, and who has done much to make Europeans admire his music. She seldom plays his second concerto anywhere without having to repeat the scherzo. She has now undertaken to do missionary work for his fourth sonata, the "Keltic," which the professional pianists have not heretofore deigned to put on their programmes. Inasmuch as not even Beethoven's sonatas were played publicly in London till two decades after his death, it may appear premature to bring forward MacDowell's greatest work; but the audience which heard Mme. Carreño play it in Carnegie Hall last Saturday afternoon did not seem to think so. Such cordial applause as followed it is not often heard at a piano recital. In this sonata one finds the combination of virile energy with exquisite feminine tenderness which was a trait of Bach, Wagner, Grieg, and other European masters of the first rank; and in doing justice to both these attributes the Venezuelan once more proclaimed her place among the leading pianists most eloquently.

Handel's oratorio, "Joseph," will be performed on February 23, 1910, at Halle, the composer's native city. The date marks the hundredth anniversary of Handel's birth, and this will be the first rendition of this oratorio anywhere in Germany.

The Austrian Government intends to grant the Philharmonic Society of Vienna $600 a year. A more liberal endowment was made to this orchestra not long ago by one Rudolf Putz, who left it his house, valued at $20,000. Inquiry disclosed the fact that Putz had been a Philharmonic subscriber for thirty years and that this was his way of expressing his gratitude for the happy hours he had enjoyed.

Twenty-two works of Richard Wagner will be produced during the season of 1910 at Munich, at the Theatre of the Prince Regent, and seven of Mozart's at the Theatre of the Residence. Among the novelties included are Wagner's "Fairies" and Mozart's "Bastien and Bastienne" and "Titus."

The New Bach Society has announced that its fifth Bach festival, at Duisburg, will take place June 4-7, inclusive.

Art.

THE ISOLATED ART OF DESIGN.

The London Trade Guilds are commonly supposed to be addicted solely to dining and the wearing of obsolete finery. Sometimes, however, they quit the gastronomic routine for charitable or other public purposes. For example, the Worshipful Company of Carpenters, perceiving certain defects in the building trade, last winter invited a number of architects and decorators to lecture on the needs of the situation. Their admonitions are now collected in a book called "The Arts Connected with Building." Naturally, there was considerable diversity of opinion among these nine lecturers, a fact which lends significance to their agreement on one point—namely: that the building trades languish because the designers are not practical workers, while the practical workers are incapable of design.

Probably it occurs to nobody to consider how the bad stone work, wood work, furniture, and metal-work of today are created. That they are produced under factory conditions most of us vaguely know. What we do not realize is that they are commonly designed by

persons with no knowledge of the material. They are thought out not in honest stone, clay, wood, or metal, but in balanced curves and surfaces. Their design is not even workmanlike, but an isolated, nebulous abstraction called decoration. Their creators do not control materials, they simply create patterns. Good designs cannot come this way. It is actual contact with the material that gives raciness and idiom to any form of construction whether plain or decorated.

Upon the worker the effect of academically imposed design is even worse. Where proficiency requires that he should enter into the spirit of his pattern, he becomes at best a lifeless copyist and often a sullen executor of a design which he knows to be unfitted for his tools and materials. Until the eighteenth century the artisan was largely his own designer. A carpenter, for example, not merely supplied but also invented the simpler forms of woodcarving. The plasterer was a decorative modeller. Even the plumber adorned his pipe-head and cisterns with vigorous decoration that is now sought by the art collector. Nor was the demand on the artisan's invention severe. Each trade had its inheritance of methods and patterns; even dies and moulds. It was the existence of this repertory that steadied the workman designer and made his humble inventions actually better than our more pretentious efforts. Of course, the factory destroyed utterly the traditions of the handicrafts, and since the factory has plainly come to stay, the question is how to reconcile fine designing with the hard conditions of modern manufacture.

By actual reversion to handwork, something may be done. But it does not seem likely that the various craftsmen shops will be numerous or influential enough to change the entire manufacturing situation. Evidently, too, routine factory conditions hardly permit of the inventive workman. One of the London lecturers tells of a workman who managed to interest himself in the task of assembling machine-made parts into furniture. The standing order to the foreman was to change this man's job whenever signs of interest appeared, for it was found that when he used his intelligence he assembled fewer chairs. These things are a somewhat doleful parable. Yet in the finer forms of manufacture something might be done. If our most creditable decorative design of a commercial sort to-day is wrought-iron work and terra-cotta, it is because the designers in these branches habitually work in the actual material.

The lecturers before the Worshipful Company of Carpenters were especially anxious that reforms should begin with the architects, who were plainly regarded as the chief obstructors of sound design. One lecturer insisted that every architect should serve a brief apprenticeship in every art connected with building. Another suggested that by becoming moderately proficient in one craft the architect might obtain an insight into all. These observations, though based on British conditions, are possibly applicable here as well.

The desired reform might, of course, come, theoretically at least, either through making the designer work, or encouraging the worker to design. To the former course there are serious obstacles. Your designer is more or less of a superior person, an incipient artist in his own eyes, and little inclined to soil his fingers. Besides, if he wanted to work, in many cases he would have to reckon with the trade unions. As an ideal, a certain amount of instruction of workmen in the art of design seems more promising. Through night-classes and otherwrise some of the art schools already undertake this work; but, alas! too many of them practice the most attenuate forms of pattern-making *in vacuo*. In the so-called decorative trades, there is already a nucleus of workmen who can draw a pattern or work out a color scheme. Here might gradually reestablish itself the humane custom of apprenticeship. But here, too, the tyranny of the academic designer is heavy. Whenever workmen generally decide to humanize their routine task, they will probably take steps to put the finer crafts once more on an independent basis. This implies the reëstablishing of the craft traditions in a form compatible with modern life.

With "Famous Cathedrals as Seen and Described by Great Writers" (Dodd, Mead & Co.) Miss Esther Singleton falls but one short of the second dozen in this manner of compilation. Gautier, Hugo, de Amicis, are the most prominent European writers represented. In general, reliance is laid upon rather obvious English sources. Ruskin, oddly enough, is not drawn on, possibly because he is less concretely descriptive than, say, the patient Hare. Miss Singleton, presumably in the absence of suitable material, does Cologne and Laon herself. This sort of stitchery does not lend itself to criticism, but possibly what Goethe had to say about Strassburg might still afford a tit-bit, while Viollet-le-Duc, if only for piety's sake, should not have been ignored. Still for those who take their reading in capsules there are few more intelligent and amiable pharmacists than Miss Singleton.

We have received from the Field Museum of Natural History, Chicago, a "Catalogue of Bronzes, etc., Reproduced from Originals in the National Museum of Naples." This list comprises 300 numbers, with full archæological notes, by Prof. F. B. Tarbell and George A. Dorsey, curator of the department. It has numerous plates, and aside from its anthropological value, will be useful to students of applied design. Everything that is typical of the household utensils of Pompeii and its neighborhood is here included. The pamphlet is No. 130 of Museum publications, Vol. VIII, No. 3, of the anthropological series.

To The Art Galleries of Europe (Boston: L. C. Page & Co.) is added "The Art of the Belgian Galleries," by Esther Singleton. Like nearly all the work of that industrious writer, this is a careful compilation from approved sources. It affords a readable commentary for the tourist, and naturally betrays a few defects in scholarship. Having dug so deep among the minor painters, Miss Singleton should have mentioned that echo of Gerard David, Adrian Ysenbrant. She appears to be unaware that the elder Joos van Cleef and the "Master of the Death of the Virgin" are presumably one and the same person. The Latin legends quoted from Jan van Eyck's pictures lack the marks of contraction which make the text give sense. There are no Giottos at Antwerp. The lovely Madonna by Foucquet, which the Brussels gallery acquired a few years ago from the Huybrechts Collection, is not mentioned. This confirms a suspicion that the book is based not upon a recent personal visit but upon other books. There are forty-eight clear halftone cuts. With a somewhat more careful revision this well-constructed book might be made very useful. Its blemishes are in details of a relatively unimportant kind.

"Home Decoration," by Dorothy Tuke Priestman (The Penn Publishing Co.), will warn what it calls the "home maker" against the worst lapses in taste. It also gives many practical suggestions for those who must furnish with limited means. Especially commendable to us seems its championship of paint for furniture and woodwork. It is the cheapest harmonizer and one of the most satisfactory. That bad wall papers may be calcimined is news to us, but it seems a quick and inexpensive counsel of despair. We cannot join the author in urging the home maker to mould pots and stencil her own walls. It is only too true that "Those who have no knowledge of drawing may find some difficulty in making original designs." What is written on the complicated subject of hangings is sensible, but it is surprising to find no mention of the merits of kilims for *portières*. There are also useful hints for the utilization of small spaces in city houses and apartments, on rug weaving, on staining woodwork, and on elementary carpentry.

"Illuminated Manuscripts," by John Bradley, is the latest addition to the useful series of Little Books on Art (McClurg). Mr. Bradley has labored valiantly with the difficulties of his vast theme, and has assembled skilfully a great amount of literary and antiquarian information. This ballast of facts he carries lightly; the book is good reading. We notice certain rather disquieting faults of omission and disproportion. The supremacy of French illumination is fully admitted in the text, but this school is scamped as to space. The fine artist André Beauneveu, from whom we have not only miniatures but precious sketches, is not even mentioned in the text, though included in the list of MSS. A similar silence prevails as to the Hesdin school and the even more important problem of the so-called Limbourg illustrators. Mr. Bradley does not cite Durrieu's standard editions of the famous

Hours of the Duke of Berri, or yet the Eyckian miniatures at Turin, and is oblivious of the whole Franco-Flemish controversy in which the late M. Bouchot played so militant a part. These may be intentional omissions. If so, they are unfortunate ones. Into the crucial question whether the famous artists whose names are transmitted worked themselves on the vellum or merely furnished designs for artisan illuminators, Mr. Bradley does not enter. Italian titles in the bibliography are carelessly printed. Milanesi's Sienese "Documenti" is cited, but, oddly enough, not his little treatise on Italian Miniaturists. Ongania's facsimile of the Grimani Breviary should be mentioned as one of the cheapest and most accessible of color reproductions. By bringing the book up to date and adding further illustrations (there are twenty-one plates) it might be made over into a really excellent manual. Its defects are rather in minuter matters of scholarship than in judgment and taste.

C. Haldane McFall's chapters on "Beautiful Children Immortalized by the Masters" are more biographical of the painters than of the children painted; but they are written, if not exactly down to the child's level, yet in a simple and easy vein. The full-page colored plates reproduce fifty famous pictures of children and are well selected. The reproductions are generally good, though we notice occasionally the messiness that almost inevitably goes with this form of printing in its present state of development; and we are repelled at times by a falseness in the color, especially in some of the reds which tend to look dirty. (Dodd, Mead & Co.)

The Bates & Guild Co. publishes a monograph on "The Madonna," by Philip L. Hale, with a series of photographic reproductions of famous pictures.

To the tiny albums of the Great Galleries Series (H. M. Caldwell & Co.) is added the Wallace collection. There are forty-five clearly printed half-tone reproductions of the most famous pictures at Hertford House with succinct explanations at the foot of each plate.

The publication and sale of illustrated postal cards has reached such astounding proportions in Germany that in favored localities the business in cards alone is often equal, for a bookseller, to his trade in books. Publishers of *Prachtausgaben,* or elaborate editions of the poets and masters of the brush, for which there is no longer a paying demand, have discovered in the artistic postal a new use for their precious plates, and art of the highest type is thus distributed widely at moderate cost. Now a German investigator shows that the illustrated postal is nothing very new. This *Buchwurm* has discovered that the *Almanach de la petite Poste* made the following announcement in 1777:

Printed matter in the form of cards is now in circulation which may be sent through the post, and which contains open and visible communications. This novelty is the invention of the printer Demaison, and caused much comment.

The death of Henri de Morgan at Château d'Oriiénas (Rhône), in the fifty-fifth year of his age, is announced. He was a recognized archæologist and numismatist. In recent years he had made far-reaching examinations into the earlier history of upper Egypt.

Finance.

STOCK EXCHANGE AND THE OPENING OF CONGRESS.

On Monday, the Sixty-fifth Congress, whose deliberations during the recent extra session were restricted to the tariff bill, reconvened. It is an old tradition of the Stock Exchange that markets are likely to decline a bit when Congress assembles and to advance a bit when it adjourns. The tradition gained especial vogue in the eighties and the early nineties, when every one knew that chances favored introduction of a "silver bill," over which a stormy controversy, with resultant uneasiness in financial circles, would presently arise. In the older days, the heat of the debate would evoke such highly reassuring remarks as, "What do we care for 'abroad'?" or, "I am in favor of issuing paper currency enough to stuff down the bondholders until they are sick." It was little wonder that the opening of a session was a terrifying event to Wall Street.

The fact that questions of regulating railway and industrial corporations were bound to come up on the calendar of Congress, has been the main cause of misgiving on the eve of recent sessions. Naturally, feeling of this nature was particularly widespread during Mr. Roosevelt's Administration, when it was hard to say whether the terror professed by great corporations with a vulnerable side to law was inspired more by the prospect of new legislation, or by expectation of vigorous denunciation in the President's message. We have a President to-day with a less trenchant style of public speech. Nevertheless, that the same questions will play their part in the coming session is a certainty, and it is legitimate to ask how Wall Street will be influenced thereby. On Monday, when Congress assembled, prices on the Stock Exchange declined; on Tuesday they advanced, and nobody seemed able to say whether the reconvening of Congress had been an influence, or not. To what extent it will be an influence later on, depends in part on the character of the new Congress, in part on the President's attitude, and in part on the nature of the corporation situation itself.

Though elected only one year after a great financial panic, the present Congress does not represent an explosion of general discontent. If it did, then the Opposition party would be in the majority—which is not the case. On the other hand, even the tariff debate has shown the existence of a powerful faction in the dominating party, which is progressive in the sense of wishing to deal boldly with what it deems abuses. President Taft has already outlined his own purpose of suggesting legislation to control such railway financiering as made possible Union Pacific's Stock Exchange exploits under Mr. Harriman, and perhaps of outlining a proposed reconstruction of the Anti-Trust law of 1890.

There is left the question, whether the corporate interests do or do not need regulation and restriction of the sort proposed. If they do not, then Wall Street and the country at large would be warranted in misgiving over Congress. If they do, then not only everyday citizens, but the financial markets, should interest themselves in seeing the task promptly and judiciously performed.

The fundamentally important consideration, so far as regards the attitude of the Stock Exchange towards Washington, is that recent lawmaking has not been of a helter-skelter character, and has not been, like the numerous radical proposals of two or three decades ago in currency legislation, the outcome of sectional jealousy, hard times, and popular discontent. The laws restraining activities of corporations, debated in Congress during the past half-dozen years, have been drawn by men of thought and training. They have been subjected on the floor of Congress to thorough discussion, often on a very high plane, and have been carefully and liberally amended.

This removes one of the apprehensions which surrounded the opening of a new session, a generation ago. There still remains, however, the dislike of great corporations to being restrained or regulated at all, and the argument is familiar that values on the Stock Exchange are shaken because bills with that purpose have come up, or are about to come up, in Congress. On this point, there are two comments to be made. One is, that even Stock Exchange values have not declined of recent years because of Congressional legislation. Their general course, during the period of such activities, has been upward, and there have been occasions—the season after the Hepburn Railway Rate Law of 1906 was passed, for instance—when a violent rise in stocks has been the immediate sequel.

The other natural comment is, that the laws in restraint of corporations are in the main framed quite as much in the interest of investors as in the interest of the general public. The advantages of a monopolistic combination in restraint of trade are never equitably distributed. The men in control of such an enterprise will have their power increased, their tenure of office made permanent, and their private ends undoubtedly subserved. The army of shareholders may find their dividends increased, as in the Standard Oil Com-

Letters of Credit

Buy and sell bills of exchange and make cable transfers of money on all foreign points; also make collections, and issue Commercial and Travellers' Credits available in all parts of the world.

International Cheques. Certificates of Deposit.

BROWN BROTHERS & CO.
No. 59 Wall Street, New York

pany, or they may find them decreased, as in the Amalgamated Copper. Chances, so far as recent experience has taught, are fairly even. But, in proportion as monopoly grows complete and capitalization grows enormous, the shareholder certainly loses the power, by combination with his fellow-shareholders, to protect himself against incompetent management; and by no means all the new Trusts of the decade past have been competently managed.

Investment brokers occasionally complain of great mergers of corporations, and welcome their dissolution, on the ground that such combinations reduce the number of stocks that can be dealt in. This is an argument with somewhat larger scope than the simple dislike to curtailment of a broker's commissions. The more separate stocks the investor has to choose from, the better chance he will enjoy to separate the good from the bad. The greater the combination into which other corporations have been merged, the less chance for selection he will have, and the greater will be his difficulty in ascertaining the exact industrial outlook and investment promise of the enterprise. This is perhaps one reason why financial markets have not looked with particular dismay on conservative efforts of Congress, in the past few years, to regulate great corporations.

6% Irrigation Bonds

Secured by a Thousand Farms

The security back of Irrigation bonds is first liens on farm lands—sometimes a thousand farms.

These liens are given by individual land owners in payment for water rights. They are paid in annual installments. The land which secures them is generally worth four times the lien.

The trustee may hold a thousand such liens—given by a thousand farmers on a thousand separate farms—as security for the bonds as a whole.

The farms under lien are among the most fertile farms in America. And the perpetual water right, which the lien secures, multiplies the land's value. The first crop is usually more than sufficient to pay the whole lien.

The land is not subject to crop failures, because the farmer controls his water supply. The earnings are large and sure.

A bond issue based on a thousand such liens is, in our estimation, the safest sort of security.

Additional Security

Irrigation bonds are additionally secured by a first mortgage on all the property owned by the Irrigation Company. The investment in this property is often twice the bond issue.

Thus, in addition to the many farm liens, we have this corporation and all of its property pledged to the fulfillment of all obligations.

Some Irrigation bonds are issued, like School bonds, by organized districts. Such bonds form a tax lien on all the taxable property of the community.

Some Irrigation bonds are issued under the "Carey Act," where the State supervises the project.

73 Issues Sold

During the past 15 years we have sold 73 separate issues of Drainage and Irrigation bonds, all secured by farm liens. Every obligation under every bond has been promptly met.

These bonds have become, with most of our customers, the most popular bonds that we handle. Now, we have first pick of these projects, because of our dominant place in this field.

Our own engineers and attorneys investigate every feature. An officer of our Company constantly resides in the irrigated sections, watching the projects we finance. Thus, our customers secure only the very cream of Irrigation bonds.

Ideal Investments

Such Irrigation bonds as we handle are regarded as ideal investments. The security approaches the absolute.

They are serial bonds, running from two to twelve years, so one may obtain any desired maturity. The denominations are $100, $500 and $1,000, so one may invest either little or much.

The demand for irrigated land is so great, and the projects so profitable, that the bonds pay six per cent. That is a higher rate than can now be obtained on any large class of equal securities.

We have written a book on Irrigation bonds, based on our vast experience. Every investor, small or large, should read it. The book is free. Cut out this coupon, as a reminder to write for it.

January Investments

For January investors we have on hand 100 varieties of bonds. They include Municipal, Public Utility, Water Power, Corporation and Irrigation Bonds. Please ask for our list. Cut out this reminder so you won't forget.

My Life in China and America

By YUNG WING. With portrait, 273 pp. and index, 8vo. Probable price, $3.00 net.

This frank autobiography chronicles an unusual life. The author's account of his early life in China, his education at Yale, where he took two first prizes in English composition and graduated in 1854 (LL.D., 1876), his return to China and adventures during the Taiping rebellion, his intimate association with the great statesmen, Tsang Kwoh Fan and Li Hung Chang, and finally his great work for the "Chinese Educational Movement" furnish highly interesting and good reading.

Abraham Lincoln

The People's Leader in the Struggle for National Existence

By GEORGE HAVEN PUTNAM, Litt.D., author of "Books and Their Makers in the Middle Ages," etc. *With photogravure Portrait, $1.25 net (by mail, $1.40).*

With the above is included the speech delivered by Lincoln in New York, February 27th, 1860: with an introduction by Charles C. Nott, late Chief Justice of the Court of Claims, and annotations by Judge Nott and by Cephas Brainerd of the New York Bar.

The volume presents the main events in the career of the people's leader, together with an analysis of the Constitutional issues which were fought out during the years of Lincoln's life.

SHIRLEY'S POEMS. *FIRST EDITION*, with the rare portrait. 1646. Sm. 8vo., morocco ..... £24.

SHAKESPEARE. The Second Folio. 1632. Fine copy in morocco .....£180.

SHAKESPEARE. The rare Third Folio, with the extra Plays. 1664, red morocco.£420.

SHAKESPEARE. The Fourth Folio, with an unusual imprint. 1685, original calf (rebacked) .....£145.

SPENSER'S FAERIE QUEEN, and other Works. 1611. Folio, morocco £10.10

TURBERVILLE'S BOOKE OF FALCONRIE, AND NOBLE ART OF VENERIE. In 1 vol. Sm. 4to., 1611, morocco.... £25.

TURNER'S HERBALL; COVERDALE'S HOMISH APOTHECARYE; AND THE GRETE HERBALL. 1551-62. 4 vols in 1, folio, Black Letter, a beautiful copy in contemporary stamped calf ..... £66.

VIRGIL'S ENEADOS, translated by Gawin Douglas. 1553. Sm. 4to., *FIRST EDITION*, Black Letter; Bishop Burnet's & Horace Walpole's copy, with their bookplates, calf ..... £60.

WITHER'S EMBLEMES. 1635. Folio, *FIRST EDITION*, with frontispiece, portrait, and engravings, russia ..... £21.

Cablegrams respecting any of these volumes will receive immediate attention.

The Only Up-to-Date Book on Polar Discoveries

HAND-BOOK OF Polar Discoveries

By GEN. A. W. GREELY

Of the United States Army

This authoritative résumé of polar explorations from the earliest voyages has been thoroughly revised, and includes the latest discoveries by Peary, Cook, and Shackleton. Written by one who has himself attained distinction as an explorer in the Far North, this handbook has long been the standard work on the subject. In this new edition there has been added an excellent colored map of the Arctic regions that gives accurate information, and there are new chapters on "The Conquest of the North Pole" and "The South Polar Quest." Gen. Greely considers dispassionately the claims of Peary and Cook.

336 pages, with Maps and full bibliography. Cloth. Price $1.50 net; postpaid, $1.62.

LITTLE, BROWN & CO., BOSTON

Mr. Sherman's Publications

Songs and Sonnets
By Elizabeth Colwell

Hand-lettered by the author. 250 signed and numbered copies. 8vo. $2.50 net; postpaid $2.60.

Verses that are full of the joyousness of youth, the music of love, and the dignity of life. Every piece is marked with some touch of distinction that warrants its preservation.

When Yesterday Was Young
By Mildred I. McNeal-Sweeney

12mo, $1.00 net; postpaid $1.08.

"In her work reside a fineness, a lightness of soul, and a rare exquisiteness of touch that put didacticism to shame."
—*Boston Transcript.*

Simeon Solomon, An Appreciation
By Julia Ellsworth Fard

Illustrated in tint, 4to, $3.50 net; postpaid $3.70.

"A beautifully printed book—as the imprint guarantees.' —*New York Sun.*

The Literary Miscellany
An Illustrated Quarterly for Book-Lovers and Collectors

"A very attractive little visitor."
—*Bliss Carman.*

Fifty cents for the four issues for 1910. $1.00 for the Issues of 1909 and the numbers for 1910. No single copies sold and subscriptions taken, direct only, by the publisher.

Catalogue of First Editions and Rare Books just ready and sent upon request.

The Review of Reviews

Is impartial; it neither muck-rakes nor slides facts. Dr. Shaw's editorial, "Progress of the World," opens the magazine with thirty splendidly illustrated pages that give the reader a clear, finely interpreted account of the men and events of the month. Reviews of the best articles in the other magazines of the world are so comprehensively done that they have given the Review of Reviews fame all over the world. Each month the Review produces the most graphic, clever and striking cartoons that have appeared in American and foreign papers.

The Nation

20 Vesey St., New York City

The Nation.

NEW YORK, THURSDAY, DECEMBER 16, 1909.

The Week.

Secretary MacVeagh was certain to be attacked by the straiter—not excluding the crookeder—sect of Republicans, and rumors of the coming fray are already heard in Washington. The Secretary's low-tariff speech at Boston is his latest offence. Just fancy having a man in a Republican Cabinet who does not believe that the Payne tariff is a blessed finality! This is sad enough, but Mr. MacVeagh goes from bad tariff doctrine to worse principles of administration. Senators grow purple with rage as they say to each other: "Why, the man is trying to run the Treasury just as if it were a first-class business house!" He is making his own appointments, and making them, what is more, on the ground of efficiency, and with cool disregard of the politicians. The grossest outrage of which he has been guilty consists in selecting an Assistant Secretary who comes from Boston, and in neither consulting nor notifying the Massachusetts Senators. This is almost enough to make Lodge lose faith in republican institutions—of which, naturally, he reckons his discredited State machine a necessary part. We presume that the fight on Secretary MacVeagh will not be so open or ferocious as some of the Washington correspondents are predicting, but the mere threat of it shows what a red rag to the standpatters is any programme of reform.

Not long ago, an Ohio Democratic committeeman wailed in this city over the lost opportunities of Gov. Harmon. With Republicans still in appointive offices all over the State, and hungry politicians of his own party unfed, what hope could there be for Democrats in the elections of next year, or what chance that he could control the delegation of Ohio in the next national convention? But the people of Ohio have just found out how their Governor has been using his time. The grafters who have been filling their purses and paying political debts through the manipulation of State funds have discovered in Gov. Harmon an official whom they can neither deceive nor frighten. He now has in his office safe incriminating documents which legislative committees had been powerless to unearth, showing the loan of State funds carried on the books as in the vaults of the treasurer's office, the payment of private commissions to officials purchasing supplies for the State, and other frauds upon the people. No Ohio Republican with a reputation to preserve is any longer scoffing at the demand for a complete exposure of recent Republican Administrations. To carry the State against Gov. Harmon in 1910 would be no easy task under the best circumstances, but to go into the campaign under the burden either of a denial of the frauds which he has established, or of an attempt to impede further disclosures, would mean the sure sacrifice of Republican hopes in Ohio for years to come.

Attorney-General Wickersham's speech at the Pennsylvania Society's dinner, in New York Saturday night, contained this interesting passage:

> As the statutes of the United States vest in him complete control over all such prosecution, he is constantly importuned to interfere with indictments or prosecutions, particularly in cases where proceedings are brought or threatened against persons of high social standing or of conspicuous political or business position. That the prosecution of crime cannot be properly influenced by considerations of the wealth or position of the offender is of course, axiomatic.

Mr. Wickersham's reference to the requests to keep his hands off, because of the social or political position of the parties concerned, piques curiosity. Which Trust has indulged in "importunity" on this broad ground? The Attorney-General may have had the Sugar Trust in mind; or he may have been dropping a quiet hint to certain other projected combinations of which the plans were awkwardly upset by last month's Circuit Court decision, and which may have been fishing for assurances of immunity from interference, if they go ahead with their undertakings. To describe the argument for ignoring such appeals as "axiomatic" is to put the case, from the Department's point of view, about as plainly as could be done. It means that there are no arguments on the other side to which intelligent men will listen.

Last Friday's estimate on the cotton crop of 1909 by the Department of Agriculture was a somewhat startling surprise. The figure reported, 10,088,000 bales, was virtually down to the level of the crop of 1903, which was itself inadequate for the spinning trade's needs of that period—this in face of the fact that the estimated "world's annual requirements" of American cotton are to-day nearly 2,000,000 bales larger than in 1903. Not only was this estimate lower by half a million to a million bales than had been generally expected, but it was a quarter of a million bales below the personal estimates previously given out by the leaders in the cotton market's "bull speculation," who had every motive to spread belief in the lowest possible figure. But hardly less surprising than the estimate itself was the cotton market's reception of it. When the estimate appeared, cotton had been selling close to 15 cents a pound, and speculators had been excitedly predicting 17 to 20 cents. But instead of rushing up sensationally on the news, the cotton market, after a brief advance on Friday, actually declined next day. This could hardly be interpreted except as meaning, first, that the abnormally high existing price had "discounted" very much in the way of low estimates, and, secondly, that the Government's figures were distrusted.

There is some reason for distrusting them—quite apart from the fact that they fall so far below virtually every other forecast. For one thing, the Agricultural Department almost invariably underestimates a cotton crop, and its errors have of late years been very large. Its estimate of last December ran a million bales below the subsequently ascertained crop; in 1906 it was also a million bales below the facts; in 1904, a million and a half; in 1901, a million. In 1907 and 1903 its guess was fairly accurate, but those were conspicuous exceptions. In the present instance, there is reason to look skeptically at the Government figures on other grounds, particularly because of the small yield which it allots to cot-

ton States on the Atlantic seaboard, where the damaging weather influences which impaired the crop of the Gulf States and the Mississippi Valley did not prevail at all. That the crop as a whole is actually short, nobody doubts; and the state of the cotton trade is difficult enough without any over-emphasizing of gloomy calculations. Had the stock of cotton on hand at the opening of the season been so low as it was in 1903, and had foreign producers, such as Egypt and India, done as poorly this year as then, conditions would be disastrous. Fortunately, supplies of old cotton were this year nearly a million bales above those of 1903, and foreign crops appear to have turned out exceptionally well.

James J. Hill's continued warnings about our failing food supply are really a plea for scientific farming. Intensive culture and the utilization of every ounce of energy stored up in food, must make up for the increasing pressure of population and the diminishing areas of cheap and unoccupied land. This subject was touched upon in the presidential address delivered before the Society of Animal Nutrition at Chicago last month, and just printed in the last number of *Science*. A strong point was made of closer attention to what may be called the by-products of the farm. Just as the miner seeks to work low-grade ore, so will the farmer of the future endeavor to prevent the waste of "available energy contained in oat hulls, corn cobs, and the like." It is somewhat anomalous to have such minor savings urged upon us at the very time when, as the President assures us, the country is in a "high state of prosperity." But the true moral is that upon which Mr. Hill insists, namely, that no prosperity can long endure which depends upon exhausting the soil and ignoring the applications of science to agriculture.

It has for years been the rule in the event of a crime in certain portions of the South, to arrest the nearest negroes, and examine them afterward, if they are not previously lynched. But we do not recall, outside of Russia or Turkey, any happening similar to that in Savannah, where two hundred negroes have been rounded up and placed in jail merely on suspicion that they might be connected with the killing of two white women and with the mortal injury to a third. The injured woman lived long enough to accuse her own husband of the crime and the evidence against him is multiplying. This, we must say, leaves the Savannah officers of the law in a singularly unfortunate position. If colored persons had in the courts there the standing to which they are entitled, there would be many suits for illegal arrest and imprisonment of innocent persons. But being only "niggers," the injured know full well that this redress is denied them; they can take satisfaction only in the fact that they are still unlynched and that the superior race is itself indicted.

The necessity of a law making it a criminal offence, subject to heavy penalty, for the driver of an automobile to run away after knocking down a human being is once more brought out by a distressing occurrence, when a faithful trolley switchman, who had been in the employ of the Brooklyn company for thirty-five years, was killed at his post of duty. The chauffeurs, fortunately in this case, and thanks to the energy of the police force, have been caught; and their explanation, so far as the running away is concerned, is that they were too frightened to stop. That is just where a proper law in the case would come in; it would make them too frightened to run away. It should provide a punishment of a long term of imprisonment for that act taken in itself, and irrespective of the seriousness of the injury inflicted on the victim. Then there would be some hope that what common decency does not effect would be accomplished by fear of consequences. Of course, this is not all that needs to be done. Real punishment for violation of the speed laws is imperatively demanded; and there must be more effective regulations to enable people to identify swiftly-moving automobiles, especially at night.

Cornell's ultimatum to the football magnates that the game must be reformed or abolished, coming as it does on top of a similar decision by the twelve Eastern Jesuit colleges, must send cold shivers down their spines. Never before has the opposition to the game been so earnest, so determined. The old absurd theories that this is not a matter for faculties and presidents to meddle with; that a college could not afford to do away with football for fear of driving its students elsewhere; that the risks of football enhance its value and are inseparable from any manly sport, have entirely lost their utility in misleading the public. Cornell, like the rest of the university world, has seen Columbia flourish without football. Its faculty is, moreover, wise enough to see that, bad as the evils on the playing fields are, they are no worse than the physical and mental idleness among the students who look on, and the false standards of what is really worth while set up among the undergraduates. The Jesuit colleges have at last found their voices to denounce the recruiting of students expressly for athletic purposes, and the other evils of professionalism. They could have pointed them out years ago. But we who have so long called for this uprising against football would not now lament the delay. We must, however, point out that what we are really witnessing is the long-desired awakening, not so much of the public as of the collegiate governing bodies.

It is gratifying to find that in the Nobel prize distribution for 1909, the names of people well-off in worldly goods are not over-plenty. William Marconi, who gets half the physics prize, could probably get along without the twenty thousand dollars, and the Baron d'Estournelles de Constant, who receives, and deservedly receives, the peace prize, is described as fond of yachting and automobiling. The other beneficiaries are two German professors, a Swiss professor, and a Swedish authoress, none of whom is apt to be rolling in wealth even when the persons in question are of such international repute as Wilhelm Ostwald, or of such wide European fame as Selma Lagerlöt. The latter is the third woman to receive the Nobel prize since its foundation. Bertha von Suttner won the peace prize a few years ago, with her anti-militarist novel, and Mme. Curie shared the annual physics prize with her husband and Professor Becquerel. To Selma Lagerlöf, who is known in this country by a volume or two of short stories, the prize for idealism in literature goes more appropriately, perhaps, than to some of the men of far greater reputation upon

whom it has been bestowed, Kipling or Sienklewicz, for instance. Her studies of peasant life in her own country have the glow of patriotism and piety which seems essential to give a writer national rank.

By the will of the late Francis Lathrop, the Metropolitan Museum gains conditionally a new department. His Japanese prints and wood-block books were collected long before the present rise in prices, but he never hesitated to replace a fair by a better example, nor to pay lavishly to fill a gap. This artist-collector combined, as few amateurs of our time, studious habits with instinctive taste. Thus his collections, in whatever field—Italian painting, Moorish pottery, or objects of Far Eastern art—were finely selected and contain a minimum of dross. A man of retiring disposition and averse from all forms of display and self-advertisement, the richness of his accumulations will doubtless surprise even his associates. The bequest to the Metropolitan is made subject to certain annulties, which, one may estimate, would be more than covered by the annual appreciation of the value of the collections. Mr. Lathrop also set a good example by leaving a collection which well deserved separate exhibition absolutely at the disposal of the Museum authorities. But here his diligence will frustrate his modesty, for as long as students seek Japanese books and prints at the Metropolitan Museum they will speak of the Lathrop collection.

Mr. Asquith's Albert Hall speech is a ringing manifesto of the Liberal Party's rights and purposes. It does not err on the ground of timidity. It does not hesitate, for instance, to come out strongly for self-government for Ireland. It disclaims any intention to do away with the House of Lords, but makes it very plain that its survival is to be conditioned on repentance and good behavior. The supremacy of the Commons is no longer to be left to the uncertainties of custom and precedent, but will be written down in black and white into an act of Parliament. The Liberal Premier's speech contains the ready answer to Mr. Balfour's argument that such action as the Lords have taken on the budget is the nation's only resource against the tyrannies of an unbridled Lower House. Mr. Asquith asks that the life of a single Parliament be restricted to five or even four years. A House of Commons that runs wildly counter to the will of the people can thus be brought to speedy account. It remains for the Liberal orators to drive home the point Mr. Asquith insisted on Monday night, that under present circumstances no Liberal Minister can assume the burdens of government without assurance that his labors will not be nullified by the Lords.

There is a beautifully mathematical simplicity that is almost un-English about the first forecasts of the kind of tariff the British Unionist party will enact, if it is successful in next month's elections. All imports not regarded as raw materials will be moderately taxed—a 5 per cent. duty on partly manufactured goods, a 10 per cent. duty on goods in a more advanced stage of completion, a 15 per cent. duty on completely manufactured goods. Now we come to specific instances. Foreign wheat will pay a duty of two shillings a quarter or about six cents a bushel; from which we gather that wheat under the new tariff dispensation will take on the nature of a partly manufactured commodity. Other imports, partly or completely manufactured, that will pay duty, are flour, bacon, and maize. Inasmuch as, under the present system, tea, coffee, sugar, tobacco, dried fruits, and wine already pay a tax, it is quite apparent how tariff reform is going to put more bread and meat into the mouth of the British workingman. The way of all tariffs is uniform. They set out to create a dozen blessings and do away with a dozen evils, and their end is always that the daily pursuit of bread and meat and clothes for the masses of the people grows arduous to the point where the cry for relief can no longer be stilled—as in "protected" Germany, or in "protected" America.

The first speech of the new German Chancellor in the Reichstag bore out the indications of his policy that he had privately intimated. Herr Bethmann-Hollweg announced that he would not attempt government by party—meaning, of course, groups of parties. He declared that the Empire needed steady and consistent policies which would be impossible if the Government had all the while to be making arrangements with shifting parties in order to get its measures adopted. This must not be taken as too serious an assertion of absolutism on the part of the Kaiser and his Ministers. It is, indeed, a definite turning away from the *bloc* strategy of Von Bülow, but the practical question remains, "How is the Government to get its majority in the Reichstag?" We are not speaking now of a vote of confidence or of a responsible Ministry—both as yet out of the question in Germany—but of obtaining supplies. Neither its taxation nor other schemes can the Government carry without somehow rallying a majority of the Deputies; and when the time comes to do it, we shall probably find the new Chancellor forced to adopt the party bargaining from which not even Bismarck could escape.

The latest step in the Russian Government's campaign against Finland is the appointment of the Grand Duke Nicholas, one of the firmest pillars of Russian reaction, to the supreme control over affairs in that land. Under him will be the governor-general and the crowd of military officials whom the Czar's Government has foisted upon the people of the Grand-Duchy precisely as in Von Plehve's day six years ago. The conflict has been raging for some time, and the Finns have shown their usual courage and resourcefulness. Their diets have been dissolved three times in four years; their Senates have resigned rather than play into the hands of Russia, and it may even be that in the last resort the people will venture to try their strength against the Cossacks. At the same time, the Government at St. Petersburg, flushed by its success in stifling a revolution and taming a Parliament, is pretty sure to go to extremes. The right of the Czar's Cabinet to legislate on matters of common interest to Russia and Finland is now to be extended so as to include not only the army, posts and railways, and customs, but the maintenance of public order, the regulation of judicial procedure, and all legislation affecting the rights of association, freedom of the press, and public meeting. Russian "order" and "freedom of speech" for Finland would mean the extinction of the last spark of liberty in the Czar's domains.

WORKING UP PATRIOTISM.

The American people, said Senator Rayner in his speech in the Senate last Monday, "have not yet fully absorbed the significance" of the Nicaraguan imbroglio. But they are in a fair way to do so. The very proposals of the Maryland Senator will enlighten them. When Representative Sulzer rose in the House to demand that President Taft "arrest" President Zelaya and try him for murder, most people only laughed. That was merely one of the amusing ways of the "peepul's" William. But Senator Rayner is a real lawyer, with a reputation to sustain. Yet he commits himself to doctrines and policies fully as wild as Sulzer's. He would have Congress authorize and virtually direct President Taft to "take all necessary steps for the apprehension" of Zelaya, and to "bring him to trial" for the murder of two American citizens. And this is put forward in the name of the well-settled principles of justice and the established canons of international law!

We cannot pretend to answer the question how a man of Senator Rayner's standing can tie himself up to such amazing doctrines. The most charitable supposition is that much learning about Zelaya's outrages hath made him mad. Mr. Rayner has made himself known as a man of warm humane sympathies. His arraignment of Zelaya sounds like an expression of sincere indignation. And it may be granted that the Nicaraguan dictator can scarcely be painted in colors too black. From all the evidence available, he seems indeed to have run a career of unspeakable oppression and cruelty. But even if we concede his lawlessness and villany to be worse than King Bomba's, the fact remains that he is a foreigner entirely outside the criminal jurisdiction of the United States, and, moreover, is the *de facto* chief of state of a neighboring and friendly republic. To punish his disregard of law, are we ourselves going to fling legal procedure to the winds? To show our detestation of his flouting of the rights of our citizens under international law, are we to deny that he and his country have rights under the law of nations? Senator Rayner promised to produce later the precedents for the absurd course which he advocates—war on Nicaragua which is yet not to be war. We shall await his precedents with curiosity, but fear that the fundamental conception underlying them will be found to be that the people and government of Nicaragua have no rights which we are bound to respect.

What is most disquieting and even alarming about all this is the evidence it yields that an attempt is to be made to work Americans into a "patriotic" frenzy over Nicaragua. They are told that they have not yet perceived the full "significance" of the affair. So we have an agitation stirred up in Congress and the press. The aim seems to be so to inflame public sentiment that unwise and extreme and illegal measures may be condoned if not demanded. Thus far, the country has not been excited about the matter. The general opinion has not yet gone beyond believing that Zelaya is a great criminal, that conditions in Nicaragua are deplorable, and that our Government ought to see that the rights of Americans in that country are upheld. But we see what happens when a thing of this kind is let loose with clamorous publicity. The State Department does well to take a firm stand for what it believes to be the due protection of Americans abroad, but when its vigorous language is at once given to the press, along with its denunciations of a foreign ruler, a flame is kindled which may easily grow into a conflagration. Irresponsible politicians instantly throw on fresh fuel; and sensational newspapers try to flog the people into hysteria. No prudent statesman will fail to reckon with this new danger of American inflammability. It was comparatively safe in Webster's day to send and publish a dispatch, as he did in the Koszta case, in which, as he complacently wrote to a friend, he "let the eagle scream" a little; but there has been an enormous change since then. We have had the war about Cuba, for one thing, brought on by methods of political chicane and newspaper excitement undreamed of by Webster. And this is what so alarms the people of South and Central America, as we see their concern reflected in dispatches to foreign newspapers. It is none of Senator Rayner's "precedents" that they dread, but the precedent of the Spanish war, when Americans were gradually and artfully whipped into a delirium. A repetition of that mania is what some are to-day trying to force upon us

We are told that it is a patriotic duty to fall into a passion over the outrages in Nicaragua, and to resolve to go down there and "clean things up." Well, we also believe in patriotic fervor, but we would have it directed to the true objects of national pride. We have no objection to people getting excited in demanding of the Administration that it shall *not* get so excited as to lose its head and do an act of folly and injustice. Let there be as flaming a zeal as you please, but let it be a zeal for the real national dignity and for international fair dealing. Let the public be heated in calling upon the Government to keep cool. We do not yet know all the facts. Until we do, we cannot decide what law or policy we ought to apply to them. Under these circumstances, the truest patriot is he who will burn with indignation at the suggestion that the nation should do a reckless and illegal thing in the name of patriotism.

FREE TRADE AND BRITISH SHIPPING.

Those advocates of ship subsidies who are fond of asserting, in a conveniently broad and general way, that the great shipping business of Great Britain is maintained by a system of subsidies might profit by a discussion which appears in a Liverpool paper. The discussion turns on the probable effect of the protectionist proposals known by the name of "tariff reform" upon the prosperity of the shipping business; and the case is stated chiefly in the words of Mr. Charles Booth, chairman of the Liverpool Steamship Owners' Association, himself one of the leading shipowners of Liverpool and a recognized authority on the whole subject. As Mr. Booth's statement was certainly not intended for American consumption, it is interesting to observe that there is only a single passing reference—and that in a few words—to the subject of subsidies. From this fact alone it might be inferred that British shipping prosperity does not, as a rule, rest in any way upon the support of Government gratuities; but when it is seen what the reference is, a stronger inference may be made. This is the passage in which it occurs:

> Tariff reform would increase the cost of building, equipment, and repairs; it would swell working expenses; it would diminish cargoes both out and home; and it would

reduce freights. The cumulative effect of the increased charges and expenses on the one side, and of diminished earnings on the other, would be simply disastrous. Shipowners generally admit this. Those who support tariff reform as a policy hope to profit by a system of bounties.

Nobody would thus incidentally speak of people "hoping to profit by a system of bounties," if a system of bounties were already in operation in the business he was talking about, and of which he is one of the leading representatives. Many persons will find this little side-remark more convincing than elaborate citations of statistics.

The note of the whole discussion is the crucial importance of the advantages that free trade has given to the British shipping business. All that Mr. Booth and his associates in that great interest in Liverpool ask for is a continuance of free access to the best opportunities that the world affords. The best ships, bought at the lowest prices—that is the explanation, according to Mr. Booth, of the ability of British shipowners to keep a preponderant share of the world's carrying trade. "We build," says Mr. Booth, "the cheapest ships in the world. Even Germany, with considerably cheaper labor, cannot beat us here. The difference in first cost between a ship built in Great Britain and a ship of similar tonnage, material, and equipment built in the United States is anything from 30 to 60 per cent. The importance of this advantage can hardly be exaggerated." The competitor, he points out, who has to bear the burden of an unnecessarily expensive ship, is handicapped not only by the greater amount consequently required to pay interest on the capital, but also by a proportional increase in the allowance that must be made for depreciation and in insurance charges. The failure of American efforts to revive shipbuilding and shipowning for the foreign carrying trade he ascribes to our protectionist policy; while Germany's phenomenal advance in the same line, in spite of her general protectionist system, is explained by the fact that an exemption from the burden of that system has been made in favor both of shipbuilders and shipowners, who have been enjoying all the benefits of free trade.

Another tender spot in the protectionist system in this country is incidentally touched by Mr. Booth, when he says that the difference in the cost of ships in the United States is greatly increased by the practice of "the Steel Trust and other suppliers of material for shipbuilding of selling dear at home and cheap abroad." He does not at all relish the prospect of this charming device being introduced into England, as it might be if the Chamberlainite proposals were adopted. Evidently there is still a good deal of toughness in the English hold on free-trade principles, and it will take some work yet to loosen their grip on the minds of men of the Booth stamp. To hold your own against competitors by being able to deliver the goods at a lower price and still make a reasonable profit—that is the genuinely British way of looking at the matter. To hold your own against competitors by ruling them out at home and making an exorbitant profit, and underselling them abroad by giving foreigners better terms than your own countrymen—that is the modern protectionist idea. Before the people of the United States will add on to this scheme the additional feature of direct bounties out of the national treasury, they will wish to know a thing or two. And among other things, they will probably wish to know whether it wouldn't be well to try the plan of simply giving our shipowners a chance to get their ships at a fair price, before entering on a subsidy policy which is sure to bring with it demoralizing consequences.

MORE NEWS FROM THE POLE.

Whatever may be the case as regards history in general, no one can deny that in the *affaire Cook* history is repeating itself with a rapidity and exactness that leave nothing to be desired. One improbability doth tread upon another's heel, so fast they follow. Moreover, they keep coming in pairs, so prettily matched that, like the spellings of Tony Weller's name, a choice between them is left to the taste and fancy of each individual. The first story of Cook's conquest of the Pole was improbable; but what could have been pronounced more improbable in advance than that a great university should incontinently confer upon him a doctorate for the achievement unless ample proof had been presented? The episode of the Eskimo youths presented just such opposite improbabilities; and so did the Barrill affair. And now come an able seaman and his business-man friend, and make affidavit that they supplied the doctor with a complete set of "faked" observations covering his dash to the Pole. The affidavits are so circumstantial that it is difficult to doubt their truthfulness; but why did Cook fail to pay them their price, when the betrayal of the secret was sure to follow? There is more in all this than is natural. Even the very names involved in the Cook affair are so strange as to seem to belong to the world of fiction rather than of fact. Not content with Wake and Wack, he must consort with Dunkle and Loose, regardless of the suggestion of ways that are dark and tricks that are vain which the conjuncture can hardly fail to provoke.

But with the plot thickening as it now is, and a conclusion likely in the near future, it is hardly worth while to weigh too solemnly this particular addition to the evidence in the Cook case. On the face of it, the matter looks very bad for the doctor, and it seems almost a duty of charity to point out a way of escape for him if the net tightens. If worse comes to worst, and it should be proved beyond the possibility of doubt, by the identity of the Copenhagen figures with those of Dunkle and Loose, that the records have been doctored and cooked, there is still a way out which may not occur to the Brooklyn man's champions. There is eminent psychological authority for the view that to be found out in a cheat of this kind should not be regarded by the eye of science as seriously damaging; that, indeed, it may, under certain circumstances, be looked upon as evidence of general honesty. Cook, let us suppose, is a perfectly honest and exceptionally guileless man. He has reached the Pole; he knows it himself beyond a doubt, and he is pained to find himself in a difficult position owing to the perverse skepticism of an unkindly generation. This difficulty, he feels, cannot be removed by the presentation of his genuine observations, which, though good enough for all practical purposes, will be picked to pieces by cold-hearted scientists because he is not enough of a nautical expert to have made them with the requisite accuracy. What more natural than that he should accept the aid of a kind navigator who will give him a better set of observations? He doesn't want them for the purpose of deceiving anybody, but simply in order to establish what he knows to be the truth. And

the very fact that he is not afraid to do all this in the dark, and thus run the risk of the most cruel accusations of fraud, only brings out the simplicity of his nature.

The story told by the two worthies has a great deal of interest, quite aside from its evidential bearing on the North Pole question. Here is a bit of conversation between Dr. Cook and Captain Loose:

> "Do you think you could help me work out those altitudes?"
>
> "Of course I could," replied the captain.
>
> "How could you do it?" asked Dr. Cook.
>
> "Why, that's easy," said the captain. "I'll work them out backwards."
>
> Dr. Cook asked if he really knew how to work out observations backwards . . . and Capt. Loose assured him that he most certainly could.
>
> "Then," replied Dr. Cook, "you can be of some service to me."

This is Silas Wegg and Mr. Boffin over again, with the same wonder on the part of the patron at the mysterious power of his helper to "work them out backwards" as Mr. Boffin felt at Mr. Wegg's attainments when he found that "all print was open to him." And the business man is as notable in his own way as the sailor man in his. When Dunkle named the price at $4,000, and Dr. Cook "gasped some," Dunkle showed true American quickness and humor: "I assured him," he says, "that we thought we had the market cornered," a remark which must have struck the doctor as eminently correct. An interesting feature, too, is the sublime self-confidence of Loose, real or assumed. "Dr. Cook," he says, "you know that the observations which you had wouldn't prove anything to anybody. But if you stick to this set, they will carry you through any university in the world. Don't you be afraid that they will not pass those scientists at Copenhagen." Apparently, it did not occur to either of the parties that the Danish scientists might know as well as the captain did that observations could be fabricated without any trouble. Finally, it is interesting to notice the delicacy of the language employed on both sides throughout. Never was there anything more than an implication that the observations of Dr. Cook himself might be non-existent or worthless. Some of the high officials in charge of our relations with foreign countries might take pattern by these unprofessional diplomats in the observance of euphemistic forms to cover unpleasant realities.

HARVARD AND THE ELECTIVE SYSTEM.

The action taken by the Board of Overseers of Harvard University in relation to the elective system furnishes impressive evidence both of the ripeness of the time for the contemplated changes and of the firm grasp with which President Lowell has taken hold of his new duties. It is in response to a sentiment that has been steadily growing for some years, and which is now predominant in educational circles, that a radical modification of the system is being made at Harvard; but that action so definite and thoroughgoing should be taken so soon after the inauguration of the new president is a remarkable testimony to the effectiveness of his personal influence. As for the significance of the step in itself, it is within bounds to characterize it as among the most important events that have come about in the college world for many years, and one which will rejoice the hearts of nearly all who have given serious thought to that "problem of the college" of which we hear so much nowadays. It means much to thousands of individual young men whose choice of studies it will directly affect; it means more as an assertion of the attitude of the foremost of American colleges toward the underlying questions of college education.

In saying this, we do not wish to be understood as subscribing to some of those extreme forms which attack upon the idea of the Harvard elective system has taken. Thus a professor in the Columbia School of Law, in an article just printed in the *Columbia University Quarterly*, says: "It was upon the misconception that education meant an accumulation in the student's mind of a heterogeneous mass of undigested facts and of disassociated ideas that the very liberal elective system in colleges was based." This is so far from being true that it is almost the opposite of the truth. When a reaction takes place against a system which was at first hailed with enthusiastic applause and which has been tried and found wanting, it is curious how ready people are to call the men of the preceding generation nothing better than fools. The accumulation of a "mass of facts," heterogeneous or homogeneous, was the very thing that President Eliot and his associates in the movement cared least for; and it was an undervaluation, not an overvaluation, of such accumulation, that formed part of their motive in throwing overboard the old curriculum. What they wished to accomplish was to put life into the student's interest in his studies by giving him freedom of choice; what they aimed at was reality and significance in college studies, in direct contrast to the meaningless accumulation which they felt that the old curriculum represented in the case of a large proportion of the students. Their error was not in seeking something that was not worth while; it was that, in a too close concentration of their thoughts upon a single desideratum, they lost sight of other aspects of the question of education which are even more important, and the neglect of which is now recognized as having disastrous consequences. Their hobby was not a bad thing in itself; but they rode it too hard, as many have thought all along, and as almost everybody sees now.

The system that is to be substituted for the complete freedom of choice that has hitherto prevailed at Harvard is indicated with sufficient definiteness by the resolutions of the Overseers. A committee of the faculty is to be appointed, with the president as chairman, to "prepare general rules for the choice of electives, to be approved by the faculty, based upon the principle that a student must take a considerable amount of work in some one field and that the rest of his courses must be well distributed." This is the kernel of the whole matter; all the rest is subsidiary, including the provision for the appointment, out of the faculty, of "a large number of advisers for the students." It may safely be assumed that the details of the plan will be worked out by the committee in a practical manner.

The purpose is plain enough. The choice of a college course may be made sufficiently elastic to give due consideration to a student's proclivities and to his prospective occupation, without the sacrifice of the primary idea of a college education; but that idea is completely lost sight of when mere number of hours in the classroom is regarded, as it has been, as a full measure of value. Even supposing that the choice was made in good faith in every instance, there are a score of fundamental objections. The want of coördination is of itself an almost fatal defect, but there

are others fully as serious. Most fallacious of all is the notion that one study contributes as much as another to that general development of the mind which must be the primary aim of any college education worthy of the name. And when it comes to the objections that are not inherent but which experience shows to be of the utmost practical importance, we are confronted with the fact that in thousands of cases studies are chosen with no other measure of their attractiveness than that furnished by their standing in the scale of "soft snaps." All this the Harvard authorities are preparing to do away with; and to substitute for it something approaching the coherence and balance of the old college course, which, whatever its faults, was successful in building up, generation after generation, men who justly bore the title of gentleman and scholar.

THE GAY SCIENCE OF PHILOLOGY.

Philologists pass for dull dogs. Deeply immersed in severe studies, they preach and are supposed to practise a scientific method of inhuman exactitude. Many of them admit this, and the solemn occasions on which they convene are frequently enlivened by discussion whether, for the good of the feeble-minded greater number, philology ought not really to loosen up. But it can easily be shown that, far from being the most precise of the sciences, philology is, in actual practice, one of the most romantic of the arts. These grave men are inwardly fond adventurers and their trade as hazardous as the quest of samphire.

Only consider the interpretation of that charming Middle English poem, "The Pearl," which Professor Gollancz first rescued from the files of the Early English Text Society. Five translations and commentaries have ensued. Now, the especial point about this very pretty poem is that it either is or isn't that quite slippery thing, an allegory. It appears to be a lament for a little girl who is dead, whose purity is symbolized by the pearl. It is certain, that is, that the pearl means the girl, and it may well be that both, after approved mediæval fashion, mean something else. Hard words have passed on this issue, and in more robust days blood would doubtless have been shed. Where the fun really comes in is not in the rightness or wrongness of the partisans, but in the fact that half a dozen scholars of repute, professing to translate this poem for us laymen, have so garbled the meaning as to prove that the pearl was a real girl. Professor Schofield of Harvard, who is of the other opinion, has relentlessly shown them up in the vivacious periodical published by the Modern Language Association. One of them had inferred from the reality of the bereavement—itself an inference—an entire domestic tragedy. Somewhere, if he is rightly translated, the poet declares that he has been two years alone. Clearly, his wife has left him, and, that being so, she may have gone off with another man, accentuating the husband's grief for the loss of his daughter. The pearl, or is it the girl? is once spoken of as "secret," which gives only too much reason to suppose that the innocent heroine of the poem was illegitimate. So philology has dealt with one piece of literature, and yet they say the philologists are prosaic fellows. Turpin himself never more deftly lightened a heavy purse of its superfluous coin than these translators, quite unconsciously and after the manner of genius, deprived the "Pearl" of all evidence controverting their theories.

If the gayety of a science depends upon the temper of its devotees, evidently philology will not fit into the dismal category. But romance requires also the air of varied circumstance. Here, too, the philologer walks in wide-eyed expectancy. From the sands of Turkestan have come recently the fragments of a new Aryan language. The discovery of an inscribed spear-head might any day establish a new theory or mortally smite an old one. Years ago Professor Sievers declared that certain portions of the Anglo-Saxon poem of the Creation abounded in Continental words and phrases, and must be a translation from an Old Saxon original. For some time his rivals cheerfully demonstrated that he knew neither Old Saxon nor Anglo-Saxon. It looked as if his theory must remain in the limbo of unproved hypotheses. But one day another German scholar was rummaging in the Vatican library, and that day, in William James's pregnant words, "truth occurred" to Professor Sievers's theory—a sheet from the posited Old Saxon poem turned up in a book-binding. Here are suggested hazards of scholastic fortunes with which mere prospecting for gold or cornering cotton cannot vie.

With philologists one is ever in the realm of the imagination. Prof. Brander Matthews takes occasion in his recently published essay on the Speech of the People to praise King Alfred for his "intuitive knowledge" of the profound truth that language "lives in common speech and in daily use, rather than in grammar and in dictionary." See how the philological fancy glorifies Alfred for what the common man would suppose the great king couldn't help doing. But Professor Matthews sees vividly the insidious perils that hung over the grave origins of English prose. Had not Alfred had that instinct for colloquialism, he might easily have been perverted through reading the glossaries in Sweet's Earliest English Texts or similar organs of pedantry. Thus the infant English language might have been broken down at the outset by the sheer weight of its polysyllabic swaddling clothes. And note that it takes the trained philological imagination to perceive this service to England and the world. All of which brings us back to our original contention that, as sciences go, philology is distinctly in the gay division. If a philologist ever seems a dull dog, look out for him. He really is bursting with romance, and if you thwart him he may do you an injury.

GAMES AND TALK.

In formally opening the new links at Gravesend, the other day, Mr. Arthur Balfour made a short speech about golf. Even his oratorical genius was unequal to saying anything new on the subject, but he did say something that appears not to be true. Deprecating the practice of calling upon a public man—already sick unto death with much speaking—to make an address on every conceivable occasion, Mr. Balfour contended that speech-making was peculiarly inappropriate to golf, since it was "a game to be played and not to be talked about."

If this was meant for satire, nothing is to be said except that it was too subtle. As a matter of fact, talking about golf is one of the great and established features of the game. Ask the despairing wives who have to listen to all the

details of the match fought over again at dinner! Freeman's disgust at the "chatter about Harriet" was no greater than that of many a non-golfer compelled to listen to endless explanations of the way in which the ball became unplayable on the thirteenth and hung on the edge of the cup on the last hole. Veterans fighting their battles over again are not a circumstance to the long explanations of golf strategy and the "most wonderful shot I ever made," which go on with inexhaustible zest on club piazzas and around the tables in the café. Condemn the inveterate golfer to silence about his favorite sport, and it would lose half its charm.

What Mr. Balfour seems to have confused is the rule of taciturnity while actually playing, and the rule of limitless discussion and living the scene over again when the match is finally lost or won. Strict observers of golf etiquette go over the course like so many Trappists. The tradition of silence on the links is ancient and severe. Stories and facts without end illustrate it. There were the two old Scotchmen who played a closely-contested round without a word or whisper, until one of them uttered a golfer's oath as his ball jumped out of the cup on the eighteenth hole. The other turned upon him in a fury at his "unbridled loquacity." The conviction is generally held that the best players are the most close-mouthed. The man whom Walter Travis defeated in the finals for the British amateur championship wrote afterwards that the American was the most silent golfer he had ever encountered. His single remark to his opponent during the whole thirty-six holes was: "You are driving a very long ball." This is the kind of golden silence on the links which Mr. Balfour may have had in mind.

There is, to be sure, what is known as "conversational golf," in which contestants are privileged by agreement to keep up a ceaseless patter of guying and banter between strokes, but that is admitted to be a shameless departure from the rigors of the game. Yet the most punctilious player, who holds it a sacred obligation to let his words be few in the course of actual play, feels at liberty to overflow when it is ended. Then come the joyous recollections of the exact difficult lie and the astonishing recovery, the long and absorbing *post-mortems*, the nice pointing out just where the match was lost, the conclusive demonstration that if a wooden club had only been taken instead of an iron, or the ball not fallen into a heel-print in the hazard, a glorious victory would have resulted. There is also the utterly illimitable talk about the make of clubs and style of shoes and stance and swing and grip, which flows on no less fatedly and in much greater volume than Tennyson's brook. Golf not to be talked about! Why, it is one of the greatest provocatives to conversation ever brought into this tongue-wagging world.

It is true of all popular games that talking about them is inseparable from playing them. Fancy what would happen to academic conversation if its one great theme for a large part of the college year were to be taken away. Football gives its chief color to the speech of thousands of undergraduates for weeks and months. Before the season opens, there is the vast discussion of plans and possibilities. While the games are playing, the rising hope of American culture can talk of nothing else. After the last struggle has been fought out, there come the long regrets that its strategy or personnel had not been different; and the undergraduate mind carries the matter well into the winter, until it is time to enliven the conversation by speculating on the chances of the nine and the crew in the spring. If it were not for games and talk about them, we should not have any of that play of wit and fancy, and that mind sharpening mind, which this athletic age has made such a social staple. No games, no conversation. A young lady of our acquaintance put the case exactly as it is. She was thrown into the company of a college senior, with whom she endeavored to make talk. "I tried him on books," she said, "but only made him uncomfortable. I asked him about the theatre, but he merely looked blank. I inquired what he thought about politics, but found that he had no thoughts. Then I saw what had to be done, and suggested athletics. Instantly he brightened up, ran on fluently for an hour, and concluded that I was not such a fool as he had feared." So we see that the game may not be worth the candle, but is certainly worth the talk.

RECENT FRENCH HISTORY.

PARIS, December 2.

The latest of the many volumes which Emile Ollivier has in his old age written on "L'Empire Libéral" (Garnier), in which the history-making activities of his prime were spent long ago, practically concludes his *Apologia pro Vita sua*. It must be said that time, with its appeasements, had already proceeded to his essential justification. Never was a French minister more vituperated by his countrymen of every degree. After their crushing defeat by Germany, they were bound to find scapegoats. In 1867 Republican agitators had prevented the efficacious army reform urged by Marshal Niel. In the fatal July session of Parliament in 1870, Gambetta shouted loudest for war and branded opposition as *scélérate*. They profited by the Emperor's defeat, which was at the same time a national disaster, to work their Revolution; and when this, instead of mending matters, ended them by the loss of two provinces, they turned first, ungallantly, against the Empress Eugénie—it had been "her war" all along—next against Emile Ollivier, Prime Minister when they forced the Emperor to war against his own feeling and judgment. Ollivier's unhappy phrase of the *cœur léger*, with which he looked forward to the war he had in reality opposed, was taken from its context and for many years he sank under its opprobrium. He has bided his time. Has he justified himself now? Essentially, yes—and, along with himself, the Empress, who was never a friend of his, but whose rôle was grossly exaggerated from social and religious as well as political hatred. Her utterance as she escaped from the Tuileries still best sums up that closing of an historical epoch: "We have been dupes!"

The story is long, but it is well told by this too theoretical statesman who was a chief actor in it and who remains a master rhetorician. The importance of these volumes extends far beyond the defence of their author and the rectification of still burning disputes. The "Liberal Empire" was a spontaneous progress of the French people toward representation by an executive power. Its utter failure has left France under the absolute sovereignty of the legislative body in the present Parliamentary Republic. The details of the diplomacy at Ems and the political workings at Paris are here told by one who knows, and, on the whole, with surprising impartiality.

"Napoléon III, devant l'histoire" (Dujarric), by Pierre Gérard, is a popular volume intended to lift the clouds from the memory of the *grand méconnu*. The undoubted progress and material prosperity of France under the hapless Emperor furnish easy arguments,

which, moreover, deserve a place in serious history. The preface is by the Marquis de Dion, progressive leader in the automobile industry and in the plebiscitary political party.

G. Weill, professor in the university faculty of Caen, writes from the outside the "Histoire du Catholicisme Libéral en France (1828-1908)"—a movement which prepared Conservative minds for the successive acceptance of four essentially revolutionary governments: King Louis Philippe, the Republic of 1848, the Second Empire in its Liberal phases, and the Third Republic, so long as this last tolerated the "rallying" of Catholic Frenchmen to itself. Although its formulæ are now discredited by both sides, this movement had consequences which endure in the social constitution of to-day. In this it is like the other defunct Liberalisms of the Continent. Its history in the main had already been written from the inside by the biographer of Montalembert, who was so long its leader. The present volume is from the publisher of philosophy, Alcan. With it should be noted a book on a new movement from Georges Goyau, Catholic editor of the *Revue des Deux Mondes*—his fourth series, "Autour du Catholicisme social" (Perrin). It treats discursively of the church of the people (in Ireland); Gladstone's State Church; the church and political novelties (illustrated by Cardinal Consalvi); and various present-day "Catholics of action."

Maurice Quentin-Bauchart, born a citizen of Paris and long one of its municipal councillors, publishes the notes of his impressions as a grown boy of the Siege and Commune—"Les Evènements de 1870-71" (Juven). They are prefaced by the Napoleonic authority, Frédéric Masson of the French Academy. Gen. Kirkpatrick de Closeburn, who is of the same cosmopolitan Scottish clan as the Empress Eugénie, publishes his remembrances of youth fighting for a predestined lost cause—"Souvenirs Carlistes" (Alphonse Picard). The death of the last Don Carlos gives them a shadow of actuality.

"Fachoda" (Flammarion), by ex-Foreign Minister Hanotaux, is an instructive revelation from diplomatic documents and inside knowledge of one of the most distressing incidents of recent French history. The international preliminaries of the brilliant Marchand expedition; the hesitating utterances of the British Foreign Office, which did not venture to claim exclusive rights in the Sudan until forced by that handful of Frenchmen; and, quite disregarded by a world which attends only to sensational history in the making, the final recognition by England, as a consequence of that humiliation of France, of the vast colonial empire which France has taken for herself from the Niger and Congo to the Mediterranean—these are substantial additions to our knowledge of contemporary history. It is natural that M. Hanotaux should insist on the ignorance of the situation which he had prepared, or the neglect of it, on the part of his successor, M. Delcassé. The Fashoda incident was the immediate and condign punishment; but it is not sufficiently brought out that it was Minister Delcassé's subsequent profiting by England's need in the Sudan which secured the consolidation of French rights in Africa. Here, too, as if a republic can have a successful foreign policy only by accident, the Delcassé negotiations ended in the seeming humiliation of Algeciras, which again has worked beyond all expectation for the recognition of the African rights of France by Germany. Delcassé has now downed Clemenceau, who thus drew final victory from defeat; but the Republic has taken back neither Delcassé nor Hanotaux to direct its policy. It is lucky for future history that the ex-minister concerned should elucidate all this first period. It makes possible a clear understanding of a movement that otherwise would seem made up of incoherent leaps backward and forward. The substance of the book first appeared in the *Revue des Deux Mondes*.

"La Politique réaliste à l'extérieur" (Fasquelle), by Pierre Baudin, explains what that ex-minister of public works would have the foreign policy of France, now that the Republic is not profiting by his counsels. It is the book of a Moderate Radical, who has a patriot's good will with some knowledge of international events as they really happen, and not as newspapers report them. In name his "realist" policy is that proclaimed by Prime Minister Briand as his own "policy of realizations." This leaves the mind of Englishmen and Americans blank, for they hardly ever allow ideals or ideas to intervene in practical politics, but always and everywhere realize whatever is in sight. The reading of a book like this of M. Baudin is therefore a help to the understanding of French policies—no easy thing for the Anglo-Saxon.

"Terroristes et policiers" (Juven), by Jean Longuet and Georges Silber, is an evidently inspired book on a most painful subject of contemporary history—the underground working of the Russian police. The preface is by W. L. Bourtsev, whose accusations have so notoriously interrupted the operations of the Russian police abroad. The sympathies of freedom-lovers are inevitably torn between their dislike of bureaucrats striving desperately to save an autocracy at bay and their distrust of a Nihilism sticking at no crime in the pursuit of its own ideal of liberty.

S. D.

Correspondence.

THE ORACLE OF LOVE IN THE TWELFTH CHAPTER OF "LA VITA NUOVA."

To the Editor of The Nation:

Sir: After Beatrice had denied to him her salutation, Dante declares that Love appeared to him in a vision, and sighed, and said: "*Fili mi, tempus est ut prætermittantur simulacra nostra*—my son, it is time for us to lay aside our counterfeiting"; and that, having so said, Love wept for pity, and to Dante, asking, "Lord of nobleness, why dost thou weep?" replied: "*Ego tamquam centrum circuli, cui simili modo se habent circumferentiæ partes; tu autem non sic*—I am as the centre of a circle, for which all parts of the circumference are alike; but thou art not so." Perplexed, Dante again asked: "What thing is this, Master, that thou hast spoken thus darkly?" Love only replied: "Demand no more than may be useful to thee."

Love's injunction, "it is time for us to lay aside our counterfeiting," is clear. Beatrice, and others, had misunderstood Dante's "screening" homage to another lady; it is time, therefore, to confess the truth to his real lady. Obediently, Dante addresses to Beatrice a *ballata*, which says of its maker:

> Lady his heart has been
> of such fixed constancy
> that his each thought incites him to serve thee:
> early 'twas thine, and never hath it strayed.

Apparently, this obedience, though due, is to entail disaster for Dante, because he is not, like Love, "as the centre of a circle, for which all parts of the circumference are alike." Also, present understanding of what Love means would not avail to avert the disaster, otherwise an explanation would be "useful." We should expect, accordingly, to find the key to the oracular utterance in the direct consequences of Dante's obedient "laying aside of counterfeiting."

> After this above written vision [Dante writes], when I had already said those words [to Beatrice] which Love had charged me to say, many and divers thoughts began to assail and tempt me, each one almost irresistibly, among which thoughts four seemed most to disturb my life's repose. The first whereof was this: The lordship of Love is good since it draweth the mind of his liege from all evil things. The next was this: The lordship of Love is not good since the more faith his liege beareth him, the more heavy and more grievous straits must he pass. The next was this: The name of Love is so sweet to hear that it seemeth to me impossible that its action in most things be other than sweet. . . . The fourth was this: The lady for whom Love constraineth thee thus is not as other ladies that her heart be lightly moved. And each assailed me so, that it made me stand like one who knoweth not by which path to take his way, and who fain would go, yet knoweth not whither to turn. And if I thought that I would seek a way common to all, namely, where all might be in accord, this way was most inimical to me, namely, to call upon and yield me to the arms of pity.

Drawn "irresistibly" four ways in turn, Dante is obviously in a position unlike "the centre of a circle, for which all parts of the circumference are alike." Concerned as he is for his own welfare, he can see no way out, no centre of accord, except in his lady's pity, which he forebodes must be "inimical."

The foreboding is immediately justified. From Beatrice he finds not pity, but mockery. So far from pity making accord between his four conflicting thoughts, his appeal to pity only involves him in a new fourfold mystery—

whereof the first [matter] is, that ofttimes I grieved when memory moved my fancy to imagine how Love dealt with me. The second is how Love did many times suddenly assail me so mightily that there remained naught in me of life save a thought that spake of this lady; the third is, that when this battle of love assailed me thus, I set forth, as 'twere all pallid, to behold this lady, believing that the sight of her would defend me from this assault, forgetting what befel me through drawing nigh to such gentleness; the fourth is, how that such sight not only did not defend me, but finally discomfited the small remnant of my life.

Thus the lover seems at the point of spiritual death, when suddenly all is changed. Dante presently announces "a new matter and more noble than the past." Questioned as to the end of his love, he replies: "Ladies mine, the end of my love was once this lady's salutation. . . . But since it hath pleased her to deny it to me, Love, my lord, by his grace hath placed all my beatitude in that which cannot fail me," namely, as he says presently, "in those words which praise my lady."

Love, "lord of nobleness," has at last revealed himself to Dante, whose own love to now has been ignoble, because self-centred, craving reward in the salutation. The four thoughts which drew him from his repose were all for his own welfare. Henceforth his love is to be centred in self-effacing service, in pure homage. He will give all, asking nothing; and therefore he can lose nothing. Not pity, his "enemy" indeed, but renunciation, was signified by that "centre of indifference" to which Love, "lord of nobleness," had likened himself. Such love Dante joyously believes he has now found, and declares in the sonnet, "Love and the gentle heart are but one thing." In the canzone, "Ladies that have intelligence of love," he first expresses this "new matter and nobler" of love, this selfless homage. It is significant that Bonaglunta cites (Purg. xxiv, 51) this canzone as demarking the "sweet new style," when asking Dante to define that style. To him Dante replies:

I am one who, when
Love me inspireth, note, and in such wise
as he dictates within, go setting forth.

The "oracle of Love" in the twelfth chapter of the "Vita Nuova" is just such a dictation. Love's obscurely declared nature, when realized by Dante through mistake and suffering, is what turns Dante's "young life" into his "new life," his regenerate life, when his selfish love is born again in the new intelligence of the love which is nobleness.

But fulfilment of love through self-renunciation is not yet perfect. While Beatrice lives, Dante has at least the reward of her presence. Presently, death robs him of even that. He despairs, and turns for comfort to the Pitiful Lady (*la donna pietosa*). Again forgetful of the nemesis which appeal to pity brought, again misunderstanding the love which is nobleness, he said within himself: "It cannot be but that noble love is with that pitiful lady." And he thought of her: "This is a gentle lady, fair, young, and wise, and hath appeared perchance by Love's will, in order that my life may find rest." But such was not the will of Love, "lord of nobleness." His life does not find rest, but is distracted by a new "battle of thoughts," by one justifying selfish solace, another commanding unselfish loyalty. For a while the selfish thought dominates, until "a mighty vision" of young Beatrice leaves him penitent, and filled with "tribulation" such that his eyes weep so

that Love
encircleth them as with a martyr's crown.

Thus this spiritual crisis recorded in the forty-first chapter exactly repeats that already recorded in the sixteenth. In each case, centring his love in pity, he is at once drawn opposite ways by contrary thoughts, and is then suddenly confronted with Beatrice, first in the flesh, the second time in "a mighty vision" (*una forte imaginazione*). On the one occasion her girlish mockery, on the other the silent reproach of the girlish figure he had first seen and loved, utterly discomfits him. From each discomfiture springs the realization that the true "centre" of the love which is nobleness lies not in the solace of indulgent pity, but in the self-devotion of the "gentle heart." The ignoble lover seeks to realize his own self-will, and finds only unrest and despair; the noble lover submits his own will to the will of his beloved. After the first crisis, Love, by his grace, had taught Dante the unfailing beatitude of selfless contemplation and praise of his lady mortal; so now, after the second crisis, Love will teach the still higher beatitude of praise and ideal contemplation of her immortal. In the last sonnet of the "Vita Nuova" this "new intelligence" is dictated by Love. Drawn ever upwards by a "new intelligence that Love, weeping, implants in it," his "pilgrim spirit" soars to the Empyrean, where it beholds Beatrice in glory, yet is incapable of rightly declaring that glory.

Love, dictating this new intelligence of himself, weeps—as he had wept when first, after the denial of the salutation, he had declared darkly his true nature. Evidently not even yet is Dante's love fully subdued to the love which is nobleness. Before his "pilgrim spirit" may fully realize and declare the glory of Beatrice, that is of Love himself (the identity had been revealed by Love in chapter twenty-four), it must pass through Hell and Purgatory; must again, after its errancy, be confronted with Beatrice, and, appealing to pity, seem to find pity an "enemy" still. Though angels are moved to pity by his misery, Beatrice is sternly unrelenting. In his manhood, as in his "young life," he must pay the "scot that sheddeth tears." At Beatrice's rebuke.

Then at my heart there gnawed so great remorse
that I fell stricken (Par. xxxi, 88-9).

But after this third and last crisis, Love finally reveals himself fully in the knowledge of his kingdom, Paradise. Drawn upward to the Empyrean again, as his "pilgrim spirit" had been drawn in the "Vita Nuova," Dante now sees not only Beatrice in her glory, but the Godhead also—this last as "three circles of threefold color, and of one dimension," of which the third seemed to be "fire that was breathed forth equally by both" the other two. This third circle symbolizes the power of the Holy Ghost, or Love. Dante's mortal faculties failed to sustain the beatific vision; but not until already his

desire and will were rolled,
even as a wheel that evenly is moved,
by the Love that moves the sun and other stars.

That is to say, having at last realized the Divine Circle, the one ray, the virtual centre of which is Love, Dante's whole moral nature is subdued to harmony with that Love, and becomes *concentric* with it. Selfish desire and self-will are quenched; he is able to say with the blessed, in Piccarda's words:

In His will is our peace.

Now Beatrice's seemingly "inimical" denial of pity is explained. In the "Vita Nuova" (chap. xxiv) Dante had foreshadowed her relation to him as that of Christ to the sinner. "Whom the Lord loveth he chasteneth"; it was Beatrice's chastening which at last made Dante's love also "as the centre of a circle, for which all parts of the circumference are alike"—that is to say, as we may now interpret, not a selfish passion blown hither and thither by the four winds of desire, but a joyous acquiescence in the will of the loved one, a "centre of indifference," such as Piccarda intends when she answers Dante (Par. iii, 70-2):

Brother, the quality of perfect love (*carità*)
stilleth our will, and maketh us desire
but what we have, nor giveth other thirst.

But while seeking nothing for itself, this perfect love is a radiant centre of loving charity equally for all. In heaven, where all are such radiant centres of love, there is, indeed, no distinction between giving and receiving; all are as "centres of circles, for which all parts of the circumference are alike," since, as Virgil says (Purg. xv 73-5):

The more on high who one another know,
the more are to love well, the more love is,
and like a mirror each to each gives back.

As if to symbolize visually Love's self-description, Dante represents the spirits of the more blessed as literally centres of flaming circles. The spirits in the Moon appear as merely shadowy human forms; in Mercury the shadowy forms begin to glow; in the higher planets the glow hides the enclosed form, and the spirit voices sound from the centres of these "torches" or "suns" or "splendors." One spirit, San Pier Damiano, is explicitly described as "love" at the centre of a whirling circle of light (Par. xxi, 79 ff.); and the Virgin Mary becomes the centre of "a radiance circle-formed around her," by "the angelic love" of Raphael (Par. xxiii, 94 ff.). Finally the Godhead appears as a threefold circle, within which Dante seems to see the image of Christ, that is to say, of Love himself. Visually regarded, Love's dark words in the "Vita Nuova" could not be more fully justified.

If the above interpretation of these dark words be correct, they are by no means the mere *obiter dictum* or even unexplained mystification that the commentators have left them, but form the dramatic announcement, and contain the essential tenet, of the religion of love embodied in the "sweet, new style" of both the "Vita Nuova" and the "Divina Commedia."

JEFFERSON B. FLETCHER.

Columbia University, December 10.

FRENCH ACCENTS ON PROPER NOUNS.

To the Editor of The Nation:

Sir: The spelling of the name of the poet Heredia (without any accent) in your article on Father Tabb in this week's *Nation* tempted me to send you, for your next list of *errata*, a corrected Hérédia. That, at least, was the spelling finally agreed upon by the revising editors of the "New International Encyclopædia," after a good deal of doubt and careful consulting of the best authorities. The busy lexicographer cannot always lay his hand on the works of the author whose fate he is deciding, and an American encyclopædia may be pardoned for erring once in a while in good company. To this day, not to mention lesser lights, Brockhaus (1902) has Hérédia, and so has the almost infallible Garollo ("Dizionario Biografico," 1909), while the last Meyer, though it has discarded the accents in the article "Heredia," retains them under the rubric "Französische Literatur." And to add to the perplexities of cyclopædia-making, there appears an apparently unquestioned Hérédia (the maiden name of Mme. Henri de Régnier) in "Qui êtes-vous?" for 1909-1910. But, for all that, if we turn to the works of the poet, we find that Heredia it is, or rather seems to be, for the sceptical lexicographer may be pardoned for thinking that nothing is certain in his special pursuit. Breathes there a man who can positively assert that so recent a celebrity as President Casimir-Perier never spelled his name with an accent over the first *e*? Here is the "Grande Encyclopédie" with only Periers, while the "Nouveau Larousse" has only Périers, though the President, still referred to in a heading as "Périer (Jean Casimir)," is taken out of their list and treated, unaccented, under "Casimir-Perier." A still more modern man, ex-Premier Clemenceau, appears as Clémenceau in the "Grande Encyclopédie," as well as in Vapereau's authoritative "Dictionnaire universel des Contemporains" (1893) and as Clemenceau in Larousse. It is only within the last few years that the latter spelling has been generally adopted by newspapers in France and elsewhere.

But there is still some uncertainty concerning the spelling of a more famous name than has as yet been mentioned. Most encyclopædias write Fénelon nowadays, but the doubts that preceded the adoption of this spelling for one encyclopædia, at least, are still fresh in the minds of some of us. For what do we find when we turn to some standard editions of "Télémaque" or to various important works containing the name of its author, in the Columbia Library? Here is Voltaire's "Siècle de Louis XIV," in the 1785 edition of his complete works, with Fénélon; a copy of "Dialogues sur l'éloquence en général" has appended a letter "written by the late Fenelon," without any accent on the name, either on the title-page or in the text (the distinction is important); here is an edition of "Télémaque," by Fénélon (Paris, 1835), and here one by Fénelon, 1836, and again Surenne gives us an American Fénélon, 1856, and so on.

It is, indeed, greatly to be regretted that the French Academy has never spoken its fiat concerning the spelling of the great names that adorn French literature. Though we find in the preface to the last edition of the "Dictionnaire de l'Académie Française" the incidental mention of Fénelon, we are warned that the Academy does not concern itself with words pertaining to cyclopædias.

Is it, then, to return to Heredia, unreasonable to surmise that the poet, coming to France when very young, at first naturalized his name by accenting it, and afterwards, as a famous writer, dropped the accents? Perhaps one of your learned contributors may throw some light on this subject. Gustav Pollak.

New York, December 4.

TURNER AND CLAUDE LORRAIN.

To the Editor of The Nation:

Sir: Permit me to add to your interesting article on "Claude Lorrain, Teacher" (November 4), some hints which may be of service to students of painting and to visitors to the National Gallery in London.

Turner made his great mistake when he willed to the English nation (the National Gallery) his best evening and morning pictures, with the proviso that they should be placed side by side with the best morning and evening pictures of Claude Lorrain owned by the Gallery. The result is an instructive and wholesome lesson in the direction pointed out in your above-mentioned article; and it is of special value to the devotee of the present style of painting for effect, however achieved. Indeed, this style of "however achieved," whether by loading color or by rough canvas or paper, is the least permanent and the least instructive. The true mission of painting is to deceive the eye by careful and true perspective painting, and not by semi-plastic methods, as may be clearly seen by comparing Turner's paintings with those of Claude Lorrain.

While Turner's evening canvas is brilliant in color and manipulation, showing the great colorist, it loses immensely by the immediate proximity of Claude Lorrain's clear, bright sunlight, with its transparency of atmosphere attained by the simplicity and purity of the painter's palette, and by smooth, plain painting. Claude Lorrain's Morning is the morning of southern Europe; it has the cool crispness of the early hours, when the clear outline of the crescent moon shows the recent retreat of night. Turner's Morning shows the dirty grayness of an early, misty English morning. The heavily loaded colors in Turner's paintings have in time assumed the dead cover of dry paints, to which has been added the gray dirt which unavoidably settles on projections. The smoothness of the well-covered canvas of Claude Lorrain and its purity of colors have preserved it from the havoc of time. Edward Taussig.

St. Louis, Mo., December 1.

NAMES IN "THE SOUTHERNER."

To the Editor of The Nation:

Sir: I wish to correct a misstatement of fact made by your reviewer of "The Southerner," if you will be so kind as to permit me.

He named a number of men and several newspapers in North Carolina which (he said) I had used, under thin disguises, in the story.

This I wish to disclaim, for the book is made up of fiction from beginning to end. There are only two persons whose characters or careers suggested anything in it, and your reviewer has happened to guess only one of these two, and he is dead. I should much prefer, and I think it is fair to ask, that the gentlemen whom he named should not think that I have been guilty of what I should regard as very bad taste.

It may interest your reviewer to know that the places and some of the persons named in the book are declared by an Alabaman reviewer to be places and men in Alabama; and I am informed by a Texan gentleman that he recognized in the story one character as a well-known man in public life in Texas.

The Author of "The Southerner."

New York, December 2.

Literature.

BOOKS FOR CHILDREN.—II.

The wisest men in some directions are oftenest the most genial men in others; Charles Perrault, the Rev. Charles Dodgson, and Edouard Laboulaye were all associated in their several lines of thought with learned societies. The last-named was citizen, jurist, and scholar, but is perhaps best remembered, as were also Perrault and "Lewis Carroll," for his imaginative work. A volume of his "Fairy Tales" (Dutton), illustrated by Arthur A. Dixon, has been issued, in an artistic Nister edition, with a most sumptuous cover, which such excellent internal wealth deserves. The publishers of the new issue of "Through the Looking Glass" (Dodge) have curiously omitted Mr. Dodgson's name from the red, white, and blue cover which, in its loudness, belies the refined humor of this classic.

Mothers will be especially indebted to Alicia Aspinwall for her "Can You Believe Me Stories" (Dutton). While these do not all maintain the same high level, the nonsense is, on the whole, of exceptional cleverness. The professional story-teller will find distinctive material in such a piece of fancy as "The Irrepressible Pie." On reading "The Land of Nod" (Crowell), one is impressed by two facts: Mr. McSpadden has enjoyed the telling and has engaged an artist, Edward L. Chase, whose drawings indicate an equal amount of zest. Mr. McSpadden has also been an excellent student of "Lewis Carroll"; the adventures of Tinkie and Tess, while not as poignant as those of Alice, are rich in the novelty which children like. Mrs. Frances Hodgson Burnett's "Barty Crusoe and His Man Saturday" (Moffat, Yard), in excellent type and with line drawings, artistically arranged even though crude, is inferior to most of her recent children's work. It is a continuation of "The Good Wolf."

Lured by the name of Mary Raymond Shipman Andrews, we are disappointed to find her story of "The Enchanted Forest" (Dutton) rather commonplace in its effort to be uncommon. The different tales contain a large amount of the incongruous, which is forced and imitative. In this type of book, it is not enough that one should scatter throughout the pages such names as the "Whang-Doodle Pup," but the art rests in making the fantastic instinct with life.

Dr. Charles Eastman, otherwise known

as "Ohiyesa," has retold, with the aid of Elaine Goodale Eastman, some Sioux tales. The volume is entitled "Wigwam Evenings" (Little, Brown), and is full of the Indian spirit, as well as the Indian manner. E. W. Deming, whose familiarity with Sioux life is as unquestioned as Dr. Eastman's knowledge, has drawn the pictures.

We cannot help feeling that the multiplicity of new fairy tales and folklore only serves to distract attention from the really notable imaginative books of this character. It is partly for this reason that Rackham's "Grimm," as well as "Grimm's Animal Stories" (Duffield) with John Rae's effective pictures, should find a hearty welcome. In passing, G. E. Theodore Roberts's "Flying Plover" (L. C. Page), deserves commendation for its atmosphere, born of close intimacy with life in the Far North.

The Frederick A. Stokes Company has issued "Hänsel and Gretel," adapted from the libretto of Adelheid Witte, and embellished with color plates by M. L. Kirk, which have the distinction of being full of lively imagination and of realistic child humanity. This is the first time, so it is asserted, that any version of this fairy tale has been published in English purporting to follow Humperdinck's opera.

Guides to appreciation are most difficult to write attractively, since the purpose is avowedly didactic. But Dr. Daniel Gregory Mason has, in his "Child's Guide to Music" (Baker & Taylor), discussed most entertainingly the essentials of piano, orchestral, and vocal work, mingling anecdote and history with acute and vivid analysis. A sumptuous volume, "The Children's Book of Art" (Macmillan), contains a cursory survey of the art of all ages, and A. E. and W. Martin Conway, who are the authors, adopt a narrative style; the reproductions are strikingly rich. But we doubt whether this book is as vital in its method as Charles H. Caffin's "A Child's Guide to Pictures" (Baker & Taylor), an ideal course of instruction. Macmillan is also the publisher of "The Children's Book of Gardening," by Mrs. Alfred Sidgwick and Mrs. Paynter.

There is no need of emphasizing the meaning of "What's in a title?" when that title is "Around the World with the Battleships" (McClurg), a "log" story and a sketchy guide all in one. The book is by Roman J. Miller, chief turret captain, U. S. S. Vermont. The text is fragmentary, but none the less full of incident and instruction. James B. Connolly has written a vigorous introductory note. The "make-up" of the book is startlingly gaudy. Franklin Mathews follows his successful "With the Battle Fleet" with a record of the homeward journey, which began July 7, 1908, and ended February 22, 1909. The new volume is entitled "Back to Hampton Roads" (Huebsch), and is full of the acute observation of a very clever newspaper man.

In a survey which is necessarily limited in scope, the *variety* of fiction can only be suggested; at least, a conservative 60 per cent. of the year's literary output for children consists of this special *genre*. The series class is as strong as ever, and will sell, despite the disfavor of the librarian. Among these books we believe Marion Ames Taggart's "Six Girls and the Seventh One" (Wilde) is most successful in retaining some of its initial freshness. The cheerful tone of the character work and the simple introduction of love add distinction to the story. There is a large amount of pleasing vigor in Winifred Kirkland's "Introducing Corinna" (Revell), which is intended for older girls and deals with the trials of a young woman who becomes head of a boarding school, and who is as refreshing as her picture, used as a frontispiece. The plot is defective in places, but the general tone is wholesome.

Another story deserving of special consideration is "When She Came Home from College" (Houghton Mifflin), in which the authors, Marian K. Hurd and Jean B. Wilson, depict the home trials of a college graduate who has ideas as to how the work-a-day world should be run. The book contains humor and distinctive character sketching.

We are never disappointed when we turn to children's books of practical scope. The ingenuity of D. C. Beard shows no abatement in "The Boy Pioneers" (Scribner), which is not a story, though the pages are plentifully scattered with facts about Boone, Crockett, and others of the same character; those boys who have the spirit of pioneers in them are told how to live the lives of pioneers, and that object alone should attract an enthusiastic army of "campers." Joseph H. Adams is the author of another handy volume discussing important machinery and the power that moves it (Harper). The young mechanic will welcome its full descriptions and its tables and definitions.

The experimenter who must exist in every household will find certain delight in T. B. Russell's "Science at Home" (Fenno), which gathers together a number of easy scientific "tricks" readily performed with the aid of home-made devices. The diagrams might have been more carefully reproduced. In Carrie S. Newman's "Kindergarten in the Home" (L. C. Page) the author attempts to train parents in the intricacies of Froebel's gifts. Attempting a narrative style, the book, nevertheless, is a "manual" in spirit, and will no doubt be suggestive, though it is in no way brilliant. In their "Romance Series," the Lippincotts have this year imported Dr. James C. Philip's "Romance of Modern Chemistry," best described in the words of its sub-title: "A description in non-technical language of the diverse and wonderful ways in which chemical forces are at work, and of their manifold application in modern life." The text reads like a narrative.

Of a more strictly entertaining character for young people from four to ten is Elsie Duncan Yale's "When Mother Lets Us Give a Party" (Moffat, Yard), a suggestive little guide which will bring fun to many boys and girls at a loss "what to do" on such occasions. In this same series, Frances Duncan, who edits the Garden Department in the *Ladies' Home Journal*, tells little folks what is best to plant, "When Mother Lets Us Garden." Could the publishers suggest some ways in which fathers might be advised?

Fairyland we enter through the portals of poetry, contained in Alfred Noyes's "Magic Casement" (Dutton), an excellent anthology for old as well as for the "medlumly" young; the compiler analyzes in an attractive manner the wide realm known as the "faery world," whose borders touch the thin line separating it from "delicate reality." In that realm there are both the spirit of pure fancy and the essence of the heroic which is partly national tradition. In the latter class, we find E. M. Wilmot-Buxton's "Stories of Norse Heroes" (Crowell), told in a direct style with some of the Saga spirit; this is more dignified, even if it is less simple, than John P. Edmison's effort to cover much the same territory in his "Stories from the Norseland" (Penn Pub. Co.).

Kate Stephens's "Stories from Old Chronicles" (Sturgis & Walton Co.) bears evidences of careful planning and in scope is very suggestive; the collection is a commendable introduction to Froissart and other recorders who are too little known these days. To a certain extent Spenser, in the midst of his Allegory, might be regarded as a poetic historian, and so "The Faerie Queen" may be approached as reflective of royalty in England. A. J. Church has retold some of these adventures in a way entertaining to young people (Macmillan), but he has not accomplished his task as distinctively as Lawrence H. Dawson (Crowell), who has been fortunate enough to retain much of the ancient virility and romantic flavor of the original. This edition cannot be passed by without special congratulations to Gertrude Hammond, some of whose color plates are of pleasing richness. The Crowells are likewise to be thanked for their edition of Douglas C. Stedman's "Story of Hereward," which not only may serve as an introduction to Kingsley, but will also prove excellent reading as a chronicle-romance.

Every country has its quota of legend, and each year brings to our desk stories retold, perhaps with the idea that amidst the rush of modern things it is difficult to keep in touch with the original flavor of other ages. H. L. Havell has written a critical introduction for his "Stories from the Iliad" (Dodge Pub. Co.), in which he reveals the sincerity which prompts his task; the text is conscientious and compact in its desire to be faithful. In the same spirit, Elizabeth D. Renninger approaches "The Story of Rustem and Other Persian Hero Tales from Firdusi" (Scribner), with effectively lined and tinted drawings by J. L. S. Williams.

The Century Co. in a series of stories "Retold from *St. Nicholas*" is catering partly to the heroic in all children. This year they have published "Stories of Chivalry," "Stories of Greece and Rome," "Stories of Classic Myths," "Stories of the Ancient World," "Stories of Royal Children," and "Stories of the Middle Ages," a sufficient assortment for every taste.

THE LAST DAYS OF PAPAL ROME.

The Last Days of Papal Rome. 1850-1870. By R. de Cesare. Abridged with the assistance of the Author and Translated by Helen Zimmern. With an Introductory Chapter by G. M. Trevelyan. Boston: Houghton Mifflin Co. $3.50 net.

Dr. Raffaelle de Cesare has steadily risen in authority on the later history of the Risorgimento. His first important work, "The End of a Kingdom,"

described the last years of Bomba's reign and the collapse of the Bourbon régime at Naples. His present book, written on a similar plan, tells the story of the last twenty years of Papal Rome. His method is to collect all possible material and then to classify it according to topics. So we have one chapter on the aristocracy, another on theatres and newspapers, a third on the Sacred College, and so on. Much of the evidence has been collected from survivors of this period; some has come from inedited private correspondence; and Dr. De Cesare's own memory, which goes back to 1860, supplies a part.

The rigid historical student may complain that there are few documents, and no chronological narrative; he may ask for authorities, and find no footnotes. But if, on this account, he concludes that the book is not worthy of his serious attention, he will make a great mistake. From the nature of the case, it was impossible for Dr. De Cesare to cite many of his informers by name. The point is, does any special statement seem alien to the men or to the society that he describes? No one who knows those twenty years intimately can doubt that Papal Rome is here drawn to the life. On reflection it will also appear that this method serves well for giving the very heart of a period which had no regular parliamentary development. The Papacy of those decades was like a water-logged vessel drifting towards a cataract: its crew, instead of observing the direction of the current, manned the oars and rowed frantically downstream. If any one kept the log, it has not been published. The historian must trust, therefore, to the testimony of spectators on the banks.

It is these spectators whom Dr. De Cesare has pumped to so good purpose, that, although we have not now, and may never have, the inside history of what went on in the Vatican between 1850 and 1870, we know what is to be known, and we can surmise as to much that has been hidden. Merely on the personal side, his book is notable. Here are portraits of Pio Nono, who was not at all the mild saint that latter-day beatifiers make him out; of Antonelli, who held the rudder and bade the oarsmen row with all their might to perdition; of Mérode, the Belgian fanatic, who beguiled Pius for a time, and was then thrown over by him; of the Duke of Sermoneta, of Prince Alessandro Torlonia, and of many others who played their part, on one side or the other, in those fateful years.

Besides much information about the Papal system of finance—if that may be called a system which had none—of judicial and municipal administration, and about economic and commercial conditions, the reader will find scores of sidelights on the actual life of the various classes. Taken one by one, these items may not seem important; but their cumulative effect cannot be gainsaid. All the evidence, whether special or general, proves that the Papacy, as a form of secular government, had completely broken down. There was little or no justice in the courts; neither honesty nor dispatch in the bureaus; no check on immorality, lay or clerical, in the capital; no help for agriculture in the provinces; no tolerance; no education. These facts Dr. De Cesare tells without invective, and without even partisan bias. He recognizes that, since they speak for themselves, he does not need to expound or denounce them.

On the growth of Papal intransigence in political and mixed affairs, this book furnishes much information. It shows us how, in 1850, Pius IX returned to Rome an immutable reactionary; how, being in this frame of mind, he became an easy tool for the Jesuits to use; and how they formulated their intransigence in the dogmas of the Immaculate Conception and of Papal Infallibility, and in the Syllabus, which, until Pius X's imitation of it appeared two years ago, was regarded as the *ne plus ultra* of obscurantism. On the political side, we have an informal account of the Piedmontese efforts at negotiation; followed by the Garibaldian expeditions, by the departure and return of the French, and by the downfall of the Papacy on September 20, 1870. In this field should also be classed the methods and attempts of the conspirators, about whom Dr. De Cesare has a good deal to say, and such an episode as the kidnapping of the Jew boy, Mortara, which did more than any other single Papal act to horrify the conscience of the civilized world. The reader needs to be informed that all these matters are treated at much greater length in the original. The condensation has been made with an eye to what is most significant for the English-speaking public; and it has been done well: but the student should consult the two large volumes of the Italian work, for much collateral evidence and for such documents as were available.

The total impression left by Dr. De Cesare is that of comprehensiveness. Papal Rome is all here, inglorious, picturesque, immoral, cynical, moribund—a system which originated amid mediæval conditions, and projected itself through seven decades of the nineteenth century, amid conditions which it could not live in and which it therefore cursed. Through these pages pass and repass the monsignori, the prelates, the Jesuits, the worldly cardinals, the unyielding ecclesiastics, the seeming-genial Pius, handsome in face, soft of hands, but with that capacity for bursts of rage which belongs to very amiable persons when they are thwarted. Here are the artists—the painters, sculptors, and musicians—from all over the world; here is that cosmopolitan society, easy-going and irresponsible, that no scandal could shock. And here are the patriots, working steadfastly in the shadow of the gallows, or, as at Perugia and in the Romagna, coming into the open to face death in actual combat. The French garrison in Rome, the Austrians in the Legations, add to the paradoxes with which these years are strewn.

It is well that so true a book, written so attractively, should be read by American Catholics, who have been taught, by the recrudescent Ultramontanism which prevails just now among the American hierarchy, that the Rome of Papal times was a sort of Paradise, where virtue and piety held unbroken sway in all hearts. In Dr. De Cesare's unvarnished tale, they will come to understand what that Temporal Power was, the recovery of which is no more seriously thought of in Italy than is the restoration of the British sovereign in New York. It is twenty years since Cardinal Hohenlohe wrote the memorable letter to Leo XIII in which he said: "God has so ordained that the Church can never again get back her temporal power. The salvation of souls requires that we resign ourselves to this fact, that we keep quietly within the ecclesiastical sphere, and perform charity by giving of our substance and by teaching the faithful."

But in fairness, we must repeat that Dr. De Cesare (who is, we believe, a Catholic) is never polemical; his skill lies in unfolding a series of moving pictures in which the reader sees for himself what was going on. To those who study the history of institutions dispassionately, as the naturalist studies the evolution of species, this panorama of the decrepitude and dissolution of the Papal institution may be recommended. Nero fiddled when Rome was burning. This is what Pius IX did on September 20, 1870, when the Italians were entering the Eternal City:

> At half-past ten the diplomatic corps left the Vatican. After their departure the Pope resumed his easy good humor, and seating himself at his writing-table, composed, in all tranquillity, a charade in three verses upon the word *tremare* (to tremble). One of his chief amusements was the composition of charades, which he thought of easily, and which were not difficult to guess. The "whole" of the charade of September 20 represented a weakness he did not feel in that moment. The charade was passed from hand to hand among the monsignori of the court.
>
> Il tre non oltrepassa il mio *primiero*,
> È l'*altro* molto vasto e molto infido
> Che spesso spesso fa provar l'*intero*.

Significant episodes of this kind, scattered plentifully throughout Dr. De Cesare's volume, make it not only very entertaining, but historically valuable. Occasionally, he stops for a moment to pass judgment. How profound he can be appears in the following summing up of the effect of the Roman environment on Italian political progress:

Rome has carried even into national life her keen and characteristic skepticism, before which the strongest impetus dies down, and the most rooted convictions yield to the temptations of opportunism, and, still more, to that law of adaptability before which the city, at all times, has bowed, and caused its conquerors to bow.

There is the text for a volume in those last two lines.

The translation has been well done by the practised hand of Miss Helen Zimmern; G. M. Trevelyan contributes a brief historical preface; and among the illustrations are portraits of Pius IX, Sermoneta, Mortara, Mérode, Antonelli, Lamoricière, Cardinal Altieri, and Prince Doria Panfili.

CURRENT FICTION.

Priscilla of The Good Intent. By Halliwell Sutcliffe. Boston: Little, Brown & Co.

This "Romance of the Gray Fells" has all that goes to make up an English rural novel: vast abundance of scenery, of dialect, of agriculture; a blacksmith's forge; a village "natural"; yeoman and shepherd; wild-rose maiden and moorland gypsy; faithful dullard and flighty woman-enslaver; the black fever, and many times four seasons—the whole lavishly decorated with bird, beast, and flower. The usual order of things, however, suffers reversal, in that it is the butterfly who undergoes regeneration, the hare who wins the race from the tortoise. The rustic folk of this book are endued with vigorous reality. One who reads may feel at moments an inclination to run swiftly up and down the landscape, yet the pastoral setting has charm and significance, the story holds interest in suspense to the last, and the tone never swerves from its high pitch.

Posson Jone' and Père Raphaël. With a New Word Setting Forth How and Why the Two Tales Are One. By George W. Cable. New York: Chas. Scribner's Sons.

With respectful sympathy one reads Mr. Cable's newly inscribed introduction to his Creole stories of Parson Jones, the Parson's "Colossus," Jules, Jules's Baptiste, the sweethearts of these last, the Judge, 'Sieur Davezac, *et al.* One easily agrees that to print these two familiar tales together "is a requirement of their veritable unity, their essential oneness, a genuine love-match, made in heaven, as lovers say, and bred of an affinity back of all time."

These admirable fragments of romance, finely colored throughout, albeit not pellucid, make a brave showing in their new holiday dress, gayly illustrated by Stanley M. Arthurs. One is glad to renew his friendship with Jules St. Anges, "that elegant little heathen"; with the delicious Creole maiden whom he loves and who loves him no less; with Abby's sugar-country bridegroom, in buckskin breeches above exquisite top-boots, "and a fawn-skin vest under his voluminous coat, giving an effect half-pioneer, half-Incroyable." Creole New Orleans has all but passed away, and even in the New Orleans of Jules St. Ange such a get-up as that of M. Dimitry Davezac, from the sugar-country, "was odd," confesses Mr. Cable. With the passing of an old-time provincialism, much needed in our monotonous land of literary prairie, departs a fine subject-matter for artist, literary or pictorial. Mr. Cable has worked in that field, and his delicately rendered studies and sketches we are proud to garner. Even our dislike of dialect—a relative dislike, after all—does not deter us from tasting his conversations with real pleasure.

Aunt Amity's Silver Wedding, and Other Stories. By Ruth McEnery Stuart. New York: The Century Company.

Interest never sleeps in Mrs. Stuart's stories. Each one furnishes an addition to the reader's circle of friends or cabinet of curios. The characters play their parts with such lively plausibility that one thinks of them as photographs and of the stories as folk-lore. In so doing, there may be an injustice to the author's powers of invention. She may have largely created her queer folk and the likenesses may be "hand-painted." If so, it is an historical imagination that has conceived them on lines truer than those of mere facts. Mrs. Stuart reads deep into the African nature. She sits at home within; she looks with her subjects' eyes and feels with their own feelings both their joys and hurts. And, more than that, she conveys a sense of pain in the laugh, which is the real note of the situation. Aunt Amity, planning her droll silver wedding, "Petty Larceny's" thieving little sweetheart, lying Levi, lawless "Free Jane"—each raises an inevitable laugh, but it is a laugh with a sigh at its centre, and a question peint at its end. No writer better blends the contraries into an impression which sinks deep without for an instant calling itself a lesson.

The Wiving of Lance Cleaverage. By Alice MacGowan. New York: G. P. Putnam's Sons.

To the highlands of Tennessee this story takes us, and under competent guidance. Back and forth through the Cumberlands and up and down Big and Little Turkey Track Mountains go we from cabin door to mountain cave, through woods and farm-lands to weddings, infares, and sorghum-makings. We form varied acquaintance with the mountain people and find them courteous yet austere folk.

The difficulties that beset Lance and Callista before they reached a happy married haven are of general human interest, but in the case of the hero, take on especial coloring from his temperament—which is distinctly a Tennessee mountain product. A mere Southerner might have been as gayly debonair, but hardly as dreamy a cloud-dweller. A Yankee might have been as flagrantly self-assured, but he would have been insufferable where the mountaineer's airy insolence only drew to him all men, women, and children.

With Callista it is otherwise. Hers is the case of many a spoiled beauty who does not know how to cook. Her regeneration by fire—the kitchen fire—is of no geographic significance; and her second desertion of her post seems more a means to prolong the story than an inevitable step. There are most excellent character portrayals all along the way, one of the prominent actors being a marvellous "gospel quilt."

Debit and Credit. By Gustav Freytag. Translated by L. C. Cummings. With a Preface by Chevalier Christian C. J. Bunsen. New York: William Abbatt.

This is not a new translation of Freytag's masterpiece, but a reprint of the original English version, first issued half a century ago, and still in no need of supersession. "Soll und Haben," published in 1855, was the most popular German novel of its day, and the English translation, though sold at 15 shillings, ran through six editions in two years. Its success was due in large part to its timeliness. It celebrated the emergence of the mercantile classes from a position of inferiority to one of influence and dignity in social and political life. Elsewhere, as in "Dombey and Son," published some years earlier, the note had been heard; but Freytag sounded it with an aggressiveness which caught the ear of Europe.

To the present translation, issued in 1857 by Constable, a long letter by the Chevalier Bunsen was prefixed. This is reproduced in the present edition. Bunsen warmly eulogizes the novel, and claims for it an epical quality which, he says, belongs to all romances of the first order. But it has also, he contends, a prophetic function: it conditions the future progress of Europe upon the fusion of the educated classes, their "just and Christian bearing" toward the working masses, and the final dominance of "the educated middle classes of all nations," not as constituting a democracy, but as advancing "along the legal path to a perfect constitutional monarchy." It is doubtful if we so clearly foresee the changes of the coming half-century. Certainly Freytag's story has a vitality unlikely to be recognized fifty years hence in the prophetic writings of Jack London, H. G. Wells, *et al.*

TWO NAPOLEON BOOKS.

The Exile of St. Helena: The Last Phase in Fact and Fiction. From the French of Philippe Gonnard. Illustrated. Philadelphia: J. B. Lippincott Co. $3.50 net.

Napoleon's Marshals. By R. P. Dunn-Pattison, M.A. With twenty illustrations. Boston: Little, Brown & Co. $3 net.

Napoleon showed his usual insight when he remarked to O'Meara: "People are curious to know the most trifling circumstances in the life of a man who has played a great part." The details of his life at St. Helena, his conversations, and supreme regrets, his *Passion* (as Heine would have said) under Sir Hudson Lowe, have all been set forth for eager readers in Napoleon's own memoirs and in the memorials of his fellow-exiles. They have also been told ponderously by Forsyth and charmingly by Lord Rosebery. M. Gonnard has been wise in refraining from trying to give another general picture of Napoleon as he was at St. Helena. Instead, he studies what Napoleon desired France to think he had been—in other words, the Napoleonic Legend. By legend we do not mean merely the popular exaggeration of his military glory, of his love for his soldiers, or of his part in the Civil Code. This exaggeration was inevitable, but, unless reinforced, would never have deeply influenced French politics.

The real Napoleonic Legend, so M. Gonnard thinks, was manufactured at St. Helena. By his very martyrdom on the lonely rock, Napoleon knew that he would arouse sympathy for himself and for the cause of his son. But by his writings he saw that he could do much more. So he began his memoirs. His method of work was to have one of his companions collect the facts, figures, dates, etc., for a certain period, and arrange them. Then Napoleon looked over these notes, saturated himself with his subject, and dictated very rapidly a chapter or the fragment of a chapter. This was only the first rough draft. From it there was made the next day a second version: fuller, riper, better arranged. This in turn was often many times corrected and altered by pencillings in Napoleon's own hand before it was given to Europe. With great industry and ingenuity, M. Gonnard has analyzed all these writings, as well as the memorials of Las Cases, Montholon, O'Meara, and the others, and finds a calculated purpose to establish in men's minds the following ideas in regard to Napoleon: that he was the convinced and disinterested representative of the ideas of 1789, but was forced by sheer necessity to assume dictatorial power; that he favored the idea of nationality; that he believed in God; that he wished for peace, but was constantly forced into war by the European coalitions; that all the members of his family were unusually talented and fond of him, but did him much harm through well-meaning errors. Such are some of the elements of the Legend. To each the author devotes a chapter, fortifying his opinion with countless quotations, and explaining away St. Helena utterances which seem in contradiction to the Legend. His conclusion is that the man of St. Helena equalled the man of Austerlitz. The Legend then passed to Europe, where it was powerfully swelled by Thiers and Norvins, by Béranger and Victor Hugo, and helped to seat a second Cæsar in the saddle. Yet it was one of the strange ironies of history that the crown which had been so patiently prepared by the captive of St. Helena for his own son was actually worn by the son of his hostile brother Louis. The great value of M. Gonnard's interesting study lies in the thoroughness with which he has analyzed the St. Helena literature and shown its relation to the later history of the Bonapartist party. One understands better how such a Roman Catholic as Montalembert could join hands with the Bonapartists in 1848, and how Napoleon III could say at Bordeaux: "The Empire means peace." The author's estimates of Gourgaud and Las Cases are much truer than Lord Rosebery's, and his bibliography much better than that in the Cambridge Modern History or that in the pretentious compilation of Kircheisen.

When Napoleon assumed the crown he revived the old title of Marshal of France as a means of binding more permanently to his cause the men whose swords had helped to establish his power. In the first batch of appointments he gave the baton to fourteen men, some of whom seemed scarcely to deserve it, and some of whom, on the other hand, like Masséna, felt it small honor to be "only one of fourteen." Later on, a dozen other marshals were created. Napoleon made them all feel plainly that they were his servants, created by him, and dependent on him. The title of marshal was merely a civil distinction "which gives you the honorable rank at my court which is your due, but it carries with it no authority. On the battlefield you are generals; at court you are nobles." Of each of these marshals Mr. Dunn-Pattison, late lieutenant of a Highland regiment and sometime lecturer at Magdalen College, has given brief, sharply-lined pen portraits, with many judicious military observations, showing independence of thought and no more than normal British prejudice. But it is a bit tiresome to march through all the Napoleonic wars twenty-six times in succession. To those readers who have small knowledge of Napoleonic military history many of the allusions and comparisons will lose their point; and those who know this period well will find here little that is really new.

Kashmir. Described by Francis E. Younghusband and Painted by Edward Molyneux. London: Adam and Charles Black; New York: The Macmillan Co. $6 net.

In this book the series of geographical volumes aptly described by the publishers as "Black's Beautiful Books," reaches what may be described as Himalayan heights of excellence. Here are exquisite colored pictures of the most beautiful country in the world, supplemented by a verbal description of Kashmir which includes the latest geological and historical data. The specialist will find here the gist of Stein's work and of the still more recent geological treatises of Burrard and Hayden, not mentioned only but discussed. Sir Francis Younghusband is himself no mean authority on the subjects he treats, though, curiously enough, for any save the most superficial reader the volume is logically to be read backwards. It ends with the beginning of things, some millions of years ago; then, retrograding through the pages, one comes to human history; until, finally, at the beginning, the author himself appears, and wanders through the "paradise of the gods."

The author is least at home in the historical background of his subject. Here one misses the little touches that show special knowledge. Thus it would not have been amiss, apropos of the bare allusion to saffron, to mention that in ancient days the saffron of Kashmir surpassed that of Balkh as much as the latter surpassed that of Persia. Again, in the author's justified sneer at a people capable of making a reputation only by making shawls, it might have been noticed that it was not shawls, but racehorses and literature, which made Kashmir famous two thousand years ago. To digress only for a moment—since these fourteen chapters have not been made a mere excuse for paint, but offer, to say the least, a useful condensation of data not easily to be obtained elsewhere—it is to be noted that Major Molyneux's pictures, seventy in number, are on a par with those of precedent works in this series. This is, indeed, saying too little. The scenery of Kashmir is unsurpassed, and the present artist has been equal to his opportunities. But, because of the obvious attractiveness of the illustrations, the text should receive no whit the less encomium. And a curious fact, often noticed before and corroborated by Sir Francis in this book, may be mentioned as a possible subject for examination at the hands of competent observers. Living as he does amid scenery sublime as well as beautiful, man in this "Land of the Sun" is the greatest coward on earth. Nothing is too ignominious for him; even in the presence of his wife or sweetheart the Kashmiran will burst out crying at the mere bark of a puppy. To make a sol-

dler of him is impossible. Though often a fine figure personally, he is unexcelled in shameless pusillanimity. This cannot be attributed to the effects of the religion of Buddha, since the Kashmiran has been free of that for a thousand years; nor to cruel treatment, for the Hindu of the Plains has suffered as much; nor to the climate, which is not very bad. Why is it (Sir Francis offers no explanation) that where every prospect pleases most, man is most vile? As for the Kashmiran's ethics, he is humane and kindly; but where morality demands courage, he is as he is, "having so great a respect for truth that he is unwilling to make common use of it."

Relics and Memorials of London City. By James S. Ogilvy. New York: E. P. Dutton & Co. $7 net.

The Private Palaces of London, Past and Present. By E. Beresford Chancellor. Philadelphia: J. B. Lippincott Co. $5 net.

Mr. Ogilvy's work has one advantage over most ornamental books, in that text and pictures, being from one hand, have a real relation to each other. All the buildings of the City chosen by him for illustration and comment were standing when the present century began, yet, as he remarks, a considerable number of them have already been pulled down or altered, so that in a few years his book will not be so much a present record of the past as a past record of a greater past. In general, the anecdotes or fragments of history given by the author to vivify his memorial buildings are pretty obvious, but that, for his purpose, is scarcely to their disadvantage. The pictures, sixty-four in number, are full-page (quarto) color plates, and are sufficiently realistic to recall the actual scenes to any one familiar with the City streets and lanes. They are artistic, too, save that they suffer, as do almost all color prints, from too elaborate shading and blending. As the process of printing now stands, the attempt to reproduce complicated shades and blends generally results in muddiness. This criticism, however, is directed more to a whole class of books than to the particular volume under review. Mr. Ogilvy has succeeded in making an attractive combination of description and illustration.

Mr. Chancellor writes not as a dilettante of the picturesque, but as a veritable antiquary, and his latest book on "The Private Palaces of London" is a work substantial both in form and matter. His accounts of the various houses are orderly bits of historical writing, although the lighter entertainment of anecdote is by no means neglected. Between the lines one can read of the great pageantry and the great ambitions of life for more than two centuries. The old Duchess, lying in Marlborough House and exclaiming, when told that she must be blistered or die, "I won't be blistered and I won't die," seems but a tragic and articulate symbol of that greatness. In one point of taste we take leave to differ from Mr. Chancellor. Speaking of the changes that have been made in the drawing room of Chesterfield House since its stately decorum under the great Lord Chesterfield, he remarks:

> What has since been added by the care and discrimination of the present owner gives just that touch of comfort and homeliness which is more characteristic of our day than it was of those of the earlier Georges, when the great ones of the earth seem always to have existed *en grande tenue*. . . . Now the magnificently decorated walls and ceiling look not down on an almost empty room, with chairs and settees set formally against the walls, and perhaps a solitary escritoire or commode standing isolated in its vast expanse, but on a room filled with rare French furniture; tables loaded with costly bric-à-brac; chairs covered in valuable tapestries, which seem to invite familiar intercourse; cabinets filled, etc., etc.

With due respect we submit that a glance at the picture of this overloaded drawing room makes one sigh for a simplicity that inclined even to rigidness; not in this china-shop can the true graces of conversation ever flourish. As for mere comfort, the great Chesterfield sought that and but for failing health found it in the library with its famous motto and pictures.

The forty-four photographic illustrations of Mr. Chancellor's volume are, for the still existing houses, chiefly of interiors. That is no doubt right, as the interiors are hidden from the common sight-seer; yet he would have added to the interest of his work if he had given more views of exteriors also.

Drei Jahrhunderte deutschen Lebens in Amerika. Von Rudolf Cronau. Berlin: Dietrich Reimer (Ernst Vohsen).

Undeterred by the recent publication of Georg von Bosse's "Das deutsche Element in den Vereinigten Staaten," and inspired, very likely, by his own "Amerika: die Geschichte seiner Entdeckung," Rudolf Cronau has undertaken, in a large-octavo of 640 pages, to sketch the fortunes and misfortunes, the endeavors and accomplishments, of Germans in the United States during the past three hundred years. With more system and with far more thoroughness than Von Bosse, he divides his work into two main parts, the first tracing "the Germans" in America during the Colonial period, the second following "the German-Americans" in their participation in the development of the Union. Since 1885, a resident in and traveller through the United States, and the author of several works in German and English on America, even including a severe criticism of forest mismanagement ("Our Wasteful Nation," 1908), Cronau comes to his work fairly equipped and evidences an intelligent understanding of most of the problems before him. There are interesting notes on the first *Flugblätter* regarding America which drew the earliest Germans to us, and equally interesting information, not so commonly possessed, about Hermann of Virginia and New Amsterdam, "the first German to make American maps," and about Lederer, the first German explorer of America. There are also chapters on the various communal sects, such as the Mennonites, Tunkers, and Herrnhuters, and on the exodus to Pennsylvania and elsewhere of the natives of the Pfalz. In rather strong colors, perhaps, he portrays the Germans who fought in the Revolution and whose bravery and intelligence have long been recognized by American historians. The political exiles of '48, and the good they brought to our country are recognized, Carl Schurz standing conspicuously, almost alone, in the chapter on the German in American political life. Two hundred and twenty-nine pages are devoted to the part taken by Germans in American culture—to their influence on schools, agriculture and forestry, industry, commerce, engineering, journalism and authorship, medicine, music, painting, sculpture, architecture, and the theatre. In the discussion of the *Turnverein* much is claimed that should not be forgotten by Americans, but too little is allowed by the author to the overpowering influence of English sport on physical culture in America. The Sources for a History of the German Elements in the United States should prove to be a chapter of particular value—timely, too, now that Professor Learned is at work for the Carnegie Foundation on an exhaustive research along the same lines. Two hundred and ten exceptionally good illustrations, from photographs and drawings, make the work the best of its kind yet produced.

The shortcomings of the book are emphasized by its general excellence. There is, we think, a little too much attention in text and illustration on the commercial aspect of German successes, and for a true history of the German in the New World, there should be a bold statement, here and there, of *mis*doing on the part of an occasional Altgeld, Schmidt, and Hummel, if for no other reason than as a salutary correction of the idea all too prevalent in Germany that the German element has always been the best in America. The most serious defect in the volume, however, is the omission of notable names. Among those conspicuous by their absence, are Dr. Frederick W. Holls; Isaac Thomas Hecker, the Paulist Father of Brook Farm celebrity; Lenau, the poet, who roved the Western plains; the Tafels,

and Dr. Gescheldt of New York; Dr. Julius, of Hamburg, the traveller and translator of Ticknor; and Von Schlagintweit, the explorer of the Pacific Coast. Much is said of Busch, the St. Louis brewer, but nothing of Louis Soldan, the head of the city schools. The accomplished Fräulein von Wenckebach of Wellesley receives due credit, but there is no mention of her accomplished colleague, Fräulein Müller. These names come to the reviewer almost instantly, and arouse the suspicion that the total number of omissions may be very great. And this suggests the question: Now that several attempts have recently been made by private individuals, and at much expense, to write and publish the history of the Germans in America, and always with imperfect success, is it not time that representative German societies should combine, once and for all, to undertake an official record covering this ground? Only by such a thorough investigation, scarcely to be expected from a private author or publisher, can we hope ever to have a full and satisfactory history of German life and culture in America.

Notes.

Frederick A. Stokes Co. announce for early publication "The Child's English Literature," by H. E. Marshall, a book written primarily not for use in the schools, but for home reading. An attempt has been made to bring within the ken of children something of the actual relation between history and literature.

On December 28 the University of Chicago Press will issue "The Treatment of Nature in English Poetry," by Myra Reynolds. Not confining herself narrowly to the subject suggested by her title, Professor Reynolds will include in the book a chapter dealing with the art of landscape and with landscape in English portraiture.

J. M. Barrie wrote for the *Westminster Gazette*, last May, an article on George Meredith, which, among the many essays inspired by the novelist's death, is one of the very few worthy of preservation. The Chiswick Press is to reprint Mr. Barrie's article on hand-made paper, and the booklet will be published by the Messrs. Constable (London).

The Constables are, too, the publishers of the anthology announced long since, "In Praise of Oxford." The volume will be published early in 1910, and is the result of collaboration by Thomas Seccombe and Spencer Scott.

To the Arthur H. Clark Company, Cleveland, we look for the new and first-published biography of Timothy Flint: pioneer, missionary, author (1780-1840). The book is by Prof. J. B. Kirkpatrick of Washburn College, Topeka, who has, it is said, brought to light a great deal of new material of more than purely personal significance.

W. Dawson Johnston, librarian of Columbia University, is preparing for the United States Bureau of Education a report on special collections in libraries in the United States. The publication is to be a record of all collections in public libraries which are of extraordinary value by reason either of unusual completeness or rarity.

Eight volumes of verse in one week is a publishing record, or very near one; and is scored by Richard G. Badger of Boston. The list includes W. H. Venable's "Floridian Sonnets"; O. C. Auringer's "Death of Maid McCrea"; "The Oak Amongst the Pines," by J. D. Henderson; Ernest Powell's "Poems"; T. C. Whitmer's "Symbolisms"; Effie Smith's "Rosemary and Pansies"; Wilson Jefferson's "Verses," and "The Silver Lining," by Nelson Glazier Morton.

Madison C. Bates is preparing a bibliographical study of the poet Cowper, and would be glad to receive communications from collectors and students of the material. He may be addressed at No. 457 West One Hundred and Twenty-third Street, New York city.

At once the poorest thing and the "best thing" in the volume of "Milton Memorial Lectures, 1908: Read Before the Royal Society of Literature" (Frowde) is the lecture by the Rev. H. G. Rosedale, D.D., upon Milton's religion and polemics. We prefer to consider Dr. Rosedale's offering rather than the paper by William Henry Hadow on Milton's knowledge of music, Professor Saintsbury's on "Milton and the Grand Style," or Professor Dowden's on "Paradise Regained." For even the best of these is merely a collection of "remarks"; and the whole book is ludicrously inadequate to its occasion. What will most interest the student of Milton is, however, likely to be Dr. Rosedale's cool assumption of the poet's authorship of the "Nova Solyma" (p. 123); or his reference to Natban Drake—b. 1766; d. 1836—as a writer of Milton's period (p. 133); or his allusion (p. 131) to Savonarola as having lived about the year 1545; or his casual grouping (p. 118) of "Spenser, Giles, and Fletcher." We pass over errors in his Englishing of foreign tongues; perhaps we should not expose, either, his quotation (p. 160) of Milton's Latin preface to "Samson Agonistes": "Tragœdia est imitatio actionis seriæ, etc., per misericordiam et metum perficiens talium affectuum lustrationem," as original with Milton, obviously unaware that it is a literal translation from Aristotle's "Poetics." Though in these few sentences the tale of Dr. Rosedale's blunders is by no means exhausted, his qualifications for treating the subject undertaken are, perhaps, sufficiently suggested. This volume is worth preservation, however; it contains reproductions of four excellent portraits.

In "Romantic Germany" (Century Co.) Robert Haven Schauffler fights constantly against the dulness that pervades so many modern books of travel, but not quite victoriously. Again and again he endeavors to bring his own personality into his descriptions, yet somehow that personality melts vaguely away like the "Eitel Schaum" of Heine's poem. Perhaps no writer, whatever the charm of his style, could manage gracefully the mass of material which Mr. Schauffler has brought into his book. Twelve ancient and opulent cities the writer has chosen, from Danzig to Rothenburg, from Berlin to Hildesheim, and for each he tries to be, literally, guide, philosopher, and friend. The guide repeatedly overwhelms the friendly philosopher, and the author's impression is lost under the many names of streets and buildings. It has been said that one influence of Stevenson was to make even the suburban journalist write with something like ease. Perhaps another of Stevenson's influences was to infuse clearness and charm into books of travel. Mr. Schauffler, though undoubtedly a Stevensonian and nice in his choice of words, leaves everywhere a blurred impression, as if he had been unable to escape the proverbial heaviness of the land he studied. Sixty-four full-page illustrations by a number of artists embellish this volume, and typographically it leaves nothing to be desired.

There is a good deal of keen and thoughtful criticism in Alexander Francis's "Americans: An Impression" (Appleton). The author, a Scotchman long resident in Russia, and approaching his task with a generous cosmopolitan detachment, seems to have given most of his one year in this country to a study of such social questions as foreign immigration and race feeling, the work of university settlements, and higher education. While in all these matters he is confident that we shall come out right in the end, he finds in our politics an ominous trend towards an "elective despotism"; though his view of Taft's election, "as a guarantee that the cure of the evils of democracy will be sought in more, not less, democracy," plainly belongs to the period before the enactment of the Payne-Aldrich tariff. Of a socialistic overturning, however, he has no fear, partly because Socialism means so many different things to the people who use the term, and partly because incoming foreigners show rapid assimilation of American ways, including the deliberate restriction of families. There is special praise for the Jews, in whose intellectual superiority Mr. Francis seems heartily to believe; and he constantly recurs to the evidences of their gain in commercial, educational, and philanthropic influence. Yet he recognizes the tendency of Jews of the second generation to depart from their historic religion without embracing another; and sees in this tendency a moral problem with which the leaders of the race cannot too soon concern themselves. Over American colleges and universities he is not enthusiastic, though his strictures are directed chiefly to fraternities and clubs, athletics, coeducation, and the pervadingly secular atmosphere. To have written a book of "impressions" without mentioning hotels, or railway trains, or young women's manners, is in itself a feat; but this, also, Mr. Francis has done, and to the immense advantage of his suggestive pages.

The Riverside Press has printed for the Essex Book and Print Club of Salem, Mass., a small edition of the "New-Englands Plantation with The Sea Journal and Other Writings," by the Rev. Francis Higginson, "First Minister of the Plantation at Salem in the Massachusetts Bay Colony." The tract called "New-Englands Plantation," published in London early in 1630, has not been reprinted since 1846, and contains the earliest printed account of the colony established by Endecott in 1628, at Nelhum-

kek, now Salem. A quaint statement of the natural conditions surrounding the new settlement is also preserved, the narrative presenting, in the phraso of the original, "a short and truo description of the eommodities and discommodities of that country." The tract and its title-pages are reproduced hero in facsimile of the *editio princeps;* too much cannot be said of the excellent presswork and paper whieh go to make this volume, the first of the Essex Book and Print Club's puhlications, a reprint which the collector of Americana will havo every wish to own.

In the preface to the English edition of his "Life of Joan of Arc" (John Lane) Anatole France had an opportunity to reply to his critics, and chiefly to Andrew Lang. The amazing softness of M. France's answer has not dissipated Mr. Lang's wrath: "My English critics have a special claim to my gratitude. To the memory of Joan of Arc they eonsecrate a pious zeal which is almost an expiatory worship. Mr. Andrew Lang's praiseworthy scruples with regard to my references have caused me to correct some and to add several." The corrections have not been applied to the apparently baseless charges that the Maid was subject at Vaucouleurs to "les outrages de la garnison," that she feigned ecstasy to deceive the King, and that her squire d'Aulon was a ereature of La Trémoïlle, though a qualification is made in a note on the last matter which destroys the meaning of the text. The purely clerical errors have been eorrected, but such slight changes and additions as have been noted show that M. France is of the same opinion still. The translator, Winifred Stephens, has done her work well, though this hook gave her an exceptionally difficult task. The great charm exercised by the original depended largely on the purely technical skill with which M. France developed a style to suit his purpose, a style partly archaic and naïve, hut never labored. The English version imitates this manner pleasantly enough, but uses as a means a somewhat wearisome parataxis. The hook contains some excellent illustrations, which were not included in the French edition.

"The Last Journals of Horace Walpole, During the Reign of George III, from 1771-1783," were first given to the world, in 1858, by Dr. J. Doran, with notes after the manner of that popular editor and eollector of literary anecdotes. A new edition in two agreeahle volumes is now put out hy John Lane Co., with an introduction and some revision hy A. Francis Steuart. These journals are a continuation of Walpole's "Memoirs of the Reign of George III"; and, if they lack the general finish and, above all, the clean-cut portrait-characterizations of the memoirs, they have interest of another sort to compensate. The central theme is the marriage of the Duke of Gloucester, hrother of the King, with Lady Marion Waldegrave, Walpole's niece, and the struggle to get the marriage acknowledged by the court. There is also a running account of Parliamentary doings during those stirring years, which include the American war and the successful contest with the court party. The present edition eontains a number of portraits reproduced from contemporary pictures.

The Manorial Society of London has issued as its fifth publication the text of a manuscript found in the Harleian eollection in the British Museum entitled "A Mannor and Court Baron." The work is edited by the antiquarian, Nathaniel J. Hone, and a preface has been written by J. Samuel Green, a barrister member of the society. It is a legal treatise dealing chiefly with the functions and proeedure of the Court Baron, and is of date probably not later than the reign of Elizabeth. It is eouched in technical phraseology intelligible only to an expert in legal terms, and is written in a style that is often uncouth and confused. We cannot see that it adds anything to our knowledge of the history or constitution of the Court Baron, and it seems to be of little worth either to the lawyer or to the historian. The editors have done nothing to lighten the darkness of the text, for Mr. Hone has contented himself with securing an accurate reading, and Mr. Green with eontributing a meagre and elementary essay on the manor in law and history. The treatise is sufficiently obscure to render eommentary and footnotes eminently desirahle, but neither has been furnished by the society.

The fifth volume of "The New Schaff-Herzog Encyclopædia of Religious Knowledge," to be completed in twelve volumes, follows its predecessor after an interval of three months. (New York; Funk & Wagnalls Co.). Articles from "Saint Goar" to "Innocent" are found in the present issue. None of the contributions is lengthy or exhaustive, hut most of them are adequate for a book of convenient reference, and the work as a whole is marked by sound scholarship. In the present volume Prof. George H. Gilmore adds to his former valuahle contributions articles on "Hammurahi and his Code," "Herod and his Family," and "The Hittites." Of exceptional interest are articles hy Prof. Immanuel Benzinger on "Hehrew Handicrafts" and "Hunting among the Hebrews." The topics in the department of doctrinal theology, assigned to Prof. Charles A. Beckwith, are well treated, in striking contrast to the mediævalism exhibited by Prof. B. B. Warfield in his discussion of "Imputation." It is unfortunate that a moderate and cautious description of the historical view of the "Hexateuch," hy Prof. Hermann L. Strack, should be followed in the same article, without adequate warning of an entire change in the point of view, hy a reactionary defence of the ahandoned positions by Prof. J. D. Davis. Since the bihliographies in this encyclopædia are usually excellent, it is surprising to find no mention of Prof. George H. Palmer's edition of George Herbert in the title hearing his name, and no indication of the English translation of Prof. Wilhelm Herrmann's "Der Verkehr des Christen mit Gott," a work which has had wide circulation in its English form. On page 463 mention is intended of the Rev. Dr. S. D. McConnell's term "immortahility," hut the word is printed "immortality."

Albert M. Martinez, sometime Under-Secretary of State at the Ministry of Finance of the Argentine Republic, and Maurice Lewandowski, doctor in law, are the authors of the study of "L'Argentine au XXe siècle," which is now issued in its third and very much enlarged edition (Paris: Colin). The volume contains an economic examination of Argentina as a great exporter of wheat, and has an introduetion hy Charles Pellegrini, former President of the republic, and a preface by Emile Levasseur, member of the French Institute. In this series are volumes on "Le Brésil au XXe siècle," hy Pierre Denis, and on "Les Etats-Unis au XXe siècle," by Pierre Leroy-Beaulieu.

Prof. Erich Schmidt's address on "The Study of Literary Personality," delivered on October 15 at the oecasion of his officially assuming the Rektorat of Berlin University for the current academic year, is a confession of faith which literary historians of whatever ereed will gladly welcome. His protest against the "exhaustiveness of ruhbish gathering," which pseudo-philologists so often have mistaken for scientific accuracy, is most refreshing. His appreeiation of Taine's method of literary analysis according to the three principles of race, *milieu*, and age, is a timely rehuke administered to the recent sensational detractors of the scholarly reputation of the great French critic. And Erich Schmidt's own summing up of the literary personality under the three heads of "das Ererhte, das Erlebte, das Erlernte," is a remarkahly liberal and fair-minded application of maxims forcibly preached, if not always wisely practised, hy his master, Wilhelm Scherer. Altogether, this address gives assurance—if there were need of it—that the new rector magnificus will conduct the coming juhilee of Berlin University in a spirit worthy of the great traditions of German scholarship.

Dr. Wiegand, head of one of the departments of the Royal Museum in Berlin, has entered into a compact with the Prince of Samos, according to which the Royal Museum will for ten years enjoy the privilege of making archæological investigations in the island of Samos. The expenses will be horne by wealthy art enthusiasts. Dr. Max Oelhäuser has already contributed the sum of 20,000 marks for the purpose of laying hare the heraion.

Strange enough, when one recalls how Scherer, in edition after edition of his "Geschichte der deutschen Literatur" suggested more search for antecedents in Goethe's prose, no one seems previously to have accomplished what Eugen Wolff, the Kiel Shakespearean, now presents in his substantial volume modestly entitled "Mignon: a Contribution to the History of 'Wilhelm Meister.'" (Munich: C. H. Beck'sche Verlagshuchhandlung.) Something had been known of a real forerunner of the little maiden who won Goethe's heart, supposedly on the mountain pass leading into fruitful Italian valleys; but Professor Wolff was first to follow her footsteps through Cassel and Frankfort as she played her part—for all we know, before Goethe's very house—and to learn her real name: Elizaheth Schmeling-Mara. It was Professor Wolff's good fortune, also, aided hy the Leipzig Museum and hy his publisher, to get together a sketch of Elizaheth, and an oil portrait of Karl Philipp Moritz, Meister's Doppelgänger.

The Nohel prizes will be distributed this year as follows: For chemistry, Prof. Wilhelm Ostwald (Leipzig); for medicine, Prof. Emil Theodor Kocher (Berne); for literature, Selma Lagerlöf, the Swedish novelist. The prize for physics will be

divided between Guglielmo Marconi and Prof. Ferdinand Braun (Strasburg), and the Peace Prize will be shared by Senator the Baron d'Estournelles de Constant, president of the French parliamentary group for international arbitration, and M. Beernaert, sometime Minister of State and Belgian representative at the last Hague peace conference. This last prize, which was, three years ago, voted to Theodore Roosevelt, has been awarded annually for nine years, and has on five occasions been divided. The prizes amount to about $40,000 each.

Leonard Augustus Jones, for twenty years (1884-1904) associate editor of the *American Law Review*, died December 9 in Boston. He was born at Templeton, Mass., in 1832, and was graduated from the Harvard Law School in 1858. Since 1898 he had been chief justice of the Massachusetts Land Court. His writings include legal treatises of recognized value.

The Rev. John McDowell Leavitt, formerly president of Lehigh University, at South Bethlehem, Pa., and of St. John's College, Annapolis, died in the latter city December 12, in his eighty-sixth year. For several years after his graduation from Jefferson College (1841), he studied and practised law. Later, he entered the theological seminary at Gambier, Ohio, and was ordained in the Protestant Episcopal Church in 1848. Subsequently he held a professorship in Kenyon College and later in Ohio University and in the Reformed Episcopal Theological Seminary (Philadelphia). After identifying himself with the Reformed Episcopal Church, Dr. Leavitt went to Lehigh University, and for many years was president of that institution. He was, also, editor and publisher of the *Church Review* and the founder and editor of the *National Review*. His writings comprise "Reasons for Faith in the Nineteenth Century" and other religious works and a number of poems.

Science.

The Place of Animals in Human Thought. By the Countess Evelyn Martinengo-Cesaresco. New York: Chas. Scribner's Sons.

The Countess Cesaresco has here thrown new light upon one of the oldest of subjects. The ordinary reader, perhaps, will not be attracted to the perusal of this book by the title alone. It is, nevertheless, safe to say that few intelligent persons will begin the reading without pushing through to the end. From the ancient Vedic theory of "soul-wanderings," in which one follows the procession of the human soul from death to life through sundry animal forms, to the ideas of Descartes and Darwin, and the kindly moderns who would apply humane principles to the lower animals, the subject is treated with a degree of learning and with a clarity and sprightliness of style that hold unflagging attention.

The Vedic theory that animals, like men, enter at death a soul-world in which they preserve their identity, does not commend itself strongly to modern conceptions. Yet to Asiatics the destruction of spirit seems quite as impossible as is the destruction of matter to a nineteenth-century biologist. The horse and the goat that were immolated at a Vedic funeral were intended to precede and announce the coming of the soul of the deceased. Therewith went the idea that the human spirit would need the services of its animal companions in the spirit-world, and would there be served by them. This, of course, implied the immortality of the animal as well as of the human soul.

The Suttee, which withstood the progress of Christianity and modern Western ideas so strenuously, had its origin in the wish that the wife might accompany and serve her husband in the future life, as in the present. As illustrating the wide diffusion of like ideas, and the strong hold that it takes on primitive minds, our author cites the case of an old Irish woman, within her own knowledge, who, on being remonstrated with for having killed her husband's horse, replied. "Do ye think I would let my man go on foot in the next world?" Coming down to the Sutras and Upanishads, one finds the belief expressed therein to be that the same soul in its wanderings may occupy the body of a Brahman, a worm, an insect, a begging tramp, a dog, an elephant, a cow. The Grecian philosopher, Pythagoras, who interpreted transmigration to European minds, and who may have borrowed it from Egypt, believed that he had been one of the Trojan heroes, and at once recognized his shield among the votive weapons hung up in the temple of Juno. Lucian's satire upon the Pythagorean theory, which is better known to modern readers by the use which Erasmus made of it with such gusto, presented a Pythagorean cock which had been successively a man, a woman, a prince, a subject, a fish, a horse, and a frog. This varied experience was summed up in the judgment that man was found to be the most wretched of all creatures! For all others patiently grazed within the allotted enclosures of Nature, while man alone broke out and strayed beyond those safe limits. Doubtless, many of Lucian's Roman admirers eschewed the admirable moral, and held the doctrine thus parodied as the height of absurdity. But in the essential feature of a transmigration of spirits, it still appeals to a great multitude of human beings, as a most serious truth.

After Pythagoras, the Greek Empedocles thought that he had passed through many forms, among others those of a bird. Could such fancies have originated from dreams? This reviewer recalls how the dream of flying like a bird came to him night after night, and persisted during much of his youth. He would awake from sleep with the impression deeply set in his mind that he had been a flying creature. How easy the step from this vision-estate to the belief, at last, in a past where one had wandered in a bird-soul. That some such conceptions as the above had decided lodgment among early Christians is manifest not only from the views expressed by Origen, but by the deliverance of the Council of Constantinople, A. D. 543: "Whosoever believes in the fabled prior existence of souls, let him be anathema!"

Not the least interesting part of this volume is that which relates to the Christian period, and the strange views held in various parts of Christendom about animals. The attractive character of St. Francis of Assisi, the saintly enthusiast who preached to the birds, his "brothers," and of many another recluse, driven by irrepressible longing for society to friendly companionship with animals, presents one side of the subject. On the other side, the author has uncovered no less than 144 cases of the judicial and ecclesiastical trial of various animals for alleged misdemeanors, dealing with them as though they were moral and responsible creatures. Think, for example, of the formal arraignment and deliberate and serious trial of a fly, with all the solemnities of a judicial tribunal.

In summing up, one may commend such writing as is found in this book for its influence in giving to our animal associates a fairer chance in life. Whatever one may think of the doctrines of some of the Oriental religions anent animal immortality and transmigration of souls as here unfolded, it is certainly true that many Western Christians have much to learn from Asiatics in the matter of humane treatment of beasts.

Although Charles B. Cory's "Birds of Illinois and Wisconsin," in the Zoölogical Series of the Chicago Field Museum of Natural History (IX, 131), deals avowedly with the birds of but two States, its usefulness is far wider than the title itself suggests, as many of the 398 species of birds of which it treats are found throughout the East and South. This volume gives full descriptions of the plumage of these birds, their nests and eggs and geographical distribution, together with more or less brief biographical accounts. This material has been so painstakingly treated that there is very little criticism to offer. Two hundred and fifty of the 750 pages are devoted to keys to families, genera, and species, and most of the rest of the book to the systematic account. At the conclusion is a careful key to the eggs of the birds breeding in Illinois and Wisconsin, a bibliography, and an index. The keys are, on the whole, not new, but adapted from the author's "Key to the Birds of Eastern North America." Perhaps the most important part of the whole is the illustrations, which include figures not only of the structural parts such as wings, bills, and feet,

of almost every species, but also half or full-length drawings of the entire bird.

The dedication of the new building of the Harvard Dental School occurred December 8, the exercises being held in Sanders Theatre. The building is in Longwood Avenue, Boston, adjacent to the Harvard Medical School.

Charles B. Withington, inventor of the first automatic grain binder, died December 12 at Janesville, Wisconsin, in his sixty-third year. Early in the sixties he began to experiment upon an improved grain binder; and, in 1870, he obtained a patent for an invention which has revolutionized the agricultural industry.

Drama.

The Piper. By Josephine Preston Peabody. Boston: Houghton Mifflin Co. $1.10 net.

This is a little poetic play of uncommon quality, having distinct literary and dramatic value. It is a new and delicately imaginative version of the old Pied Piper of Hamelin legend, enriched with a romantic love story, much tender and humane sentiment, the grace of true childhood, and an inspiring moral. The piping hero now appears in the guise of a vagrant idealist, a strolling mummer filled with a passionate worship of nature, children, and all wild, innocent creatures, and a consuming hatred of the greed, hypocrisy, and social and religious intolerances that kill the joy of life. His mission is to give freedom to all caged things, and his spell is love. The story is told with admirable simplicity. It is genuinely and consistently, if never brilliantly, poetic. The rats and mice have been charmed away before the first curtain rises. Action begins when the Piper, Reynard the Fox, in a band of wandering pantomimists, is refused his promised guerdon. Kurt, the Syndic, and Jacobus, the burgomaster, denounce him as a masterless dog, incapable of civil rights, outlawed, and powerless. They give the credit to St. Willibald, holding that a mass is a more dignified and less expensive way of discharging the debt. Thereupon the Piper, while the parents are in church, lures away the children, as in the old tale, with the Syndic's crippled stepson, Jan, at their head, to an ancient cavern in a haunted glen, whither, he knows, the superstitious crowd will not dare to follow. There he feeds and entertains them in a charming scene. When the town authorities, including the priest, decide that the mayor's daughter, Barbara, must be made a nun, as a sacrifice to an offended Heaven, he rescues her with his magic pipe, and restores her to the lover of her choice, the handsome sword-swallower, Michael. The children, he swears, shall never be given back to be reared in the grinding, soulless Hamelin tradition; but in an encounter with Veronica, the stricken mother of the crippled Jan—a finely imagined and written scene of tense spiritual conflict—he realizes that her indomitable love, rooted in patience and self-sacrifice, is loftier and more potent than his own, and he abandons his vengeance. With this enforcement of a high and wise morality, the way is opened to a logical and happy ending. The Piper leads the children home, recalls the now dying Veronica to life and happiness by the gift of her lost boy, and then, amid general rejoicings, departs to pipe elsewhere.

Properly acted upon the stage, the play could scarcely fail of popular success, for it makes a strong appeal both to youthful sympathies and mature intelligence. But the dainty bloom of it would almost inevitably perish in a merely commercial production. It well deserves, however, the earnest consideration of the directors of the New Theatre. A better Christmas piece it would be hard to find.

The "Penelope," of W. S. Maugham, which was produced in the Lyceum Theatre on Monday evening, is a very light piece, more nearly allied to farce than comedy. It is like other inventions of the same author, smartly written in places, and it contains some ingenious and amusing situations, but drags occasionally and reveals many signs of haste and carelessness. Of dramatic substance it has little, and such moral as it implies is of doubtful truth or wisdom. Briefly, it is the tale of a loving wife, who re-wins an errant husband by pretending an indifference which she does not feel. Her final victory is due clearly to theatrical predestination, not to any logic arising from the facts. The whole scheme is deficient in reality and credibility, but there are some very funny scenes, notably one between the rival women, in which the injured wife routs her adversary in most entertaining fashion. But Mr. Maugham's humor is apt to be of a somewhat cheap and common kind, and sometimes is not altogether free from a tinge of vulgarity. The piece was only moderately successful with a first-night audience, but it is only fair to say that it might easily have been much better acted. That sprightly performer, Miss Marie Tempest, had, virtually, to carry nearly the whole weight of the performance upon her own shoulders. Her method does not vary much. To see her in one piece is to see her in all, but she is a neat workwoman, and her mixture of archness and audacity, her mercurial movement, her power of mischievous suggestion, and her mock sentiment rarely fail to excite the laughter, which is her main object.

Dustin Farnum is to be the "leading man" of the Hackett Theatre production of "Cameo Kirby," the engagement beginning December 20. This is the play of New Orleans, in the early part of the last century, which Booth Tarkington and Harry Leon Wilson wrote around the character of a gentleman gambler. The piece was produced in Chicago early last spring, and has been on its travels ever since.

Unwin is the London publisher of "Napoleon—A Historical Tragedy," by Algernon Boyesen. The piece is to be played this season in several Continental cities, including Paris. It is written by a fervent admirer of the Emperor, and "aims," we are told, "rather at poetic truth than at historic realism." If we are to have more Napoleon dramas, this is, by all means, the preferable approach.

Music.

Stories from the Operas. By Gladys Davidson. Philadelphia: J. B. Lippincott Co.

A Guide to Modern Opera. By Esther Singleton. New York: Dodd, Mead & Co.

It is commonly supposed that most people go to the opera solely to hear the music. If that were so, how account for the dozens of boys near the opera-houses crying: "Librettos, only fifteen cents; cost you a quarter inside"? and how account for the large number of books telling the stories of the operas? Every year brings new ones, with new editions of the old (in one case, the nineteenth). Evidently, the change in the style of opera, becoming less ornamental and more dramatic, has made music-lovers more interested in the plots. As a matter of fact, not only in the case of Wagner, but of such Italian operas as "Tosca" and "Madama Butterfly," it is impossible to enjoy the music fully unless one knows the substance of the famous plays on which they are based.

Even the older operas, in many of which the plot merely served as an excuse for the tunes, are coming in for their share of attention. This accounts for the appearance of a book like Gladys Davidson's. It is concerned with a dozen operas, all but two of which ("Otello" and "Romeo and Juliet") belong to the old style. The others are "The Lily of Killarney," "Lucia," "Lucrezia Borgia," "The Daughter of the Regiment," "The Masked Ball," "Ernani," "The Barber of Seville," "Lurline," "I Puritani," and "The Merry Wives of Windsor." This last and "The Barber of Seville" may be taken as links between the old and the new. Short biographic sketches of the composers are included in this volume.

As the title indicates, Miss Singleton's book is concerned with operas of our day, in which the libretto is often almost if not quite as important as the music. Here we find twenty-six favorites of the hour, including "The Bartered Bride," "La Gioconda." "Otello," "Tosca," "Madama Butterfly," and particularly also the operas which owe their present vogue in this country to Oscar Hammerstein, among them "Thaïs," "Le Jongleur de Notre Dame,"

"Louise," "Pelléas et Mélisande," and "Salome." Even Strauss's latest work, "Elektra," is included, although it is not to be produced here till next month. One could not be more contemporary. Miss Singleton is an expert writer, and she tells the stories clearly and with abundant detail. Pictures of a dozen opera singers adorn the volume.

A prima donna war is raging at the Metropolitan Opera House over the rôle of Tosca in Puccini's opera. When this work was first produced, in 1901, the titular part was sung and acted by Milka Ternina with a considerable display of temperament. Some years later the part was assumed by Emma Eames, who lent it the aid of her beauty of person as well as of voice, and surprised every one by the unexpected realism of her acting. This year she is not a member of the company, and three singers are struggling to be her favored successor. Geraldine Farrar had the first chance. Nervousness marred some of her vocal measures, although for the most part she sang the music beautifully and—what is more important still in this opera—emotionally. In youth and beauty supreme, she also surpassed her predecessors in naturalness of action, and particularly in the fascinating variety of facial expression. In these respects she vividly recalled Sarah Bernhardt. On Saturday night came Tosca number four—Olive Fremstad—another woman beautiful to behold and to listen to. She was far better vocally than in her acting, which was crude and unsatisfactory, especially in the matter of facial eloquence. These Tosca experiments have their chief value in the demonstration of the great importance of facial expression in modern operas, especially those of Puccini, which are based on famous plays. Miss Farrar plays the rôle again to-morrow night, and later Mme. Destinn is to assume it.

Gustav Mahler is the lion of the day in the local concert world. The reconstructed Philharmonic Orchestra plays under him as it never has played in its history. It is worth while to make a long journey to hear one of these concerts. The programme is immaterial. Mr. Mahler has made a Bach suite the sensation of the hour! He has put new life into the Beethoven symphonies, making audiences applaud them as they applauded Safonoff's conducting of Tchaikovsky's. He makes his men play Richard Strauss and the tone poems of the contemporary French school with a brilliant virtuosity that has heretofore been a monopoly of the Boston Symphony Orchestra. He will conduct his own first symphony to-night and to-morrow afternoon. He is reviving old favorites, like the "Scherzo Capriccioso" of Dvorák, a piece often on the programmes of Theodore Thomas, which has been unduly neglected since his departure. It anticipates some of Richard Strauss's humorous features and adds to them what Strauss lacks—spontaneous melody which speaks to the heart. Strauss is clever, Dvorák inspired; and Mahler's interpretation makes it clear why the Bohemian is superior to the German.

The death is announced of Frederick George Edwards, the editor, since 1897, of the *Musical Times*. He was the author of "The Musical Haunts of London" and of the "History of Mendelssohn's 'Elijah,'" and was a contributor to the new "Grove" dictionary, and to the "Dictionary of National Biography."

Charles Bordes, one of César Franck's most brilliant pupils, has just died at Toulon, aged forty-six years. His talents were first recognized in a commission from the French government to collect the folk songs of the Basque countries. In 1890 he founded the society of the Singers of St. Gervais, which devoted itself especially to the old church compositions of the fifteenth, sixteenth, and seventeenth centuries. In the organization of the Schola Cantorum Alexandre Guilmant and Vincent d'Indy were associated with him, and he continued his propaganda by founding organizations for the cultivation of the old music in Lyons, Montpelier, Marseilles, and Toulon. His name was made widely known through his "Archives de la Tradition Basque." 1889.

Art.

NATIONAL ACADEMY PICTURES.

Having been away for a matter of three years, the present writer is unable to make the prescribed comparisons between this and recent Academies. As measured by those of a few years ago it is more varied. Figure painting and portraiture of a decorative sort have come to relieve the stereotyped alternation of portraiture and landscape painting. Barring the front room, it is better hung than was usual. In the Vanderbilt gallery the arrangement is admirable. Of course, this ease is won only through sacrifice. One hundred and seventy paintings were accepted only to be sent back for want of wall space. It seems to us that a consolation list of such disappointed artists should be printed in the catalogue. With those who blamelessly remain in outer darkness should be commiserated those forty-odd painters whose contributions, crowded frame to frame in two tiers, are seen in the academy room by electric light. Here no one may be certain of the quality of what he sees. For example, Ernest D. Roth's The Yellow House, standing so upright on its bluff against a sweep of plain, seems one of the most vigorous and self-contained landscapes of the show. But one cannot venture to decide how much the electrician has made or marred Mr. Roth.

If the present show differs from those of some years ago in variety and improved hanging, it is painfully true to type in the prevalence of absenteeism. A dozen of the more prominent among the older men, and perhaps as many among the growing talents, have not thought it worth while to exhibit. A dozen more of the men who count have sent rather mediocre contributions. Later in their personal shows, or in those of the smaller groups, we shall see what has really interested them this year. Now the Academy, through its reorganization and in its present policy, has put itself in a reasonable and liberal attitude. The old feuds are now outlawed. Why, then, is there not greater loyalty among its members? Partly due to American individualism, much of this abstention hardly deserves so fair a name.

Ranging as it does from monumental decoration to *genre* or mere illustration, figure painting is the surest index of the condition of a national art. What is our kind of figure painting? Is it Kenyon Cox's intelligent revival of the Venetian manner—without, however, the Venetian sweep or glow—in the big oval composition, Passing Commerce Pays Tribute to the Port of Cleveland, or is it Mr. Sewall's pre-Raphaelite medallion, Psyche Seeks Love Beyond the River of the Dead? Both these decorations have engaging details. Mr. Cox's Danae-like Cleveland is calculated to detain the hurrying god of trade; Mr. Sewall's shades of the dead are winsome folk and their attitudes charming and pathetic, yet neither composition invites the mind to step in and be at rest. A painter's world should be inviting and habitable. That Elliot Daingerfield's emphatically is in such a picture as Pearls of the Morning, and this by no means through the obvious prettiness of nacreous flesh, soft virginal forms, water lilies in a mountain, shrubs and saplings screening a silvery sky. These ingredients are in a way nugatory. What counts is a demure and yet passionate vision, a reflective but ardent consummation of an ideal. Mr. Daingerfield is frankly in the line of Giorgione and Fantin, and thereby more himself perhaps than the restless individualists that know no past and acknowledge no master. The few remaining nudes want rather little attention from the fastidious visitor. F. D. Marsh's two figures in the Golden Cup suggest a tonal beauty which the electric light undoubtedly minimizes unfairly. There is vivacity and joy of life in Lillian Genth's two bathers in a shaded pool, but the slipperiness of the touch is unduly prominent, while unexpressive, and the invention barely escapes banality. Childe Hassam's big Aphrodite raises the whole question of the value of his accomplishment in this vein. To many it will seem less spontaneous and compelling than his prize picture of a few years ago, Laurel. To pose a model studio-fashion in the open air and there paint her atmospherically is in itself a conventional and inconsequential procedure. Convention for convention, it is a pure assumption, and a doubtful one, that open-air formulas are preferable to those of the studio. The surfaces of Mr. Hassam's picture are charming, but Aphrodite has a casual, nay, a wan-

dered, look in the world here provided for her. In spite of unassimilated spots of local color, Sergeant Kendall's Psyche is charmingly placed in her oval, distinguished in line, and quite masterly in modelling.

The president's contribution, Sunlight, which holds the place of honor worthily in the centre of the big gallery, might be reckoned to portraiture, but the title and the intentionally slight characterization make it rather the finest example here of the painting of the draped figure. Mr. Alexander, always faithful to his love of the Hogarthian line of beauty, makes a great bow of the girlish figure which bends over to enjoy the rays of sunlight that fall athwart the skirt of a greenish yellow gown. It might be argued that the Tanagrine inventions in which Mr. Alexander is so fertile would be more effective on a smaller scale. What is indisputable is the thoughtful spontaneity of arrangement, beauty of tone, and massiveness of construction of this unpretending picture. To note how flimsy it makes nearly all the purposefully robust portraits look is to take a lesson in real draughtsmanship. With M. Jean McLane's The Hill Top, a picture which received high exhibition honors at Paris, we have reached our modern sort of thing. The expression of the upturned faces watching soap bubbles float away toward the clouds is vivacious and truthful, and the composition has a certain freshness and spaciousness. It is sturdily painted without doubt or fears.

In the nature of the case, considering the conditions and limitations of the artist who must live by depicting his clients, portraiture will only rarely rise above what Hogarth called "portrait manufacture." It would be hazardous to declare that any portrait in the present exhibition escapes this classification. If so, George de Forest Brush's seated figure of Henry George, painted in 1893 and worked oven ten years later, Sergeant Kendall's Dr. Alger, John W. Alexander's Richard Watson Gilder, and Montague Flagg's Portrait of My Wife smack least of the face-painting shop. It is needless to dwell upon these sound traditional works. They have in common fine arrangement, attractive quality of paint, serenity of mood, and patient interpretation of character.

It is emphatically livelier below the gangway among the manufacturers. Here Boldini lords it supreme. His Mrs. Clarence Mackay tossed by an unexplained tempest and fearfully enveloped in an electric blue gown down which shoot baleful zigzag reflections, may or may not be a caricature of a masterful great lady. It has the merit, whatever that may come to, of being unforgettable. It marks the acme of modern restlessness, and cannot be recommended as a model, for that eminence is only big enough for one man, and is already triumphantly occupied. Possibly the future will regard it as a pathological exhibit. How tame and traditional in comparison seems not merely the Gitana of John Sargent, a relic of his earlier and better days, but also his portrait of Miss Carter. That reversion to early English modes which has marked his later work is betrayed clearly in the latter portrait. It has with the winsomeness something of the insubstantiality of a Romney. In the filmy scarf covering a strident harmony of green and crimson there are passages that only the magic hand of Sargent can paint; but, in the main, like most of his productions for a matter of ten years, it suggests that he no longer pays extravagantly with his person. Robert Henri, on the contrary, seems to be engaged in the difficult and superfluous task of underlining himself. His Girl with Parasol has more than the old emphasis but less than the old stability. The portrait of Mrs. Rockwell has style and fine painting in the blacks, but hardly structure enough to support the over-accented head.

At bottom, all painters of natural scenery deal either directly with water or indirectly with its effects upon the earth; hence, a truer distinction than that of landscape and marine would be the art of the river and of the sea. Here, admittedly, we find our art at its best.

In landscape, in the narrower sense, however, this exhibition barely holds its own. Bruce Crane, F. B. Williams, Redfield, Gardner Symons, and Ernest Lawson give a distinct fillip. From such variously accomplished men as Alden Weir, Ochtman, Ben Foster, Groll, Ranger, Walter Palmer, Cullen Yates, one gets the customary impression with perhaps a little less than the customary intensity. It is fair to say that at least two of these men have merits unadapted to exhibition ordeals. A better Bruce Crane than Woods and Hills the present writer does not recall. It has peace, a refined topographical sense; the sweep of pasture and density of woodlands are delicately indicated; everything is crisply in place; its accord of tans and grays is tenuous but satisfying. It is a picture in which, through selection and sacrifice, naturalism attains to style. Of similar temper, but more robust, as befits his theme, is Redfield's The Rising River. Here the emphasis is on motion—in the saplings that have followed while resisting the flow of the river, and in the drive of the blue river itself. There is zest in the workmanship, and a kind of classic restraint, too, not common in work of this intensity. Unless surface indications fail, Gardner Symons, whose Opalescent River has handsomely won the Carnegie prize, has come under Mr. Redfield's influence. If so, the disciple bids fair to outdo the master. Mr. Symons not merely gives the sense of cleavage, which is the attribute of a river bed, but also, out of the lines of floating ice cakes and intervening spaces of blue water, the verticals of bordering saplings, and the plunging lines of the river bank, has woven an agreeable pattern.

But, of course, there are many ways, and Frederick Ballard Williams, with Hills of Purple and Rose, is here to remind us that romantic coloring and beautiful textures are not obsolete even in this day of uncompromising naturalism. In its depth and largeness, in its romantic alternation of light and shade, this glimpse down a mountain valley has in it some suggestion of Constable and Barbizon. It is the work of a man who, while valuing his eye and hand, does not share the prevailing distrust of the back of one's head.

Among the younger river men there is no more interesting figure than George Bellows, A.N.A., elect. Both his pictures in this show, The Palisades and Excavation at Night, are of extraordinary force. The city scene has fine pictorial quality as well. The very buffet and shiver of the arc-light on gashed rock are suggested, and the glow of old brick basements in the penumbra above gives the necessary element of repose in a composition of demonic energy. Mr. Bellows's inspiriting work is so unfamiliar to the present writer that with diffidence he alludes to the dangers of a reputation for what gentlemen call "guts" and ladies "good red blood." If one is grateful for the power of Mr. Bellows one welcomes also the tranquil ease with which Charles Warren Eaton brings off a decorative effect from the random data of nature. The handful of American subjects here exhibited show how much this is a personal gift, and how little in his better known foreign subjects he has really depended upon conventional picturesque ingredients.

European painters of the sea have mainly dealt with its mottlings and iridescences in calm. Our painters have studied it rather in action as it gnaws at the coast or surges in midocean. Gedney Bunce is of the European mood, and his work has an exotic look. A single and minor excellence, that of tone, is carried to the superlative in his pictures, which have just enough framework to explain the tonal display. This time one is a sunset and the other a sunrise, but the labels might be exchanged without greatly troubling the visitor. In both, thin lifting clouds with their reflections form a sort of chevron, in which like a shaft is inserted an indication of the skyline of Venice. What counts is the brocading.

Winslow Homer, the most American and the greatest expresser of the might of the sea, is unhappily absent, but his spirit is represented in the masculine work of several younger painters. Of

these Paul Dougherty seems to have the most matter in him. His single contribution, The Black Squall, is a study of opposed forces—a shattered wave recoiling from the rocks, while behind the racing sud outruns its slower parent billows. There is motion and clamor in it, more, perhaps, of the anarch quality of such a scene than of the majestic order that overrules battling wind and wave. Less energetic and more pictorial is Emil Carlsen's The Meeting of the Seas. Converging breakers spout in a miniature geyser down a shelving beach amid the ambers, browns, and olives of an overcast day. The composition is sparse but unified and grows in effectiveness the longer it is viewed. Mr. Waugh's study of ocean rollers gives a sense of their weight, but not of their motion. The searching modelling of the surfaces results in a kind of paintiness. The man who has the knowledge such a study implies should be able to do something much more pleasurable.

The most novel and perhaps most promising variety of our painting—the portrayal of the town—is either relegated to the tender mercies of electric light, exemplified, as in C. C. Cooper's case, by rather unrepresentative instances, or lurks sulkily in the studios. W. J. Glackens's vivacious Italian Parade is about the only composition of this type that fulfils the requisites of being good, present, and visible. The scanty showing in this branch may be due to conditions over which the Academy has no control, but the absence and poor placing of the New Yorkers mean a distinct subtraction from the vitality of the show. This kind of work seems the most idiomatic part of our production—being merely the fine flower of our most solidly grounded art—that of illustration.

Sculpture, as the limited accommodation of the galleries dictates, is present only incidentally and in a decorative capacity. Chester Beach's Young Nymph catches the gracility of adolescent forms, though there is something amiss in the joining of the nymph and the tortoise on which she balances. Otherwise, on superficial inspection, the animals of Lila A. Wheelock, and the portraits of Chester Beach, Grafly, Hartley, Edmond T. Quinn, and Robert I. Aitken seemed most attractive. M.

Frederick S. Keppel has assembled more than thirty reproductions from rare prints or pictures and has accompanied them by a running commentary, including a bit or two of original verse. The result is an attractive gift book under the descriptive title "Christmas in Art: The Nativity as Depicted by Artists of the Fifteenth and Sixteenth Centuries" (Duffield & Co.). There are rare examples of German and Spanish masters, and one or two charming cuts from miniatured manuscript. But Dürer really ought not to be held responsible for the crowded Adoration in the Naples Gallery (p. 66).

Henry B. Wheatley was well inspired when he decided to gather together out of the older commentators of Hogarth and his own researches the volume now handsomely published as "Hogarth's London: Pictures of the Manners of the Eighteenth Century" (Dutton). Here is an elaborate explanation of all the chief compositions. One gets the gist of Ireland, Nichols, Steevens, etc., without their superabundant dross. Mr. Wheatley is commendably cautious in accepting this older testimony as to portraits in Hogarth's character studies. Given his remarkable memory and inquisitive observation it seems impossible to us to fix the bounds of portraiture in his pictures. A kind of half-portraiture is probably the universal method. Through high life, low life, taverns, hospitals, prisons; to the hustings and suburbs; to church and to the theatre, Mr. Wheatley follows Hogarth. We share in his feuds with Pope and Wilkes and "Bruiser" Churchill, and in his friendships with Fielding and Garrick. The book is quite frankly given over to the antiquarian side of the subject, but Hogarth himself undoubtedly thought his function as an historian of manners all important. The marvellous technical accomplishment which we are only now coming to value at its true preciousness, he quietly took for granted. With its many fine plates, fortunately most of them after the pictures and not after those coarse engravings which have unduly obscured Hogarth's artistry, this book will be a useful companion to the standard life by Austin Dobson. We have here pretty much all the relevant material, a considerable amount of which has been added by Mr. Wheatley's industry. It naturally lay apart from his theme to treat the considerable Continental literature on Hogarth, but Julius Meier-Graefe's excellent monograph should have been noticed, if only because it is too recent to be included in Mr. Dobson's exhaustive bibliography.

Hermann Kaulbach, the German painter, has died in Munich. He was born in that city in 1846, and was the son of a painter of reputation. He was a student at the University of Munich, and later a pupil of Piloty. He became a royal professor of the fine arts in 1889. Of his works a large proportion were historical paintings. His "Immortality" hangs in the Pinakothek, at Munich; and he was the recipient of many prizes, including medals awarded at Chicago in 1893.

Finance.

PLANS FOR THE GOVERNMENT FINANCES.

To say that Secretary MacVeagh's first annual report for the Treasury Department is such a statement as an intelligent body of shareholders would welcome from the president of their company, is to express very high praise. Treasury reports in past years have tended to pass lightly over, or to ignore entirely, the practical questions of efficiency in administering the public exchequer and of scientific adjustment of expenditure to income. One or two exceptions were, however, noteworthy. Those considerations were always foremost in the mind of that eminent finance minister, Secretary Hugh McCulloch, and it was his lucid and practical handling of them, in his annual reports, that made those documents, so to speak, classics among our government papers, sure to be read with profit by students of the fiscal problems of to-day. Mr. MacVeagh's report takes rank, in this respect, with those of his eminent predecessor.

With the aggressive attitude of the Government in holding down estimates of expenditure to what the Secretary calls the "actual and irreducible needs of government," the President's message has made the country familiar. Mr. MacVeagh points out the reasons for the looseness and extravagance of our past policy in that direction. Our Government submits no budget. That is to say, its finance minister does not, like the Chancellor of the British Exchequer, rise in his place on "budget day," outline his projects for the year's public expenditure, estimate what money will be needed for such outlay, explain the estimates, and, finally, submit his own plans of taxation whereby the requisite revenue may be raised. Hamilton began with such a budget, but, as Mr. MacVeagh points out, the plan "was never fully realized, could not have lasted, and cannot now be instituted."

In a measure, the haphazard calculations, the series of unnecessary surpluses and unnecessary deficits, which have resulted from our plan of arranging public income and public outlay through different legislative chambers and through separate committees in each of those chambers, may be averted by the new provision of last March for a supervising "budget committee." This body has for its duties the thorough revision of estimates by the Cabinet as a whole, before they go to Congress, and their further consideration by the chairmen of the several appropriation committees, acting in concert. The plan is as yet experimental; but the result to date, even before the estimates have been formally taken in hand by Congress, has been the asking of $94,000,000 less than was asked for the current fiscal year, and $55,663,000 less than was actually appropriated for it.

The Secretary rightly declares that it is neither necessary nor proper for him to discuss at this time the general problem of currency reform. That problem has been referred by Congress, for investigation and report, to the Monetary Commission, and pending its action the matter is in abeyance. The much-mooted Central Bank expedient is not so much as mentioned in the Treasury report. The Secretary merely observes that to-day we have "neither an adjustable currency nor trustworthy surplus

reserves"—students of certain recent bank statements will read the last four words with interest—and he appeals for the laying aside of "political partisanship, special interest, and pride of opinion," in future consideration of the problem.

But there are some banking problems which the Treasury is forced to confront at once. One of them is the rise in the interest rate on government bonds, and the bearing of that rise on the use of such bonds to secure the present banknote circulation. The 2 per cents, into which the bulk of the public debt was converted in 1900, and which to-day make up nearly seven-eighths of the entire collateral behind the $680,000,000 outstanding banknotes, are selling virtually at par, and have been below that price. The cause of this is similar in the main to that of the recent fall below par of New York city's 3 and 4 per cents—namely, the prospect of very large additional issues, and the general rise in the price of capital. But the depreciation in the United States bonds is more awkward than in the New York bonds; first, because many of the government 2 per cents were bought by national banks at a higher price to take out circulation, and, secondly, because a fall below par on the part of bonds thus pledged may be followed, under the Banking Law, by demand for additional collateral against banknotes now outstanding.

Secretary MacVeagh says, quite correctly, that "no government, however rich, has a 2 per cent. borrowing power." A glance at the London market's daily prices shows that French and English government bonds, at the current valuation, yield 3 per cent. net to the investor, and German Imperial bonds 3½. The Secretary intimates his own regret that 2 per cent. bonds should ever have been issued by our Government. His criticism is probably sound, though it is fair to say that when Secretary Gage's proposed conversion plan of 1900 was adopted, neither the costly Panama Canal undertaking, nor the general rise in the value of capital, nor a concrete plan for dispensing with a bond-secured banknote circulation, was in sight. The conversion to a 2 per cent. basis, with the subsequent fixing of that rate for Panama Canal loans, was designed to avoid the very situation which altered circumstances have brought upon us, and to avoid it through holding down the market premium on the bonds, so as to give small scope for depreciation.

Be this as it may, the Secretary now proposes that, if the 3 per cent. bonds contemplated be used as a basis for banknote circulation, the notes shall be taxed 1½ per cent., as against the present tax of one-half of 1 per cent., which he would maintain in the case of the government twos. The result would be to give no advantage to circulation based on the 3 per cents, expectation of such advantage having been at least one cause for the weakness of the present outstanding government bonds.

The argument for a provision of this sort is convincing. The Secretary further suggests that if a sale of "Panama threes" "should produce more cash than the Treasury balance needs, there might be bought in the market for the sinking fund some of the 2 per cent. bonds." This, he reasons, should sustain the price above par. It is doubtful if this plan will be so readily accepted as a sound economic proposition. It is, however, not without pertinence to observe that, as the law now stands, the Secretary not only has the power to redeem outstanding debt, regardless of new borrowing, but is instructed so to do. The Federal statutes explicitly require "purchase or payment of one per

Financial. Financial.

Farm Lien Securities

Interest, 6%

Among all the bonds that we handle, there are none so attractive to men who know, as Irrigation bonds.

These are among the reasons:

Irrigation bonds are secured by first liens on the most fertile lands in America.

The liens are given by individual land owners in payment for water rights. The water immediately multiplies the land's value. The first crop from the land will usually pay the whole lien, and sometimes by several times over.

The liens are conservative. Bonds are rarely issued to more than one-fourth the land's value.

The liens are paid off in annual installments, so the indebtedness constantly decreases.

The bonds are additionally secured by a first mortgage on all the property which the Irrigation Company owns. So we have a corporation, with large interests at stake, to guard against any delinquencies.

Some Are Municipal

Some Irrigation bonds are issued by organized districts, the same as School bonds. Such bonds form a tax lien on all the taxable property in the community. They form a high grade of municipal security.

Other Irrigation bonds are issued under the "Carey Act." Such projects, until they are completed and turned over to settlers, are under the constant supervision of the State Engineer and State Land Board.

Behind every Irrigation bond that we handle there is ample and ideal security

Six Per Cent.

Irrigation bonds pay six per cent. interest. That is a higher rate than can now be obtained on any large class of bonds based on equal security.

The demand for irrigated land, because of its enormous fertility, greatly exceeds the supply. Irrigation projects are profitable; and, if rightly conducted, are free from risk. So there is great demand for money to help finance these projects, and six per cent. is paid to obtain it.

$100—$500—$1,000

Irrigation bonds are isued in series, some due in two years, some in twelve years, some due every year between. One may make long-time or short-time investments. Every bond paid off increases the security back of the rest.

They are issued in denominations of $100, $500 and $1,000, so they appeal to both small investors and large.

Irrigation bonds have become the most popular bonds that we handle. They are the safest six per cent. bonds that we know.

73 Issues Sold

In the past 15 years we have sold 73 separate issues of Drainage and Irrigation bonds, based on farm lien security. Not a dollar of loss has resulted to any investor.

We are now the largest dealers in bonds of this class. We have our own engineers and attorneys to pass on every detail. An officer of our Company constantly resides in the irrigated sections, watching the projects we finance.

Because of these facilities we get our pick of these bonds. There are very few issues which are not offered to us.

We have now written a book based on all this experience. It will give you a clear idea of all that pertains to Irrigation and Irrigation bonds. Every investor, small or large, owes to himself its perusal. The book will be sent on request.

January Investments

For January investors we have on hand 100 varieties of bonds. They include Municipal, Public Utility, Water Power, Corporation and Irrigation Bonds. Please ask for our list. Cut out this reminder so you won't forget.

Jones's Logic, Inductive and Deductive

By ADAM L. JONES, Professor in Columbia University. x+304 pp. 12mo. $1.00.

The aim of this text-book is to present, in as concrete a form as is possible, the rudiments of Logic, considered as method. Exercises are supplied for most of the chapters: emphasis is put upon the application of the principles discussed.

R. M. Wenley, *University of Michigan:* It seems to me an excellent book. In particular, it is calculated to deliver the student from that bane of most logic manuals; the appeal to mere memory. At many points, too, Prof. Jones brings his chapters into touch with practical problems of the day in a way that can hardly fail to stimulate even the dull.

Gordon's Esthetics

By KATE GORDON. v+315 pp. 12mo. $1.50.

A college text-book, which aims to give a concise statement of some of the important facts of æsthetic experienco and artistic activity and to stimulate an interest in the experimental treatment of æsthetic problems.

E. D. Starbuck, *State University of Iowa:* It is easily the most comprehensive and best tempered of the books that have appeared on the subject. I shall use it in my classes.

SUDERMANN'S
The
SONG of SONGS
The Great Novel of the Twentieth Century

READ THIS:

Sudermann's many dramas and novels may be regarded as merely preliminary studies for this, his masterpiece. It is the story of a beautiful girl animated by high ideals and beset by temptations on every side. Lilly suggests, remotely, Daudet's Sappho and Dumas's Camille in a nobler embodiment. Alone in the world, loving and sympathetic by disposition, she encounters successively sordid poverty, wealth, and libertinism, false love, dazzling Bohemianism, perfect bliss, then commonplace Philistinism. How she threads her way over high peaks and through dark valleys, how she resists and how she succumbs, are the actuating springs of a novel incomparable in this decade.

The European Sensation of the Past Year

"A masterpiece of the Sudermann of today."—*The Nation.*

The Only Up-to-Date Book on Polar Discoveries

HAND-BOOK OF Polar Discoveries

By GEN. A. W. GREELY
Of the United States Army

This authoritative résumé of polar explorations from the earliest voyages has been thoroughly revised, and includes the latest discoveries by Peary, Cook, and Shackleton. Written by one who has himself attained distinction as an explorer in the Far North, this handbook has long been the standard work on the subject. In this new edition there has been added an excellent colored map of the Arctic regions that gives accurate information, and there are new chapters on "The Conquest of the North Pole" and "The South Polar Quest." Gen. Greely considers dispassionately the claims of Peary and Cook.

336 pages, with Maps and full bibliography. Cloth. Price $1.50 net; postpaid, $1.62.

The Eruption of Pelée
BY
ANGELO HEILPRIN

This work embraces the main scientific facts contained in the author's "Mont Pelée and the Tragedy of Martinique" and the "Tower of Pelée," together with the results obtained from his last visit to the volcano in 1906, when it was found practicable to descend into the crater, whence the giant obelisk of rock had been extruded to a height of 1,000 feet. A quarto volume, containing a remarkable atlas of plates from photographs.

Price $4.00; postage 54 cents extra.

THE GEOGRAPHICAL SOCIETY OF PHILADELPHIA
400 Witherspoon Building, Philadelphia, Pa.

AN EXPERIENTIAL PSYCHOLOGY OF MUSIC
By KARL FEININGER

"There can be no doubt that this work will arouse much comment, some discussion, and many acrimonious denials of fact, all of which will only prove that it possesses those qualities which make for life and progress. The musical thought of the American people would be the clearer if more comprehensive studies, similar in scope, were brought out every year."
—*The Violin World.*

Price $2.00. Postage, 10c. per copy

NEWLY PUBLISHED BOOKS

THE AMERICAN NEWSPAPER. By James Edward Rogers.

This book is an intimate study of the American newspaper, and a reply to certain severe criticisms that have recently been made. The author has tried as far as possible to see both sides of the question, the subject of discussion being treated as one of concrete fact, and he has therefore examined some fifteen thousand newspapers from all sections of the country as a means of getting acquainted with the necessary basis for an accurate judgment. The book discusses in succession the following topics: The Historical Evolution of the Modern Newspaper; The City and the Newspaper; The Nature of the American Newspaper; The Influence of the American Newspaper, and the Causes of that Influence. 228 pages, 12mo, cloth; net $1.00, postpaid $1.10.

SOURCE BOOK FOR SOCIAL ORIGINS: ETHNOLOGICAL MATERIALS, PSYCHOLOGICAL STANDPOINT, CLASSIFIED AND ANNOTATED BIBLIOGRAPHIES FOR THE INTERPRETATION OF SAVAGE SOCIETY. By William I. Thomas.

The papers forming the body of the book are by such eminent modern anthropologists as Boas, Tyler, Westermarck, Spencer and Gillen, Haddon, and Rivers. The author has an introductory chapter on the standpoint from which the materials are to be viewed, and critical comments are appended to each part. There are seven parts: (1) External Environment (Anthropogeography and Primitive Economics); (2) Primitive Mind and Education; (3) Early Marriage; (4) Invention and Technology; (5) Art, Ornament, and Decoration; (6) Magic, Religion, Ritual, and Ceremonial; (7) Social Organization, Morality, and the State. The extended Bibliographies form the chief feature of the book. 920 pages, 8vo. bound in buckram, gold stamped, sewn on tape; net $4.50, postpaid $4.77.

A MODERN CITY: PROVIDENCE, R. I., and Its Activities. Edited by William Kirk.

A popular description, by experts, of the city of Providence, under the following heads: Introduction, Geography, Population, Industry, Labor, Government, Finance, Education, Art, Philanthropy, Religion. For the sociological study which has received so strong an impetus in our day, nothing more apt can be imagined than this thoughtful, illuminating book. And for those who are not sociologists, but who take an intelligent interest in the welfare of our cities, the volume will have a value and a charm quite unique. It is confidently commended to the reading public, both in Providence and elsewhere in America. Illustrated, 374 pages 8vo. cloth; net $2.50, postpaid $2.70.

THE CAMERALISTS: The Pioneers of German Social Polity. By Albion W. Small.

To readers of English only, cameralism is virtually a lost chapter in the history of the social sciences. Although everything now belonging to German polity has a part of its heredity in that type of social theory, not every reputable student of the social sciences in America could correctly define the term, and few could name more than one or two writers to whom it is properly applied. In this volume there is given to readers of English the first reliable and detailed account of the cameralistic school. 500 pages, 12mo, cloth; net $3.00, postpaid $3.18.

ENGLISH POEMS: The Elizabethan Age and the Puritan Period. By Walter C. Bronson.

So favorable has been the reception accorded "The Nineteenth Century" and "The Restoration and the Eighteenth Century" that the present volume needs little introduction. It follows the same general plan as its predecessors, with the added advantage of an especially fascinating field—the most spontaneous and exuberant period of English poetry. The notes contain elucidations of difficult passages and illuminating commentary—the index and bibliography are unusually elaborate and detailed. 550 pages, 12mo, cloth; library edition, net $1.50, postpaid $1.66; school edition, net $1.00, postpaid $1.15.

THE ARMENIAN AWAKENING. By Leon Arpee.

This book will be found singularly interesting and appropriate in the light of the occurrences of the past few years. Beginning with the "Dark Ages" of Armenian history, the author traces the religious attitude and the struggles of this people from the time of the introduction of Christianity. It is a matter of common knowledge to all who are familiar with the Armenian struggle for religious freedom, that political forces have been a strong factor in the persecution to which this people has been periodically subjected. All the sidelights which the condition of European politics could throw on the situation have been employed by the author, and his sympathetic treatment leaves the reader with a clear understanding of the various motives for the frequent outbreaks against the Armenians which have aroused the Christian world. 240 pages, 12mo, cloth; net $1.25, postpaid $1.36.

BIBLICAL IDEAS OF ATONEMENT: Their History and Significance. By Ernest DeWitt Burton, John Merlin Powis Smith, and Gerald Birney Smith.

This book sets forth the content of the biblical teachings upon the subject of Atonement, and suggests the point of view from which these conceptions may profitably be studied at the present day. The attitude assumed toward the records throughout is that of historical interpretation rather than of theological systematization. Consequently, the effort is to discover precisely what ideas of atonement are reflected by the biblical laws, institutions, and utterances. The authors employ the historical method throughout. To trace the history of an idea is to discover the forces that have cooperated to produce it and to transform it from age to age. The history of the idea is thus its best explanation. Yet as many readers will desire, not only a historical statement of what was believed and taught by the prophets and teachers of old, but also some indication of the value of those teachings for the present day, the closing section of the book (chaps. xii, xiii) is devoted to this aspect of the matter. 338 pages, 12mo, cloth; net $1.00, postpaid $1.11.

THE PSYCHOLOGY OF PRAYER. By Anna Louise Strong.

A systematic investigation from the point of view of modern psychology of the mental processes involved in prayer. Prayer is described as the result of the "conflict between different selves." This conflict in turn is eliminated by the prayer process. Numerous examples from actual observation of children add vividness to the work, which has a deep philosophic interest and throws light on present-day religious problems. 125 pages, 12mo, cloth; net 75 cents, postpaid 83 cents.

THE CHILD AND HIS RELIGION. By George E. Dawson.

The aim of the book is to suggest the principal elements in the child's religious nature and training. The first chapter treats of interest as the fundamental dynamic factor in life and growth. The second chapter considers the child's natural religious reactions to its environing world as modes of such interest. The third chapter gives the results of an inductive study of children's interest in the Bible. And the fourth chapter applies the principles thus brought to light to the general problem of religious education. The book is not a systematic treatise on the psychology of the child nor on religious education. It is believed, however, that it presents many essential principles that have not elsewhere been so fully worked out. 130 pages, 12mo, cloth; net 75 cents, postpaid 82 cents.

NEW YORK, THURSDAY, DECEMBER 23, 1909.

The Week.

President Taft's recommendation that political candidates and committees in Congressional and national elections be compelled by law to file a sworn statement of their expenses has not made much stir in this part of the country, but the West is receiving it with hearty approval. The Washington correspondents of the Chicago *Tribune* and the Minneapolis *Journal* have made a poll of the Senators and Representatives from fourteen of the States of the Middle West, and found that they are almost unanimously in favor of legislating to secure publicity of campaign expenditures. Of the 26 Senators who expressed themselves, 25 were for the plan, while only 11 of the 136 Representatives interviewed refused to commit themselves to it. The outlook is thus promising for a statute which will force party committees to do what the Democrats did voluntarily last year. When we remember how much was made of this in the campaign, and how great are the evils which may be hidden by the secret use of huge sums of money in elections, we cannot but hope that the "progressive" West will get its will on this subject written into law.

The long list of nominations sent to the Senate on Monday will at least end the harassing uncertainty to which our diplomats have been subjected ever since Mr. Taft took office. The President has followed the policy of promoting or transferring a number of men who by reason of long service are entitled to consideration; and in the main the appointments are excellent. That of Richard C. Kerens to Austria-Hungary is the exception. In this case, Mr. Taft has yielded to pressure. A railroad man and politician, long a business associate of Senator Elkins, three times candidate for Senator from Missouri, Kerens represents a type whose political activity the country has come to look upon with dissatisfaction and suspicion. The very fact that he was among the largest contributors to the Taft campaign fund ought in common decency to have barred him from any appointive office. The appointment of Mr. Bacon to Paris, where he is likely to repeat the success of Gen. Horace Porter, represents no such compromise. Mr. Bacon has many of the qualities that belong to the successful diplomat, and his experience in the State Department and in business should aid him at this time when the question of our trade relations with France is so pressing. Upon the excellent promise of Mr. Calhoun's appointment to China, we have already commented. Henry T. Gage, ex-Governor of California, goes to Portugal as minister without previous diplomatic service. Charles W. Russell, minister to Persia, is an assistant attorney-general, with experience gained on several semi-diplomatic missions, notably to Cuba and Panama; and Laurits S. Swenson of Minnesota, now sent to Switzerland, was a successful minister to Denmark for eight years. All the other appointments are of men now or formerly in the service who have done well in less important positions.

A Congressional investigation into the matters at issue between Ballinger and Pinchot cannot come too soon. Even Mr. Taft's good nature is not large enough to hold permanently under control a pair of fiery chargers pulling in opposite directions and kicking up in the process an unconscionable amount of mud. Reasonable men were willing to accept the President's painstaking review of the charges against Mr. Ballinger; but there are also men whose suspicions of Ballinger have refused to yield to reason, just as there are still other men whose suspicions are evidently kept alive by self-interest. Reasonable men have been willing to interpret Mr. Pinchot's hostility to the Secretary of the Interior as arising from a keen and sincere sense of duty. But there are rumors that the Chief Forester, in his zeal for a good cause, has resorted to methods of campaigning which may turn out to be unfair and which certainly are of very questionable propriety for an employee of the United States Government engaged in controversy with a fellow-employee. Meanwhile the public at large has been asked to base its opinion on *ex parte* statements, on technical rejoinders, and altogether on driblets and snippets of testimony out of a complicated mass that must be thoroughly sifted before the truth can be got at. An investigation free from the slightest look of whitewash is called for by a quarrel that affects to a considerable degree even the President of the United States.

Secretary MacVeagh's official statement of Saturday, that bonds other than United States Government issues will no longer be accepted as security for deposit of public money with banks, and that in case of deposits now secured by railway and municipal bonds, such collateral must, by next February, be replaced by United States bonds, has several aspects. Our Treasury is not now a large depositor in the banks, for the simple reason that it has no surplus revenue to deposit. Only $51,000,000 of Government moneys is thus held by banks at present, as against the $249,000,000 in December, 1907, and the $147,000,000 even in the middle of 1908. Of the present deposits, some $9,900,000 are secured by State, railway, and municipal bonds, and for that the Government 2 per cents, which are virtually the only United States bonds available, must now be substituted. The Secretary's action is important, first, as receding for all public deposits from the policy adopted by Secretary Shaw in the tight-money days of 1902—a policy of very questionable legality, and pretty plainly recognized as such, in a recent speech, even by Senator Aldrich. The secondary importance of the action, and perhaps its primary purpose, is its possible effectiveness in sustaining the price of the United States 2 per cents in face of the impending new issues of Government 3 per cents. This is of itself an artificial expedient, and might be open to criticism on that ground, but for the entire propriety of dislodging the miscellaneous securities from the Government's accounts. Under the "Aldrich amendments" of 1907, the Treasury would apparently have the right to restrict collateral against public deposits to the 2 per cent. bonds, and to exclude even other higher-rate United States issues. But this would hardly be a probable recourse.

The introduction in the House of Representatives of the American Bar Association's bill to bring about reforms in the practice of the United States courts should prove to be a turning-point in the history of our methods of judicial procedure generally. If an effective improvement is made in the Federal courts, there is every reason to expect that practice in State courts will undergo a like beneficial change. The importance of limiting the possibilities of appeal to cases in which substantial ground for reopening a case is presented has become so generally recognized that the attainment of this object is, as a matter of course, the foremost aim of the bill. The preposterous abuse of the right of appeal has been responsible for an incalculable amount of mischief. In civil cases, it has caused such delay and expense as not only to impose a most serious burden, but to constitute practically an absolute denial of justice to persons of moderate means. In the domain of criminal law, the injury has lain not so much in specific failures and delays of justice as in the moral effect of the spectacle of trials dragged out endlessly, their issue apparently depending on meaningless technicalities, and the operation of justice presenting itself to the general mind as a matter of luck or skill or persistence rather than as the working of a great principle.

With the conviction of the five indicted Sugar Trust weighers, Mr. Stimson and his associates will take courage in the prosecution of their work, and especially in making every possible effort to secure the punishment of those primarily responsible for the thefts. Counsel for the defence had laid stress on the fact that any frauds there may have been were committed for the benefit of the Trust, and that it was therefore the big men in the Trust, and not these hired workmen, who were the real criminals; and Mr. Stimson, in his closing speech, felt it proper to express his full concurrence with the opposing counsel as to "the relative degree of moral guilt," and to declare that he regarded it as his clear duty "to take all necessary steps to bring them [the men higher up] to punishment." The disagreement of the jury in the case of Bendernagel, cashier at the Havemeyers & Elder Refinery, will not lessen the activity of the prosecution in this direction; it should be remembered that the chief plea in behalf of this defendant was that he acted under orders, without any guilty knowledge of the frauds covered by the payments he was making. Whether this defence was sound or not, a second trial may determine; meanwhile, Gerbracht, superintendent of the Havemeyers & Elder plant, has been indicted by the grand jury and is awaiting trial. The first point has been gained by the Government—the men who did the direct and tangible work of cheating have been convicted; if this simple result had proved too difficult to obtain, the whole matter would have looked hopeless. As it is, there is ground for looking forward to results that are vastly more important and that will be of permanent value.

Between President Taft and Senator La Follette, according to a Milwaukee dispatch, there is intense hostility. "It will be open war without any direct declaration of war." La Follette is not to be recognized in any way in the distribution of Federal patronage in Wisconsin. It is all to go to Senator Stephenson and the State Chairman, who is not a La Follette man. And the pity of it is that all this dire wrath of Achilles is said to be due to "personal strictures upon the President by La Follette in his magazine." What shall it profit a man to gain a magazine and lose the offices? Or what will a public man give in exchange for the offices? La Follette, at any rate, shows that his guns are not all spiked, for the latest issue of his magazine intimates the fear that President Taft is holding back his special messages until he learns what Aldrich and Cannon want him to say. We think that the only way to answer that is to cut off the head of one La Follette collector of customs and remove three postmasters.

Maryland is one of the States in which the working of the Public Service Commissions in New York, and of similar bodies in two or three other States, has attracted a great deal of interest. The movement in favor of establishing such a commission in Maryland has had the hearty support of the leading newspapers, and of public opinion generally. A bill has now been drafted by Attorney-General Straus, and its provisions are drawn mainly on the lines of the New York Public Utilities act, though features embodied in the laws of Wisconsin and Massachusetts have also been utilized. The bill is very comprehensive, including the regulation of railways, street-railways, gas, electric-light, telephone, and telegraph companies as to rates, character of service, issues of stocks and bonds, etc. The commission is to consist of three members, appointed by the Governor, and their pay, which is not fully specified in the present draft, is to be large enough to secure the full services of competent men.

First in interest among the twenty-four public measures which Gov. Deneen has summoned the Illinois Legislature in special session to consider, is direct primary legislation. Illinois in the last five years has enacted three direct primary laws and has seen them all declared invalid by the courts. The first law, passed in July, 1905, was held invalid the following April primarily on the ground that it discriminated between Cook County and the rest of the State. The second law, in force July 1, 1906, was nullified in October, 1907, on the ground of wrongful delegation of powers, insufficient provisions for registration, and interference with the elector's right to cast a cumulative vote for members of the Legislature. The last two reasons accounted for the invalidation of the third law which went into force in July, 1908, and was quashed the following June. Beneath the bludgeonings of chance, Gov. Deneen comes forth with a new measure embodied in a series of five bills, formed so as to meet the objections of the courts. A direct plurality primary is provided for county offices, and for all incorporated municipalities having a population of 5,000 or above, leaving the system optional for all other cities. Members of the Legislature are likewise to be nominated by direct plurality under such provisions as shall enable the voter to express his preferential choice among three candidates; among these he may distribute three votes, or he may plump them for one man. An advisory vote for President and Vice-President of the United States and United States Senator is also provided for, the plurality being taken for the State at large. A significant

feature is that embodied in the last of the five bills, which provides that municipalities may substitute nomination by petition for the direct primary by a referendum vote.

Should packages marked in writing "Not to be opened until Christmas" be allowed to go through the mails at the low rates applying to merchandise and printed matter, or should they be charged with letter-postage rates? After the proper amount of solemn analysis on the part of the proper authorities, it was decided that such an inscription constituted a personal communication, and therefore the package must be paid for at first-class postage rates. Now, there is really no occasion for this overshadowing fear of the written word which seems to weigh upon the minds of post-office authorities the world over, and which is the source of an endless amount of petty annoyance and difficulty to those who use the mails. The distinction between first-class, or letter, postage and the other classes is no doubt very important from the standpoint of revenue; and post-office authorities naturally feel the importance of this consideration. But they seem universally to have overlooked the fact that, so far as concerns the revenue, only the *single letter rate*—two cents in this country, for instance—is of any importance. The revenue that is obtained from overweight letters is quite insignificant. Accordingly, all this bother about written matter accompanying books and packages could be got rid of, with practically no loss of revenue, by simply requiring a minimum postage of two cents on any package containing written matter. That is, merchandise would pay merchandise rates, books would pay book rates, quite regardless of the question whether they carried written matter or not, provided only that there was as much postage on them as would carry an ordinary letter—two cents. This would not only result, as we have said, in no loss of revenue worth mentioning; it would almost certainly result in an increase of revenue, owing to the freer use of the mails which it would encourage.

William Watson's brother, Mr. Robinson Watson of Montreal, in a statement as admirable in form as it is moving in substance, has brought the recent distressing episode concerning the distinguished poet to a not unexpected end. The long interview published immediately after his arrival in this country showed too clear evidence of an unbalanced mind, even if it had not been matter of pretty general knowledge that the poet had, a number of years ago, passed through a period of mental illness. Mr. Robinson Watson's statement as to the origin of that former attack is of the highest interest, connecting it with the production of the noble poem on the death of Tennyson under circumstances of extraordinary strain, with the poet's previous struggles with poverty, and with the shock of joy and relief caused by signal and substantial recognition coming at that time. It can but be matter for sincere regret that a way was not found to keep this man of high and fine nature, who represents today as do few others the best traditions of English poetry, out of the newspaper whirlpool. But it is reasonable to hope that, wide as has been the publicity given to what looked like an unpardonable offence on his part, the episode will now be forgotten and William Watson restored, in the eyes of all the world, to the place to which the spiritual nobility as well as the literary excellence of his work entitles him.

"From my knowledge of the working men of the North," writes a correspondent of the London *Spectator*, "I am quite certain that if Mr. Balfour definitely states that in order to broaden the basis of taxation he will advocate a duty on foreign manufactured articles only, he will win Lancashire, which, as you know, has a great influence on the voters at the later elections; but if there is the slightest doubt in the minds of the operatives with respect to a tariff on foodstuffs, he will assuredly lose." Whether this forecast is correct or not, it gives an interesting picture of that state of mind which is at the bottom of the strength of protectionism the world over. The Lancashire workingman, it happens, has been brought up with such a strong feeling of the importance to him of free trade in food that his fear of the effect of a tariff on foodstuffs may outweigh his desire for a tariff on manufactured goods which would help him in the home market; but, aside from that, his leading thought probably is that he would like foreign competition ruled out from his own particular field. And once the protective system is actually established, this desire outweighs all others connected with the question. Each beneficiary desires to hold on to his part of "the pork," and only a few go beyond this consideration so far as to strike a balance of advantages and disadvantages, even for themselves, not to speak of the country as a whole. It is easy to see why, when a protectionist régime has once been started, it is almost impossible to bring it to an end.

In the College of Cardinals there is an unusual number of vacancies, and several American archbishops have been candidates for a red hat. But they are likely to be disappointed, if we may believe the well-informed Vatican correspondent of the *Corriere della Sera*. He gives it as the semi-official opinion that, of the nine or ten new cardinals to be created about the middle of January, not one will be American. Bound by the concordat with Portugal, Pius X will bestow the cardinalate on Monsignor Bello, Patriarch of Lisbon. At least three Italians will be chosen—Granito di Belmonte, Papal nuncio at Vienna, almost surely, and two workers, like Monsignor Lugari, Assessor of the Holy Office, and Monsignor Giustini, secretary of the Congregation of the Sacrament. France, whose normal supply of cardinals is seven, has now only three. Monsignor Amette, Archbishop of Paris, is slated for one of the honors, although his opinions have not been sufficiently ultramontane to satisfy the Jesuits. To offset him, Monsignor Cabrières, Archbishop of Montpellier, an aristocrat and thoroughgoing reactionary, may be selected. Monsignor Jubillard, Archbishop of Cambéry, is the third possibility among French prelates. One red hat is to go to a Spaniard, and another to an Austrian. Finally, Monsignor Bourne, Archbishop of Westminster, is to receive the honor which is long over-due. The death of Father George Tyrrell, ex-Jesuit and ablest of all the Modernists, has brought a lull in Dr. Bourne's jurisdiction, so that the Vatican can promote him without misgivings. Yet, as the Italian motto runs, "a cardinal is only a caprice of the Pope," the cisatlantic monsignori may continue to hope until Pius X speaks in the consistory.

AN HISTORIC SWINDLE.

The collapse of Cook's case before the University of Copenhagen completely puts an end to his claim to the discovery of the North Pole, and with equal completeness establishes his standing as one of the monumental impostors of history. Those who, like ourselves, have, by the constant exercise of self-restraint, hitherto refrained from pronouncing an unqualified judgment, are now entitled to say that they are astonished at their own moderation; and yet all the while there have been some voices honestly raised to complain that Cook was not getting fair play. As a matter of fact, he has been getting treatment far more favorable than he was in any way entitled to on the face of the facts, and far more favorable than he could possibly have received had it not been for the unfortunate and amazing blunder made by the Copenhagen authorities in the first place. What can have passed in the two hours' examination that he underwent in September at the hands of the rector of the university and the professor of astronomy is now the only mystery remaining to be cleared up; but the world at large assumed that, before the University granted Cook the doctorate, its authorities had found some basis for the action more substantial than Cook's mere assertion that he had reached the Pole.

Aside from the conferring of the Copenhagen doctorate, that bare assertion has remained, to this day, literally all that the world has had to go upon. To say that in demanding more than such an assertion before admitting him to the enjoyment of his honors critics have been wanting in the exercise of fair play, is to make justice ridiculous. But this does not yet begin fairly to describe the situation. It was not the mere absence of proof that counted against Cook; hardly a day passed without adding cogent positive grounds of suspicion to this negative one. Not to speak of the inherent improbability of his story, with its killing of musk oxen with improvised bows and arrows, and other things almost as hard to swallow, there was strong evidence of fraud in his alleged astronomical observations. The absurd accuracy he claimed for his determinations of latitude might have been ascribed to ignorance or inexperience; but his longitudes, carefully set down all the way up to the pole, could be explained only as pure fabrications, for no amount of ignorance would enable him to imagine that he was determining his longitude by any observations of the sun he could make when within a day or two's journey from the Pole. As for such assertions as that in which Cook calmly stated that he "advanced the fifteen seconds"—a quarter of a mile!—lacking to the Pole, or that wonderful reference to "local noon" at the Pole itself, these trifles were charitably passed over with very little comment, though either of them, rigorously judged, would have been of itself almost fatal to his credit.

However, it is human to err, and there might be some way of explaining all this. But here came in the other big factor in the case, and that the most damning of all—the human factor. Confronted with the fact that he was suspected of fraud by the great majority of the scientific men of his own country and England, Cook has never from the beginning taken a single step to free himself from the imputation. So far as we know he has not had a talk with a single reputable scientific man designed to set him straight before honest critics. Nothing would have been easier, so far as the main grounds of suspicion were concerned, than to dispose of them by meeting a committee of impartial scientists and answering such pertinent questions as they might put. Far from courting such an examination, he went around lecturing to large paying audiences, and when that came to an end kept himself carefully out of the way. Meanwhile he was charged with imposture in the Mt. McKinley affair, and adopted similar tactics in that matter; the climax of this part of his adventure being reached when the Montana audience whom he tried to convince of his honesty, voted him down after Barrill had denounced him face to face. Seeing that the only basis for the acceptance of his claim—except the hasty judgment at Copenhagen in September—lay in Cook's own word, was it going too far to say that that basis broke down utterly when he persistently violated the first requirements of the conduct of a man of honor? Indeed, the behavior of some of the Cook people can be explained only on the supposition that they hold any man who says he has made a discovery to be entitled to all the honors thereof until the contrary has been absolutely proved.

In foisting this fraud upon the world, Cook was guilty of much more than an injury to the man whose laurels he was falsely claiming. It has been a great loss to all the world that one of those rare events in which mankind spontaneously finds occasion for triumph and rejoicing was converted into a time of noxious wrangling. As for Peary himself, he has been defrauded of something which can never be restored to him. The enthusiasm which in the first instance would have hailed the accomplishment of a feat that heroic venturers for three generations had strenuously sought to compass, can never be resuscitated out of the possibilities of the past. Such is the temper of man. False as it has been proved, the claim of the cheap swindler has dimmed the lustre of the true discoverer's achievement. He will receive the full acknowledgment that his work merits, in the form of recognition from scientific and other bodies and of a sure place in history; but the joy of the acclaim that should have greeted him at the triumphant close of his twenty-three years' quest can never be his. And one more word of regret is in order. The denunciations of Cook's story telegraphed by Peary from the far North were made the occasion of criticisms which are now shown to have been unjust. That Cook was an outright impostor, without the slightest title to consideration, was doubtless as well known to Peary from the beginning as it is to us all now; we could not make allowance for the state of his knowledge, as he did not make allowance for the state of ours. Finally, in bidding this strange story good-bye, there is one reflection that must be of great comfort to all Americans—that the fount and origin of these woes was not in the action of any half-baked institution of our own country, but in the ill-considered impulsiveness of the authorities of an ancient European institution of learning, in whose discretion we are not to be blamed for having reposed some degree of confidence.

PROFESSIONAL ARMY TRAINING.

Gen. Leonard Wood's appointment as chief of staff of the army to succeed Gen. Bell will undoubtedly start anew the discussion about the value of pro-

fessional training in the army. Since Mr. Root's reorganization of the service, officers have studied more diligently than ever before. In addition to graduate schools for engineers, artillery, cavalry, and infantry, there is a staff college at Fort Leavenworth as well as a War College in Washington. But the spectacle is now presented of the appointment to the most influential position of one who attended neither West Point, nor any other military school in or outside of the army; who was until eleven years ago in the active practice of medicine and surgery; who never drilled a company in his life; whose experience as a regimental commander lasted but two months in 1898. Many officers will not fail to say, with a good deal of force, that if a man of this education and experience, trained for a totally different profession, is entitled to what is practically the headship of the army, all the laborious studying of the modern officer is needless. They will with justice point out that such a happening would be impossible in any other country than our own. Here the belief still persists that any man can abandon the plough and become at once a competent colonel or general.

All of this feeling is not due to jealousy of Gen. Wood, or to his personality. The opinion of the army, as it comes to us, is that Gen. Wood's unflagging activities, physical vigor, and genuine ability have won him the respect of many who felt bitterly aggrieved at his being made a general. It is known that Mr. Taft formed a high opinion of Gen. Wood's energy and worth as he observed them in the Philippines. Such personal criticism as remains attaches to Gen. Wood's insatiate ambition and to other personal characteristics which we have neither the inclination nor the space to discuss at this time. We would merely point out to-day that while nobody is permitted to enter the line of the navy save by way of Annapolis, or, in a few cases, after long service in the forecastle; while the bars are being put up around the consular and diplomatic services, army officers complain because youths from civil life without adequate preparation or examination are almost daily being commissioned officers even in branches like the Coast and Field Artillery, which demand elaborate technical knowledge. In other words, it is said that despite all its educational facilities for a man after he enters the service, the army has not yet been able to get recognition from the War Department or Congress that it is now a specialized profession demanding as high standards of fitness as any other scientific or semi-scientific calling. Two weeks ago, for instance, four corporals and sergeants were appointed second lieutenants in the Field Artillery, a branch of the service with which they were totally unfamiliar.

Upon this point, we have recently received this protest from an infantry officer of the highest standing:

> In the navy all officers have to run the gantlet of four years at the Naval Academy, they have two years' probation at sea before they are commissioned, they are examined at every promotion, and the ineligibles either drop out voluntarily before reaching high rank, or are forced out by elimination. Just contrast this with the army. We have the most elementary examination for entrance for those from civil life and the ranks; in the line, examinations cease with captains; the only test field officers have is the easy ride and a physical examination, against which many of them protest. The condition is absurd.

Now, we are not among those who think that every army officer should be a graduate of West Point; that would tend to narrow the service dangerously. The men who have come up from the ranks keep the corps of officers in closer touch with barrack-room conditions than would otherwise be the case; those who are carefully selected from civil life bring in a fresh and different point of view, and, if they are diligent, may easily become valuable officers. Gen. W. W. Wotherspoon, now president of the army war college and lately assistant chief of staff, is an excellent example of the officer who comes in from civil life and attains high standing in his profession. The trouble is that not sufficient care is taken in selecting the men to enter either from the ranks or civil life, and in promptly eliminating them, if they are lacking in soldierly qualities, just as the navy now weeds out midshipmen for what it merely calls "ineptitude."

Far too often politics interferes; men who are found disqualified are permitted to enter by the waiving of this or that defect. The designation of candidates for examinations is too often done by politicians. Indeed, the army, even after seven years of Mr. Roosevelt, who vowed early in his Presidency that he would separate the service from politics, might almost be called the last refuge of the spoilsman. Congress gladly increased it in 1901, because there were then a thousand or more places to fill; and the army has paid ever since by one scandal after another for the many worthless political protégés who were foisted upon it—often after examining boards had rendered an unfavorable verdict in their cases. The great majority of courts-martial in the service to-day is of men who came in from the ranks, civil life, or the volunteers. But worse is the ease with which men who do not study but prefer to stagnate, remain in the army. For this the service is in part to blame in that the examining boards are not rigid enough. A recent Secretary of War once said that the difficulty was this: "Retiring boards do not retire, survey boards do not survey, and examining boards do not examine." The army retorts that it cannot be expected to do its duty when it is so often overruled for political reasons by the War Department. This condition can only be remedied when politics is excluded, precisely as it is from the navy, on the ground of the high requirements of the military profession. But Congress cannot be expected to take its hands off so long as the Executive and the War Department together place in positions of importance men who owe their successes to other reasons than scientific training, adequate service with troops, and genuine military achievements. No matter how great the fitness of Gen. Wood to-day, the safe rule is to educate and train your generals, not *after*, but before they become generals.

IRELAND AND THE LORDS.

The full commitment of the Irish Nationalists to the Liberal party, for the pending campaign, sharply points the danger which all along lay in the course of the House of Lords. If the Liberals win and come back to power with a popular mandate for Irish home rule, how can the Lords resist it? On their own showing, they would be bound to submit to the will of the voters. Their motion throwing out the budget was framed on the theory that the people must first be consulted about so important a matter. But when you consult the people you have to take their whole mind. Since Mr. Asquith's explicit declaration for Irish control of Irish af-

fairs that question, too, becomes one of the things on which the electors will be asked to record their will. The Lords have appealed to Cæsar, and if Cæsar decides for a large measure of local government in Ireland, how can they hereafter withstand the verdict which they have ostentatiously sought?

This hazard in the action of the Lords was clearly laid before them by many thoughtful and cautious statesmen. Lord Rosebery warned them that they were risking the loss of their entire veto power. So did Lord Balfour of Burleigh; while a large body of sober-minded Conservatives, whose opinions were admirably expressed by an article in the *Edinburgh Review*, argued that it was a terribly mistaken policy, for the sake of a mere temporary and tactical advantage, to throw the whole make-up and power of the House of Lords into the melting-pot of a general election. The case, as they put it, was as follows: The right of the Lords to veto a money bill was at least highly questionable. Even granting that it could be defended, was not its exercise at this juncture more perilous than would be its waiving? Budgets come and go. What is done one year may be undone the next. And the great value of the veto lodged with the second chamber lay in its being reserved for serious national crises, when the unity of the Empire or its necessary defence might depend upon the Lords in opposition to ill-judged action by the Commons. This very matter of Irish home rule was adduced. The Lords had defeated it once, but could they again if the whole question of their right to veto legislation were put to the people and decided adversely? In vetoing a single budget, the upper house might disable itself from ever vetoing another bill of any kind, no matter how radical. This was the powerful argument from consequences to which the heady Lords would give no heed. But the disagreeable consequences are already coming. The hearty espousing of the Liberal cause by the Irish must have brought home to many a peer the words of Sir John Eliot in 1628: "None have gone about to break Parliaments but in the end Parliaments have broken them."

In its practical effect upon the election of a new House of Commons, the determination of the Irish to support the Liberals may not mean the winning of many seats. Of course, the Nationalists hope to maintain their own Irish representation intact, and probably will be able to do so, despite the announced purpose of the Conservatives to contest every constituency in Ireland. The chief interest turns on what the Irish vote in England will do. It is large enough in some constituencies to hold the balance of power, but it is highly doubtful that the Liberal candidates will get the whole of it. The official influence of English Catholics has been pretty favorable to the Conservatives in recent years, especially on account of their attitude towards church schools. The Duke of Norfolk, the premier peer of England, is a Catholic, and is naturally one of the stoutest champions of the Conservatives. The Liberals may well be advised, therefore, not to count too confidently upon having all the votes of Irish Catholics in England. They are probably not "deliverable." Moreover, the obvious interest of the Nationalists is not to have too large a Liberal majority in the Commons. For the past four years, the Irish have played an insignificant rôle at Westminster, largely because the Ministry had such an enormous majority that it never needed them. It would please Ireland better if there could be a return to the conditions of 1884-86, when neither party could carry on the government without the aid of the Irish members. Yet it would remain true that a large Liberal majority pledged to home rule for Ireland could send a bill to give it effect up to the Lords with a greater show of popular demand than would attach to a measure dependent upon Irish votes in Parliament. Thus one sees how mixed are the motives which will enter into the casting of ballots next month by Irishmen in England.

Election forecasts are notoriously more precarious than even weather predictions. Extreme partisans are cocksure; cool-headed men suspend judgment. Joseph Chamberlain, from his sick-room in Birmingham, prophesies a great Liberal defeat. Winston Churchill is sure that the Conservatives will be smashed. Mr. Haldane holds a more measured opinion. He points out that at least 40 per cent. of the voters in England are men who go little to public meetings, take part in no political demonstrations, and gravitate now to the Liberal side, now to the Conservative. They do not advertise what they are going to do this time. Yet the fact remains that the present composition of parties is such that there will be need of an even greater landslide against the Liberals in this election than there was in their favor in 1906, if the Conservatives are to return with a majority. There are to-day only 168 Conservative members of the House. The Liberals, with the aid of the Labor members and the Irish, can muster 502 votes on a division. Hence the Conservatives might win 176 seats and still be short of a majority over all. Where can they make gains? Confessedly, only in England. A half-dozen seats may be picked up in Ireland and Scotland, but even the most hopeful Conservative arithmeticians admit that they must look to the 465 English constituencies. Of these, the Conservatives hold 138. Out of the remaining 327, the Conservatives must win, say, 170, if they are to have any majority at all. In view of these cold figures it is not surprising to learn that the betting odds at Lloyds are 3 to 1 on a Liberal victory.

KINGS IN BUSINESS.

There is no need to enter into a personal appraisal of Leopold II, King of the Belgians. History has usually employed a double standard for such purposes. It weighs the king and the individual. A monarch may be a good king and a bad man, a bad king and a good man, or doubly good. For Leopold II, we need a three-fold category. He was a good king, as kings go, in Belgium; he was a bad king in the Congo, and he was a most unedifying example of personal conduct. Belgium, under him, has prospered; and, in part, the country's prosperity is ascribed to the King's efforts from the beginning of his reign to extend Belgian commerce and industry. But it should be remembered that Belgium is the ancient Flanders, the old industrial centre of Europe, the most congested working population in the civilized world, and that its high state of economic development is rooted deeper than in the personal efforts of any one man.

Leopold's other great service to his subjects, and the first in importance, is commonly found in the organization of the Congo Free State. Whether Belgium will have reason to be grateful to him

for the creation of a colonial empire which its own efforts could never have achieved, time alone will show. In these latter days of imperialism, broad colonial acres pass for an unquestioned blessing in themselves. But to Belgium's annual $1,300,000,000 of foreign commerce, Congo has never contributed more than seventeen or eighteen millions, a little more than one per cent. It is not colonies that, to the little nation of seven million people, have given seventh place absolutely among the great trading nations, and no less than second place if we count relatively to population. On the other hand, it is certain that Belgium has inherited in the Congo a problem of immense difficulty and with it an evil reputation which it will take decades to live down.

To the reputation of Leopold II, of course, the Congo attaches as a perpetual stain. His original motives in building up a vast domain for himself in the heart of Africa may have been all that his eulogists have claimed. But there is no doubt that the man who may have founded the Congo Free State for civilizing purposes became the head of a thoroughly vicious political and economic system. The English critics of the Leopoldian régime in the Congo may have been guilty of bias and exaggeration. But it was no answer to their charges to argue that conditions under the civilized rule of a European monarch were really not so bad as they were in the old days of cannibalism and witch-hunting.

The parcelling out of a great part of the Free State into concessions to rubber-gathering companies in which Leopold was a stockholder, the removal of the natives from the soil, the practice of forced labor as the general form of taxation, all go to make up a classic illustration of what perils are involved to civilization when kings go into the money-making business. By the side of Leopold's Congo ventures, Prince Albert of Monaco makes a respectable living at the roulette-wheel and the card-table. Respectable by comparison are the means by which Spanish-American dictators managed to provide for themselves a peaceful old age among the Parisian kings in exile. Direct extortion by a monarch has behind it the authority if not the sanction of the ages. But it is shocking that the privileges of sovereignty should be employed for the purposes of drumming up business. Between the barbarian king who cuts off heads with his own hands and the modern king who cuts off coupons on which the dividends are paid in human life, the choice is hard to make.

The Russo-Japanese war was probably hastened by the operations of a group of Russian grand dukes who speculated in timber concessions on the Yalu River. Behind the Jameson raid and the South African war rumor placed certain exalted names deeply interested in Transvaal mining shares. The fact is that kings and rulers of the earth, ever since they have been put on the civil list, have been subjected to the temptations that beset the ordinary man of wealth. The future of monarchy the world over is not so unclouded that a prudent regard for the welfare of one's progeny is altogether amiss among heads that wear a crown. The harm comes when the king and the speculator or man of business get mixed.

THE UNDERGRADUATE AS POLITICIAN.

When Gov. Hughes said at Yale that our politics would be regenerated if college men were always honest, he struck a blow at a cherished and ancient illusion. Commencement orators since no one knows when have blandly assumed that the graduating classes represent the moral yeast of the younger generation—the "picked recruits," as George William Curtis expressed it, marching out "with beating drums and flying colors to join the army." To Senators and Congressmen with a message from the ensanguined field, the college boy of the annual June fiction appears defective in some respects. But in accordance with a fine old tradition, his defects are always represented as those of the angels. He is portrayed as a wide-eyed stranger from Utopia entering upon a noisy and iniquitous conflict with his heart full of innocence and his head full of beautiful dreams. This fair impeachment has been attached not merely to the newly-fledged columns, but to the graduate of long standing, also. College breeding has, in the political world, been made synonymous with lily-handed fastidiousness, with airy superiority, with cultivated indifference, with meddlesome and unpractical idealism—with anything you please except with successful and dishonest politics. Yet this disinterested visionary, it seems, is as much an illusion as the "noble savage."

The pain of this disillusion would be somewhat assuaged if we were still able to reply that the college man leaves his Alma Mater, at least, *integer vitæ, scelerisque purus.* But the corrupted currents of the extra-academic world are not alone responsible for the undoing of the "picked recruits." As a matter of fact, many of the young men welcomed on commencement day into a wider field of virtuous activity are already accomplished politicians on a not entirely insignificant scale. They have carved out a career in a community of several hundred members—ample scope for the development of nascent political talent. They have dealt with political groups in the form of classes, clubs, fraternities, and unclassified "barbarians." They have been interested in innumerable offices, and have duly weighed their honors and honorariums. As managers of various undergraduate organizations—musical, theatrical, journalistic, athletic—they have arranged tours of the United States, and even trips to Europe, and have received and disbursed thousands of dollars. They have undertaken the construction of public works of general utility—sumptuous students' unions, expensive grandstands, class-monuments, incomparable cinder tracks. By necessity they have familiarized themselves with the means of levying taxes, both direct and indirect. Now that students have undertaken their own education and are training themselves for "efficiency," it is sheer nonsense to talk about the cloistered walks of the academic life. The democracy in which the undergraduate has his being differs in few essential respects from that in which his elders move and breathe.

Under present conditions, there is no visible reason why it should produce honester politicians than a New England village. On the contrary, several things make it a rather inferior training-school for honest politicians. It is not provincial and homogeneous, like a New England village, but heterogeneous and cosmopolitan, like a great city. It is constituted of few Puritan and many Cavalier consciences--the college student hates a Roundhead. Except for athletics, as the president of Harvard declared in his inaugural ad-

dress, it has no common interests. It may demand open competition and choice of the best men for its athletic teams—though even here there are rumors of favoritism. On most other questions it falls apart into cliques and rings which—experienced undergraduates confess—draw up their "slates," and dicker and bargain over candidates with all the secrecy and skill of their betters. Active electioneerers hustle negligent voters to the polling-places in automobiles. It is whispered that students have been bribed to cast the correct ballot by the payment of their class taxes. The gentle art of "seeing" the faculty—the men "higher up"—in behalf of disqualified athletes is notorious. That the financial management of the miscellaneous functions and organizations of college life is often absurdly extravagant is felt by the outside world as well as by the purses of parents. That managers are sometimes consciously and disgracefully wasteful, that they have been known to enter private luxuries under the head of "incidental expenses," is a fact that occasionally is carried into the dean's office, where, like a corpse in a morgue, it is decently covered. About such matters as these the undergraduate press—there is unfortunately no Opposition sheet—is always as silent as the grave. Yet it is popularly held that the college man in politics is a fool!

We have no Morrison's Pill for purging all the distempers of the undergraduate body politic. Some of them spring from the original corruption of human nature. Some of them are fostered by the centres of aristocratic and plutocratic exclusiveness against which the president of Princeton has been making experimental attacks. Some of them must continue till the reign of the athletic ring is broken. But suppression of sheer extravagance, wastefulness, and actual dishonesty on the part of student treasurers, business-managers, and executive committees would seem to be completely within the control of college authorities. There is no obvious reason why every chartered organization of any importance could not be compelled to render to faculty auditors an exact account of every dollar received and expended. In most of our leading institutions, perhaps, some sort of auditing committee is, in fact, already established. But its work is too frequently performed in an entirely mechanical and perfunctory fashion. It looks to see if accounts balance, but does not inquire very curiously for itemized bills or vouchers. The intelligent but unscrupulous student easily learns to conceal slip-shod bookkeeping and to doctor discrepancies till all looks right to the casual eye. Though this kind of training may be of inestimable service to him in later life, it will not hasten the political millennium. Those who believe still, in spite of everything, that education is the forming of character, should look pretty closely into the educational value of undergraduate activities.

LOUISA SHORE.

I.

Several years ago, as I was turning over the volumes mouldering in the ten-cent box before a book-stall, I found a copy of Louisa Shore's "Poems,"* and chanced upon the lines in the "Elegies" in which she expresses her longing to give some form of shadowy life to her lost brother and sister:

For, could we link their memories to the chain
Of souls whose lights in long procession move
From Past to Future, so might yearning love
Behold their buried beauty live again.

And I vowed then, as I took the soiled volume with me, that some day I would do what I could, at least by large quotation, to extend to a few others who might care for such things the charm that these verses had exercised upon myself. Let me add at once that I am under no delusion in regard to their place in literature or in regard to the power of criticism to resuscitate what is forgotten. If Louisa Shore were a great poet she would need no such memorial as this; as she is but one of the minor poets, the world, under its burden of the present, will pass her by with the other "souls that sleep." This I know; yet withal, the feminine grace of her art, like a faint perfume that teases recollection, and her protest of love and regret for those who went from her into the world's forgetfulness, have stirred a kind of echoed desire to see, if merely for a day or two, her own "buried beauty live again."

Of the life of the poet the main events are given in the Memoir. She was the youngest of three girls, Emily, Arabella, and Louisa, born to the Rev. Thomas Shore, who maintained himself in quiet independence by preparing a succession of young men, some of them of distinguished families, for college, and, after the maturity of his daughters, by taking in younger pupils. Louisa was born in 1824 and died in 1895. Her early years were passed chiefly near Everton and in the New Forest. In 1838, the family broke up their home, and went to Madeira in the hope of saving the life of Emily, who was wasting away with consumption. Here the invalid, the most gifted of the sisters, lingered in waning health for six months, leaving behind her the memory of a thing frail and precious and ephemeral. After a while the family returned to England, and lived in a number of places. Successive deaths left the two remaining sisters finally alone, in a union sanctified by memories and bereavements. Though not without friendships and interests in the practical world, Louisa passed much of her time in retirement, and courted long periods of solitude. As a child, she was very fair, and it was, no doubt, as much her appearance as her gentle ways that led a friend to speak of her "violet life." She published five volumes of lyrical and dramatic poems, the best of which, with the exception of "Hannibal, a Drama in Two Parts," are printed, together with Early Poems and various unfinished pieces, in the volume edited by Arabella.

II.

Though we know, and need to know, little of so uneventful a life, we are fortunate in possessing a unique account of the atmosphere, so to speak, in which the sisters passed their childhood, and of the influences that shaped their minds. From July 5, 1831, when she was eleven and a half years old, until June 24, 1839, a fortnight before her death, Emily kept a diary from which full extracts have been published.* It is a curious volume, childish at once and precocious, with little entertainment for the world at large, but having a pathetic interest for those who cherish the beauty of eager souls expanding in "the untrodden ways." Of happenings there is no record, save the changing of homes, and a visit in her seventeenth year to Devonshire. Here there is the faint adumbration of a love story; and the account of a picnic in which she and her respectful admirer sketch romantic scenes and quote Byron and Shelley, after the approved fashion of the day, introduces a note of youthfulness for which she afterwards felt remorse as for an undue surrender to frivolity. Of the wooing that followed and of the separation on prudential grounds only bare hints are given; "over all things like these," as the editor of the "Journal" remarks, "the intense maiden modesty of her

*"Poems." By Louisa Shore. With a Memoir by her sister, Arabella Shore, and an Appreciation by Frederic Harrison. London and New York: John Lane, 1897.—The original issues of her works are out of print and not easily procured.

*"Journal of Emily Shore." London: Kegan Paul, Trench, Trübner & Co., Ltd. 1891.

nature kept a seal." It was characteristic of this awe of her own heart that the expansive freedom of love went to her lover's sister rather than to himself.

But nature and books were her real passion. Botanizing and birdlore, taken with portentous seriousness by most cultivated Englishmen of her day, were with her almost a function of religion. A new flower discovered in a swamp was a more rapturous event than the speech of a lover, and through years of study she became profoundly cunning in distinguishing the songs not only of different species but of different birds in the same species. One of her complaints in the time of illness was that she could not rise at four or five o'clock in the morning and make her observations. Nor were the imaginative aspects of nature forgotten in these pursuits. It is not every miss of fourteen who can see with so clear an eye and can record in her diary the impressions of an early autumn night so poetically as this:

> Not a breath of wind stirred the leaves of a tree, and scarce a cloud was visible in the heavens, while the clear, silvery light of the moon contrasted beautifully with the dark shadows of the thick foliage. The bats were flying silently about in the twilight before the moon shone forth, and the wakeful robin had not yet ceased his sweet plaintive song, while at a distance in the wood sounded the deep hoot of the owl. The occasional falling of the rose leaves, *which looked as white as snow in the darkness*, added much to the interest of the scene. I could not persuade myself to go to bed, but sat up a long time looking out of my window.

The dropping petals of the rose, as if they were a symbol or foreboding of her own fragility, seem to have haunted her fancy. Four years later, in the New Forest, she expressed the same thought in a poem of regret for her old home and her lost health:

Oh, for one laughing morn of May,
When all was beautiful and gay;
When, far from human sound or sight,
I sought my chamber's quiet height!
There would my spirit wander free
O'er study's deep enchanted sea,
Pausing at times to rest awhile
In rapture on some magic isle;
And still, the open casement through,
Gales redolent of roses blew.
. . . . . .
Oh, for one calm September even,
Which I have thought was dropt from heaven,
So still that I could almost hear
The rose-leaves as they softly fell:
So lucid all the atmosphere,
I could each glistening dewdrop tell.

Study was, indeed, to her a deep-enchanted sea, and the only wonder is that the frail bark of her health did not founder in it sooner. It is pathetic to read of the languages and sciences and chronologies she tried to carry in her childish brain, not to mention the library of dramas and novels and histories she was herself composing. Her mind, so long as any health remained, was never relaxed. While dressing, she learned by heart chapters of the Bible; she read Gibbon while curling her hair at night; and at meals she conned her arithmetic, history, and geography. There is something hectic and pitiful in all this expense of youth, to which no fruit of maturity was allowed. In the clearer vision that came to her before her death, she saw and lamented her feverish impatience:

A mind that like some plant has grown
Too fast with vigor not its own,
Sprung from too glowing soil, and fed
With fancy's dews too thickly shed.
O'erwrought, excited, 'twas at length
Too full of blossom for lasting strength.

III.

Her real achievement was the passion of regret she was able to leave in her sister Louisa's heart. It may be that I have carried something of the pathos of the "Journal" itself into the reading of the "Elegies," and, indeed, my aim in quoting so largely from the "Journal" has been to convey to others what I could of this adventitious spell; yet I must think that the poetry of loss and long-cherished love has not often been more sincerely and poignantly written than in these lines, or the dream-image of memory more sharply etched:

Now all that girlhood, now that flushed, intense,
Young fever, are a whisper of the night,
A faint sweet resurrection, a strange sense
Of absence unexplained till morning light.

But the "Elegies" have a double burden. Of the two sons of the family, one, led, no doubt, by his kinship to the Teignmouths, went to India, in pursuit of fortune; the younger emigrated to Australia, and on the way home, after a long and painful exile, perished at sea. The suspense of waiting for news of the shipwrecked vessel and the tragedy of the story when it came, made an indelible impression on the minds of the surviving sisters. We have no verse or journal from the "mysterious, solitary boy," no record of the showering rays of wit that held his family spellbound—

Wild beautiful caprices of a speech
Now long unwritten, mute, and past from reach—

but he lives with Emily in the "Elegies"; and it seems as if the second death of Emily by the passing away of her shadowy life in his memory, together with the deprivation he suffered by Emily's ignorance of his fate, shot through the writer of the poem with a keener pang for the complete oblivion that should befall when no one was left to cherish their names and images. She wavers between envy of the dead for their peace and a half-reproach for their forgetfulness. "But others live for other tears," she says, and then—

Ah, her young darling is not one of those!
His tale for her untold, its stormy close
Rent other hearts, but stirred not her repose;
Unguessed by her the strange and cheerless bed,
Where rests, for ever rests, his weary head;
And nothing of *their* haunted life she knows,
For whom an awful star, 'twixt wind and wave,
Still hovers o'er a merciless despair,
Still hovers o'er their treasure hidden there, . . .
To whom across the world and waste of sea,
A mute, sad Shadow turns its solemn gaze,
Hopeless of home—"Forget me not," it says:
"I am not lost while Love remembers me."

Oh, faithful to the bidding of those eyes!
Oh, faithful to the tender heart of fire!
Love yearns for thee with unextinguished sighs,
But knows that with *her* death thy memory dies;
And dies with it one sacred sole desire,
To gather up the scattered dust of death,
To charm the long-lost phantom back to light,
And that dear semblance to all time bequeath—
Vain bitter prayer for bitter sweet delight.

IV.

Reading these lines, one is reminded of the pathetic devotion of Eugénie de Guérin to the memory of her brother Maurice, and of her saying that "Nothing but tears makes us believe in immortality." Or, if one is fresh from a perusal of the pages of Mrs. Augustus Craven, as I am, one thinks of that longer chain of family love which lends to "A Sister's Story" an interest quite unique of its kind.* But if the grief in these three cases is equally deep and the determination of memory equally strong, there is a difference in the sources of consolation that sets them strikingly apart. Both Mlle. de Guérin and the members of Mrs. Craven's family were not only intensely religious, but wholeheartedly Catholic. Through the unflagging ministry of the Roman church to mind and imagination, the idea of a present personal God, present almost as a visible sustainer and audible comforter, was a reality even more certain to them than the desolation of their mortal loss. *Ce grand ami perdu*, writes Mlle. de Guérin, *il ne me faut rien moins que Dieu pour le remplacer, ou plutôt Dieu était là, mais il s'avance dans la place vide.* There is, perhaps, in that complete replacing of the human by the divine, a note of austerity that

*Those who have read the "Notes from a Diary" of Sir Grant Duff will need no introduction to Mrs. Augustus Craven's "Récit d'une sœur," to which he is constantly alluding. Fortunately it has been so perfectly translated by Miss Emily Bowles, as "A Sister's Story" (London: Richard Bentley, 1868), and its characters have so many associations with England, that it may be regarded almost as an English classic.

barely accords with the word of comfort. It is the truer Christian *catharsis*, I think, that we find in the grief of Alexandrine for her husband, Mrs. Craven's brother:

> I thank God for my good memory, for one of the greatest miseries of human nature is the gradual blotting out and disappearance of all that one has felt the most intensely. God preserve one from this! It is sweet to be convinced, as I am more and more, that in God our affections are best kept alive, and that He, being all love, knows how to maintain in us the recollection of every affection which He has blest.

Of that sacrament of faith, by which sorrow is converted into submission and submission into the joy of a great discovery, there is nothing in the "Elegies" of Louisa Shore; memory for her has no bond with eternity, but is a product of time and as ephemeral as the object remembered. For the cause of this frustration we must go back to the influences of childhood. Her father was in orders, but had given up his curacy, chiefly it appears because his views were too broad for such a restraint. Throughout the whole of Emily's "Journal" one is impressed by a sense of something strangely absent. The tone of her meditations is constantly, even intensely, religious, yet nowhere do we feel the presence of any definite tangible faith, speaking to the eye in symbols and to the ear in mystic sounds. Such was the atmosphere of devout but insubstantial Christianity in which Louisa grew up, a religion in which duty and conscience had totally usurped the place of the imagination. With the passing of years her liberality, as so often happens, was refined into skepticism, while her devotion remained as mere will to believe, a hope beating tired wings in the void and sinking to earth. She has neither the impersonal consolation of philosophy—she was too thoroughly feminine for that—nor the personal comfort of Christianity:

> We talk in earth's old language to our lost,
> With our own sighs revivify its ghost;
> The form Love meets advancing through the gloom,
> Is but the reflex of her own desire,
> Flashed on the glass, as in a darkening room
> We meet ourselves.—Love once within the tomb,
> Shall not that reflex of herself expire?

V.

It is characteristic of a mind tortured with this religious horror of death, without the living support of religion, that it should look for consolation to a future conceived temporally rather than to the actual reality of the past. "He loseth the greatest part of his joie in this worlde," says Wilson in his "Arte of Rhetorique," ". . . that cannot comfort himselfe with pleasure [s] past, and judge them to be most assured, considering the memorie of them once had, can never decaie." In that power of the past to impose itself on the heart as a thing no longer subject to decay lies the natural bond between tradition, or memory in its transcendent sense, and faith which is the faculty of beholding the eternal beneath the transient. There is no surer sign of lessening faith than the tendency to turn, for a fulfilling of the present, from the possession of what has been to an uneasy hankering after a future which is no more than a glorification, as it is a desired product, of change itself. Now of things to come we have no knowledge or control—*de non apparentibus et non existentibus eadem est ratio*—and almost inevitably in this reliance upon the future there is a note of impotent unrest if not of insincerity. No higher praise, therefore, can be given to Miss Shore than that she was able to invest the idea of progress with a persuasive passion. I have read much of the literature of the future—as who has not in these days?—but I do not know where to find anything comparable for poetic effect to the closing lines of the "Elegies," which have been inserted in the hymn-book of the Positivist Church. They are "truly grand lines," as Mr. Frederic Harrison calls them, and by their virtue, if by any, the author may claim to be remembered with the greater poets. Yet even in this noble passage it is not so much the dawning glory of what is to be that stirs the heart, as the pathos of the lesser extinguished lights—the thought that for the buried there is, in Thomas Hood's words, "no resurrection in the minds of men." Out of grief for her own lost and their inevitable failure from memory, the poet rises into a bitter outcry for the generations of unremembered dead, for the frustration of innumerable hopes and the mockery of love, for all the terrible waste of time; her hymn of triumph to the imperial Future is even more a dirge of divine sorrow for the Past:

> Vain broken promise of unfinished lives!
> From your untimely ashes what survives?
> Who shall fulfil your unlived half of life?
> Who win the crown of your unfoughten strife? . . .
> Yet, long-lost sister! can a soul like thine
> Drop from the march of Nature's foremost line
> So early, so unmissed? Can all her pride
> In that rich promise be so cast aside?
> Oh, long-lost brother! Shall the myriad years
> Make plain to Man this mystery of tears?
> Shall light come ever to this blind sad Earth
> That knows not what is death nor what is birth?
> It will, but not to me. Earth yet shall know,
> By a new light, the secret of her past,
> Shall ask no more, "Why do I suffer so?"
> But smile in one great harmony at last.
> And we, with faith in what we shall not see,
> May call the dead whose tomb is in our heart,
> To rise and take their own unconscious part
> Of service in the glory that shall be.
> For, could we link their memories to the chain
> Of souls whose lights in long procession move
> From Past to Future, so might yearning love
> Behold their buried beauty live again,
> To glide with solemn purifying glow
> Along the endless way the ages go;
> Might joy o'er something added—casting in
> Such jewels—to the world's great treasure heap;
> And here and there some living souls might win
> To reverent fellowship with the souls that sleep.
>
> Oh, perfect Race to be! Oh, perfect Time!
> Maturity of Earth's unhappy youth!
> Race whose undazzled eyes shall see the truth,
> Made wise by all the errors of your prime!
> Oh, Bliss and Beauty of the ideal Day!
> Forget not, when your march has reached its goal,
> The rich and reckless waste of heart and soul
> You left so far behind you on your way!
> Forget not, Earth, when thou shalt stretch thy hands
> In blessing o'er thy happy sons and daughters,
> And lift in triumph thy maternal head,
> Circling the sun with music from all lands,
> In anthems like the noise of many waters—
> Forget not, Earth, thy disappointed Dead!
> Forget not, Earth, thy disinherited!
> Forget not the forgotten! Keep a strain
> Of divine sorrow in sweet undertone
> For all the dead who lived and died in vain!
> Imperial Future, when in countless train
> The generations lead thee to thy throne,
> Forget not the Forgotten and Unknown!

VI.

I have accomplished my design, which was no more than to give a setting to quotations from a poem, exquisite in a way, but not great enough to ensure that the volume in which it occurs will ever be reprinted. Doing this, I have left myself no space to call attention to the passages of rare beauty that are scattered through Miss Shore's other poems. Of her dramas, I am not so sure. They are vivid in a way, not lacking in plot and resource; but the action, by its very intensity of inner passion, affects one as somehow unreal, as if it were the creation of one who brooded upon the world in solitude. Her true quality as a poet, apart from the "Elegies," is found rather in the fragmentary relics of "Irene's Dream," in which memories of Emily united with the author's love of elf-haunted gardens to evoke a fairy-land, now filled with sounds like the faint sobbing of creatures imagined in the forest, now penetrated by

> A wild small music like to tinkling laughter.

It is by right of such poems as these that she takes her place, not with dishonor, among the group of feminine poets of the last century, of whom Christina Rossetti was the chief, and who added a new charm of refinement to English letters. P. E. M.

BIBLIOGRAPHICAL NOTES ON POE—I.

One of the most valuable contributions made by Prof. James A. Harrison to our knowledge of Poe is his bibliography of Poe's writings in the sixteenth volume of his "Virginia Edition" of Poe. Here he attempted to catalogue everything that Poe ever published, regardless of its length or its importance. The task attempted was no easy one. For, contrary to the popular notion, Poe was one of the most prolific of our writers, Professor Harrison's list including nearly five hundred items, and his edition of Poe's works extending to no less than sixteen volumes. Moreover, Poe published many of his articles anonymously, and some things in the most out-of-the-way places. Hence it is not to be wondered at if this list lacks somewhat on the side of completeness. Among articles omitted that had appeared in other editions of Poe are the instalment of "Marginalia," published in *Graham's Magazine* in March, 1848, and an editorial on Christopher North originally published in the *Broadway Journal* of October 4, 1845, but included by Griswold and others in the "Marginalia." There are also some items that have been pointed out since the "Virginia Poe" appeared, notably several articles assigned to Poe by B. B. Minor, in his book on the *Southern Literary Messenger*, and some variant versions of the poems and tales to which Prof. George E. Woodberry first called attention in his recent revised life of Poe. But besides these, there are a number of articles written by Poe that have not, so far as I can learn, been given to him by any one. These, it should be said in justice to others who have gleaned in this field, are both slight in volume and, except for three or four of them, of but little worth as literature, most of them being either editorials or book-reviews; but they are fairly numerous. There are also some eight or ten variant versions of the poems and tales that have been overlooked.

In enumerating these additions to the bibliography of Poe, I shall present first the additions that are to be made to the body of Poe's essays, reserving for a later instalment of this article a discussion of the variant versions of the poems and tales. The additions to the canon of Poe's essays are to be found in the following periodicals: *Burton's Gentleman's Magazine*, *Graham's Magazine*, the *Weekly Mirror*, the *Broadway Journal*, and the *Democratic Review*.

The articles in *Burton's Magazine* are these:

(1.) Twelve brief reviews in the issue of September, 1839, of which the longest are the notices of Mary Howitt's "Birds and Flowers," "The Bride of Fort Edward," and Schoolcraft's "Algic Researches." Professor Harrison gives only four of the eighteen critical notices in this number to Poe, whereas Poe says in a letter to P. P. Cooke ("Virginia Poe," XVII, 53) that he wrote all except the first three. According to this, one of the articles given to Poe in Professor Harrison's list—Glenn's "Reply to the Critics"—should really be assigned to another writer.

(2.) A compilation entitled "Gymnastics and Gymnasia" in the issue of October, 1839. This Poe acknowledges in a letter to Snodgrass of October 7, 1839.

Other articles in *Burton's* that were probably written by Poe are: (1) "The Game of Cricket," November, 1839; (2) "A Chapter on Science and Art," March, 1840; (3) brief reviews, April, 1840; and (4) a notice of Brooks's "The Utility of Classical Studies," May, 1840. In a well-known letter to Burton written June 1, 1840, Poe specifies the number of pages that he had contributed to the *Gentleman's Magazine*, and it is necessary to give each of these items to him in order to make out the total which he claims (though even that fails for April, 1840); besides, several of the articles betray internal evidence of Poe's authorship.

Hitherto unnoted articles contributed by Poe to *Graham's Magazine* are the following:

(3.) The review of G. P. R. James's "The Ancient Régime," October, 1841. Shown to be Poe's by a reference back to the review of James's "Corse de Leon" in *Graham's* for June of that year.

(4.) Brief notices (besides those mentioned in Professor Harrison's list) in *Graham's* for March, 1842—among them a further notice of the work of G. P. R. James, in which Poe repeats the old charge of imitativeness, and a notice of Mrs. Sigourney, in which he complains of a lack of unity in her poems.

(5.) Three brief notices in *Graham's* for May, 1842: Hoffmann's "The Vigil of Faith," Griswold's "The Poets and Poetry of America," and Simms's "Beauchampe." Circumstantial evidence supports the ascription in each case, and the notice of Griswold's book refers forward to Poe's acknowledged review of that work in the issue of the following month.

Two other brief articles in *Graham's* that are almost surely Poe's are the notices of Cooper's "Deerslayer" in the issue of October, 1841, and of Park's "Pantology" in the issue of March, 1842.

The unaccredited articles in the New York *Mirror* are both more numerous and more significant. Ever since the appearance of N. P. Willis's article in defence of Poe in 1849, it has been known that Poe wrote for the *Mirror* in 1844-45. Despite this fact, no list of his contributions has ever been printed; Willis's statement that Poe's connection with the paper was merely that of a "mechanical paragraphist" perhaps discouraged any inquiry into the matter. Most of Poe's articles, it seems, appeared first in the columns of the *Evening Mirror*, a daily, whence they were copied into the *Weekly Mirror*. I have been unable to see a file of the *Evening Mirror*, hence I record here only those articles—so far as I can identify them—that appeared (or reappeared) in the *Weekly Mirror*. Two such articles, the comment on Mrs. Browning, in the issue of December 7, 1844, and the critique entitled "Longfellow's Waif—A Few More Words For and Against It," in the issue of January 25, 1845—have already been specifically ascribed to Poe by Professor Woodberry. Others are as follows:

(6.) "The Alphadelphia Tocsin," a brief note, in the issue of January 18, 1845. This reappeared as the third item in the "Marginalia," published in the *Democratic Review* for July, 1846.

(7.) "Does the Drama of the Day Deserve Support?" January 18, 1845. Also embodied in the "Marginalia" of July, 1846.

(8.) "Lowell's Conversations," January 18, 1845. The last two paragraphs of this review are the same as the first two paragraphs of the "Marginalia" item printed in the "Virginia Poe," XVI, 69-70.

(9.) "Nature and Art," January 25, 1845. A reply to a criticism in the New York *Tribune* of the preceding article on "Lowell's Conversations."

(10.) "Longfellow's Waif," January 25, 1845. The seventh paragraph of this article reappears in the "Marginalia" printed in the "Virginia Poe," XVI, 73.

(11.) "Post-Notes by the Critic," January 25, 1845. This is a counter-reply to a reply of "H." of Boston to Poe's strictures on Lowell.

(12.) "Increase of Poetical Heresy," February 8, 1845. An essay of about a thousand words on "the heresy of the didactic"—perhaps the "prefatory remarks" of Poe's lecture at Boston on October 16, 1845 (see Woodberry's "Life of Poe," II, 150). In substance very much the same as Poe's essay on "The Poetic Principle," but more compact and quite different from it in phrasing, except for the last paragraph, which reappears in part, in very much the same words, in the eleventh paragraph of "The Poetic Principle" ("Virginia Poe," XIV, 271-2). This is one of the most substantial and spirited of Poe's essays, and should by all means be included in his published works.

(13.) "Magazine Literature," February 15, 1845. Republished in part in the "Marginalia," "Virginia Edition," XVI, 82.

(14.) "Imitation-Plagiarism," February 22, 1845. I can find no verbal correspondence between this article and any fully accredited composition of Poe's, but the views expressed in it fall in very well with Poe's views on plagiarism, as expressed in the "Longfellow War"; and the ascription also derives strong support from circumstantial evidence. The article is vigorously written, and is quite worthy of a place among Poe's collected works.

(15.) "Plagiarism," February 22, 1845. This has to do with the alleged plagiarism by James Aldrich, from Hood's poems. It reappeared, except for the last paragraph, in Poe's first letter in reply to "Outis" ("Virginia Edition," 44-46).

Besides these articles, there are in the *Weekly Mirror* the following editorials and criticisms which are probably to be assigned to Poe:

(1) "The Pay for Periodical Writing," October 19 1844; (2) "Hoffmann's Poems," December 14, 1844; (3) "A Slander which Needs Immediate Contradiction" (a refutation of a charge of plagiarism that had been brought against Mrs. Ellet), January 25, 1845; (4) "Poems. By Christopher Pease (*sic*) Cranch," January 25, 1845; (5) "Pay of American Authors," February 1, 1845; (6) "Literary" (being notes on current magazines and forthcoming publications), February 15, 1845; and (7) "Graham's for March," February 22, 1845.

Poe's articles in the *Broadway Journal*, which he edited for almost a year, are to be numbered by the hundred. Here he republished nearly half of his poems, and more than forty of his tales, in most cases affixing his signature. But he also brought out here a vast amount of editorial and critical matter that had not been printed before; and the bulk of this he published anonymously. In a set of the *Journal* which he presented to Mrs. Whitman, and which has happily been preserved (being, I be-

lieve, now in the possession of F. R. Halsey of New York city), Poe designated as his own a number of his unsigned articles by inserting after them the initials "P." or "E. A. P." (see the "Virginia Poe," XII, viii, and XVI, 372). It is but reasonable to suppose that in thus reclaiming his waifs he overlooked some; and it may very well be that he was unwilling to acknowledge some of the rest. But, be that as it may, it is obvious that he did not designate as his own everything that actually belongs to him. The following additions are to be made to the list that Professor Harrison gives:

(16.) "Miscellanea," in the issue of May 31, 1845. Extremely flimsy, but obviously Poe's.

(17.) A brief note on a Wiley and Putnam edition of Hood's works, August 2, 1845. Acknowledged in the fuller notice of the same book in the issue of August 9, 1845.

(18.) "Editorial Miscellany," August 16, 1845. This contains, among other things, Poe's denial of the charge that he was utterly blind to the merits of Longfellow's productions.

(19.) "Editorial Miscellany," August 23, 1845. Contains an allusion, obviously by Poe, to his trip to Boston in the summer of 1845.

(20.) "Editorial Miscellany," August 30, 1845. One item deals with the Boston *Notion's* blunder in copying from *Bentley's Miscellany*, with a laudatory notice, "The Fall of the House of Usher," in ignorance of the fact that it was Poe's, after having publicly held the story up to ridicule on its original appearance in America, under Poe's name. Another item has to do with a poem which was printed in the New York *Tribune* of August 27, 1845, above the signature "E. A. P.," but which Poe disclaims having written.

(21.) "Editorial Miscellany," September 13, 1845. A brief note concerning the botching of "Lenore" in a contemporary newspaper.

(22.) "Editorial Miscellany," September 20, 1845. In one item, the author alludes to "Mesmeric Revelation," as his own; in another, he displays his characteristic fondness for exposing literary theft by charging Whittier with a plagiarism from Bulwer.

(23.) A review of Mathews's "Big Abel and the Little Manhattan," September 27, 1845. The same review, considerably enlarged, appeared in *Godey's Lady's Book* for November, 1845 ("Virginia Poe," XIII, 73 f.).

(24.) "Editorial Miscellany," September 27, 1845. Shown to be Poe's by a reference back to the "Editorial Miscellany" of the immediately preceding issue.

(25.) "Editorial Miscellany," October 11, 1845. Contains a sharp rejoinder to a criticism in the *Mirror* of Poe's article on Christopher North in the *Broadway Journal* for October 4. This article is well worth reprinting.

(26.) "Editorial Miscellany," December 6, 1845. Authenticated by a reference, clearly by Poe, to the Boston fiasco, in which he had figured in October.

(27.) "Critical Notices" and "Editorial Miscellany," December 27, 1845. The former is stamped as Poe's by the sneering reference to Boston as "Frogpondium"; the latter contains a comment on a letter concerning "The Case of M. Valdemar."

It is likely that Poe also wrote the following articles published in the *Broadway Journal:*

(1) The note on the *Southern Literary Messenger*, March 22, 1845: (2) "The Magazines," April 5, 1845; (3) brief reviews and "The Magazines," April 12 1845; (4) the reviews of "Night: A Poem" and Leigh Hunt's "Imagination and Fancy," April 19, 1845; (5) "Halleck's Alnwick Castle," May 3, 1845; (6) book reviews and the article on the "Broadway Theatre," May 10, 1845; (7) the notice of Anthon's "A Pilgrimage to Treves," June 21, 1845; (8) the notice of Hazlitt's "The Age of Elizabeth," July 19, 1845; (9) "Editorial Miscellany," August 2, 1845; (10) the notice of J. T. Headley, August 9, 1845; (11) "Critical Notices" and "Editorial Miscellany," November 8, 1845; (12) "Critical Notices," November 15, 1845. And it is not improbable that Poe also wrote most of the articles on "The Drama," and many of those on "The Fine Arts," during the second half of the year.

Poe's articles in the *Democratic Review* that are not included in Professor Harrison's list are but two in number, and one of these was apparently known to Ingram either in the form in which it appeared there or in some other form. These two articles are:

(28) A brief instalment of the "Marginalia" printed in the *Democratic Review* for July, 1846; and

(29) A notice of Poe's poet friend, Mrs. Lewis, entitled "The Literati of New York. S. Anna Lewis," in the issue of August, 1848.

The first of these is a signed article; the other is credited to Poe in the table of contents at the beginning of the volume. The "Marginalia" article deals with six topics: (1) an error in a French translation of Lady Morgan's "Letters on Italy"; (2) the alleged decline of the drama (previously printed in the *Weekly Mirror* of January 18, 1845); (3) the "Alphadelphia Tocsin" (also in the *Weekly Mirror* of January 18, 1845); (4) Simms's "Areytos"; (5) Goethe's "Sorrows of Werther"; and (6) Cranch's poems. Of these, the first, third, fifth, and sixth were published by Ingram among his "Addenda" to the "Marginalia" (see his edition of Poe, Edinburgh, 1875, III, 471, 477-8). The article on Mrs. Lewis—which was apparently meant as a final number of the "Literati"—reappeared in considerably amplified form in the *Southern Literary Messenger* for September, 1848.

NEW FIELDS FOR PHILOLOGY.

TO THE EDITOR OF THE NATION:

SIR: It is, alas, true, as your editorial writer tells us, that "with philologists one is ever in the realm of the imagination" (*Nation*, December 16). But, sir, you must not be content merely to state the phenomenon, when the cause is patent. Why do you not find philologists settled among you in the land of fact? Because the instant they appear at your gate, you deport them, as undesirable aliens, back to the land of hypothesis, from which they came. You persist in regarding philology as the infirm elder sister of palæontology and archæology, when, in fact, she might be the most modern and up-to-date of sciences. Your editorial shows this. "Old Saxon," "Old English," "The sands of Turkestan," "King Alfred"—these are the data you give philology to play with. What wonder, then, that the disappointed bride of Mercury makes the moonbeams dance about them? But give her a place in the sciences of to-day, sir, and you shall find her practical, accurate, invaluable. Philology is in the midst of us; let us recognize the fact and give her room.

When Broughton Brandenburg brought to a credulous contemporary of yours an article purporting to be by Grover Cleveland, did its editor submit the article to philology for verification of the claim? Did he ask for information as to the dialectal indications, the proportional use of the split infinitive, and the dangling participle, the number and average length of Latin and Greek polysyllables, the rhythmical sequences of sentences, in this article, as compared with similar phenomena in the ex-President's acknowledged work? Not at all; he asked the opinion of the executor of the estate, a lawyer. What was the result? Discredit upon the name of a great man, and trouble to the erring newspaper.

At our universities philological methods are not to be relegated to the sands of Turkestan. American soil offers them equally fertile fields. It was only last week, in reading examination papers, that I came across the statement apropos of Carlyle, that hypochondria was a skin disease, prevalent in Germany. I thought little of it till, some fifty papers further on, I read the same alarming fact concerning German influence on the hero-worshipper. At once my philological training was awake, and the most amazing results were obtained. Both students were agreed that Johnson's Dictionary "made such a hit that the world could scarcely believe it had been written by an American," and that the same writer "never used a word of one syllable when one of two syllables would suffice"; that Macaulay's "Ides of Rome" was their favorite reading in preparatory school, and that Mr. Newman Lounsbury was the author of an article entitled "The Downfall of the English Language." By a minute comparison of misspelled words and other interesting phenomena, I proved conclusively that paper A was the ultimate and only source of paper B, and that, in all probability, no intermediate source need be looked for. I called student B into my office, and said to him, "Kleptomania is a skin disease prevalent in America. Have you anything to tell me?"

"Sure," he replied, without hesitation; "you're wise to A and me, all right."

Here, then, is a field for new uses of philology. The day will come when the pedant will sit in the court room next the handwriting expert and the alienist, drawing the same enormous fees. May it come quickly! PHILOLOGIST.

New Haven, Conn., December 16.

LITERARY COINCIDENCE.

TO THE EDITOR OF THE NATION:

SIR: A good illustration lies before me of the possibilities of literary coincidence.

The earliest of our American dramatic histories is that by William Dunlap, published in 1832, and reprinted the following year in England. Dunlap's book, "The History of the American Theatre," covers the first eighty years, or the first half, of our real dramatic life. Dunlap was a man of wide acquaintance, whose own intimate personal knowledge of the American stage extended back, in 1832, more than fifty years. For forty-four years he had been a professional playwright, part of the time for his own theatre. His first play, acted as early as 1789, escaped by only two years the honor of being the earliest stage comedy to be written by a native-born American. Dunlap's "History of the American Theatre" is therefore of very great value, whether as a history of the stage or of the drama in this country, and it has served as a basis for most of the later accounts of its period.

The latest of our dramatic histories, and also the most elaborate of them, comprises volumes XIX and XX of a larger work, published in London in 1903 (according to the title page of Set No. 25, owned by the Chicago Public Library), under the general title, "The Drama: Its History, Etc." This work is carefully printed upon paper bearing its own water mark, in an edition limited to one thousand sets; and it has as editor-in-chief, Alfred Bates, A. M., of Trinity College, Cambridge, with John P. Lamberton, A. M., of the library of the University of Pennsylvania, and James P. Boyd, A. M., of Lafayette College, named as associate editors. I can explain the discrepancy between the brilliancy of these names and the facts as to the text of the volumes mentioned only by supposing that the editors entrusted the investigation of a not very well-known field to assistants; for a large part of Dunlap's history has been taken over bodily into this work, without so much as a referenee or a quotation mark—physically, corporally, literally taken over, not only idea for idea, but bone for bone. I illustrate at random:

From Dunlap, page 3:

It is well known that the state of the drama was in 1750 much more brilliant than it has been for the last half-century, or is now in Great Britain. The best and greatest men of the country wrote plays and attended their performance. The pit of the theatre was the resort of wit and learning; while fashion, beauty, taste, and refinement, the proud and exclusive aristocracy of the land, took their stations in the boxes, surrounding the assemblage of poets and critics below.

From The Drama, page 6:

It is well known that the British drama was, in 1750, in a much more flourishing condition than it has been for the last half-century, or is at the present day. The best and greatest men of the country wrote plays and attended their performance. The pit of the theatre was the resort of wit and learning, while fashion, beauty, taste, and refinement, the proud and exclusive aristocracy of the land, took their stations in the boxes, surrounding the assemblage of poets and critics below.

Even Dunlap's occasional flights of rhetoric are reproduced verbally with the rest.

The texts run parallel in this manner for well-nigh a hundred of Dunlap's pages, barring a few cuts and a few blunders in copying. In one place the modern historian even omits a section of his 1832 text, and neglects to notice that the pronoun subject of the succeeding sentence has its antecedent in the part cut away.

ARCHÆOLOGICAL TROUBLES AT ATHENS.

To the Editor of The Nation:

Sir: Our newspapers have recently printed brief allusions to a most violent attack made upon Mr. Kavvadias, the Ephor-General of Antiquities at Athens. The charges are very sweeping, not to say reckless, and without careful investigation it is impossible to know how far any of them are true. Some of them are undoubtedly false, and as certain of the statements involve the relations of Mr. Kavvadias with the foreign schools, the latter have issued the following statement, which I translate from the Athens *Hestia* of November 24:

In its leading editorial of November 22, the *Chronos*, which is regarded as the chief organ of the Military Alliance, contains a series of charges against Professor Kavvadias, the Ephor-General of Antiquities and secretary of the Archæological Society. We should have no right to take part in an affair which is purely Greek, if the article had not contained a number of insulting statements about the foreign archæological schools; against these it is fitting that we should protest. It is true that, in their issue of November 24, the managers of the *Chronos*, who in the meantime had learned of our indignation, declare that "they were misled in regard to the charges." They have, however, withdrawn no one of them, and we are therefore unable to consider that satisfaction has been given.

(1.) They charge that "we do our work by means of the money of the Greek Archæological Society to the benefit of our own governments and of our private scientific interests." We explicitly declare that all the work of our schools has been carried on at our own expense. Greece has had no part in it, except to provide for the inspection of excavations and the custody of things found, and in certain cases for the expropriation of land. All these matters have been managed to the profit of Greece alone.

(2.) They charge that, because Mr. Kavvadias has coöperated with us and has shown favoritism toward us, the Greeks have been shut out from all archæological work, ever since the time that "he handed over the most important excavations to foreign archæologists, thus casting reproach on the scientific standing of Greece, and giving glory to the outside world." We are deeply grateful not only to the Ephor-General, but to all the ephors and the directors of museums, for their good will toward our work, the good will which they have so generously extended to ourselves. We, however, recall the fact to notice that we were granted permission to undertake the most important excavations by the Greek government and by the Senate. There can therefore be no question about measures that were unauthorized, and we vigorously protest against all suspicion of favoritism toward us on the part of any one whomsoever. It is so far from being the case that archæological work on the part of the Greeks has been excluded (the slanderous charge of the *Chronos*), that we need only to enumerate the important undertakings which have been carried through by Greek men of science, under Mr. Kavvadias's administration, during the last twenty-five years. The excavations of the Athenian Acropolis, of Eleusis, of Oropus, of Thoricus, of Sunium, of Eretria and Chalcis, of Thebes and Chæronæ, of Dimini, Sesklo, and Pagasæ, of Thermus, of Cephallenia, of the Lycæum and of Lycosura, of Gytheum and Vaphio, of Mycenæ, of Epidaurus of Syra, Paros, and Naxos—to mention only the better known excavations. Then there is the raising of the antiquities at Anticythera, and the maintenance and restoration of ancient monuments (the Parthenon, Erechtheum, Epidaurus, Bassæ, Mystra, etc.), which have been carried out with admirable method; further, there is the rich series of publications which has made known the scientific results of all this work, and the exemplary organization of the Athenian and provincial museums. These things are a sufficient proof of the scientific work of the Greeks, which Mr. Kavvadias is accused of having excluded. We find it strange that the *Chronos* has abandoned to us the defence of this Greek work.

(3.) It is actually pretended further that our governments and scientific bodies have repaid the favors of Mr. Kavvadias by decorations and honors. How does one dare to suppose that there is any such trafficking as this with the title of member of the Academy in Berlin or Paris, or with that of the honorary doctorate at Cambridge and Leipzig? These are honors awarded only to the most distinguished scholars.

(4.) Finally, we are charged with having contempt for Greece: "They look upon the rest of Greece (Mr. Kavvadias excepted) as the *Orient*."

It is enough to recall the fact that the first International Archæological Congress was held in Athens; that in Athens is established the permanent committee which organizes all future congresses. If the unanimous opinion of the entire scientific world has accorded to Athens her ancient position as the metropolis in the study of antiquity, what clearer proof can there be that honor is given to Greece?

The foregoing statement is signed for the Germans by Professor Dörpfeld and Professor Karo, for the Americans by Mr. Hill, for the Austrians by Dr. von Premerstein, for the French by Mr. Chamonard (in the absence of the director, Mr. Holleaux), and for the British by Mr. Dawkins.

J. R. WHEELER.

Columbia University, December 12.

[Since the above letter was written, it is reported that Mr. Kavvadias has left Greece and that Mr. Tsountas has assumed the duties of the Ephor-General's office.—Ed. Nation.]

FRENCH ACCENTS.

To the Editor of The Nation:

Sir: The explanation of Mr. Gustav Pollak's query concerning the poet Heredia's name in your issue of the 16th seems simple. If, as we may suppose, the poet always signed himself José, in the Spanish form, manifestly naturalization did not include the name as well as the person: hence José Heredia, without accents in the surname. Written or printed Hérédia, the natural French form, the forename should consistently appear as Joseph; but a man cannot prevent encyclopædists and others from taking liberties of the kind noted.

D. R.

New York, December 19.

To the Editor of The Nation:

Sir: No "learning," only common sense, is required to solve the problem of "French accents on proper nouns." The accent is determined by the pronunciation of a name. If Casimir-Périer or M. Clémenceau ever wrote their names without an accent they were wrong, and wrong through carelessness, a very common thing, by the way, with French writers, who are not so accurate, or fussy, with proper names as Americans. The now universally accepted spelling of Fénelon is with one accent, as that is the standard pronunciation of the name. As for Hérédia, since the author became and is counted a Frenchman, the two accents are in order, because they are needed for the French pronunciation.

PEDAGOGUE.

Cornell University, December 19.

FOOTBALL IN THE OLD DAYS.

To the Editor of The Nation:

Sir: As some of your readers may care to know how football was played in the good old times, I send you the following extract from "The Anatomie of Abuses," by Phillip Stubbes, London, 1583, p. 184:

For as concerning foothall playing, I protest unto you it may rather be called a freendly kinde of fight then a play or recreation: a bloody and murthering practice, then a felowly sporte or pastime. For dooth not every one lye in waight for his adversarie seeking to overthrowe him and to picke him on his nose, though it be uppon hard stones? in ditch, or dale, in valley or hil, or what place soever it be, hee carcth not, so he have him down. And he that can serve the most of this fashion, he is counted the only felow, and who but he? So that by this meanes sometime their legs, sometime their armes; sometime one part thurst out of joint, sometime an other, sometime the noses gush out with blood, sometime their eyes start out; and sometimes hurt in one place, sometimes in another. But whosoever scapeth away the best goeth not scotfree, but is either sore wounded, craised and bruseed, so as he dyeth of it, or els scapeth very hardly. And no mervaile, for they have the sleight, to meet one betwixt two, to dashe him against the hart with their elbowes, to hit him under the shut ribbes with their griped fists, and with their knees to catch him upon the hip, and to pick him on his neck, with a hundered such murdering devices: and hereof groweth envie, malice, rancour, cholor, hatred, displeasure, enmitie, and what not els: and sometimes fighting, brawling, contention, quarrel picking, murther, homicide, and great effusion of blood, as experience dayly teacheth. Joseph de Perott.

Worcester, Mass., December 16.

MRS. COOLIDGE'S "CHINESE IMMIGRATION."

To the Editor of The Nation:

Sir: In your recent review of Mrs. Coolidge's "Chinese Immigration" (December 9), you make a remark regarding the holding of the book out of the market for a few weeks, which may require a word of explanation from us.

Soon after the publication of the book, an American who had held a high position in China complained to us that certain passages in the book did him injustice, and later he told us that they bore evidence of having been instigated by a specific political enemy.

The author found on examination that one of the passages contained at least a technical misstatement which affected the color of some of the other passages. In consequence the book was withdrawn until she had submitted substitutes, which were ultimately inserted.

While this was going on a great flurry regarding the book appeared in the San Francisco papers, and was echoed in the New York papers, but no specific complaints reached us.

We think you go too far in intimating that such occurrences are inconsistent with "the care with which publishers usually examine works dealing with living persons or matters of current discussion." Books are not newspaper editorials or correspondence, and to submit them to corresponding scrutiny is out of the question: it would involve almost as much research as writing them. The merits of the case in question, for instance, we have found it impracticable really to know anything about. The utmost "care" that publishers can ordinarily exercise is having in their contracts a clause in which the author agrees to hold them harmless from charges of libel.

Henry Holt & Co.

New York, December 17.

Literature.

SHACKLETON'S EXPEDITION TOWARDS THE SOUTH POLE.

The Heart of the Antarctic: Being the Story of the British Antarctic Expedition, 1907-1909. By E. H. Shackleton. Two volumes. Philadelphia: J. B. Lippincott Co. $10 net.

Lieut. Shackleton's—or, as we ought now to say, Sir Ernest Shackleton's—book comes very opportunely to divert our minds from some of the less pleasant associations that have lately surrounded polar exploration, while at the same time it helps us to realize the amazing courage and powers of endurance which the exploration of either Arctic or Antarctic region demands. It carries us into a part of the globe far less familiar to most of us than are the northern circumpolar islands and seas; and more various, because, instead of an ocean, there is a continent with great diversities of surface and general physical character, and, in particular, with several huge volcanoes.

The narrative fills the first volume and half of the second, and includes (1) the voyage out from New Zealand to the winter quarters on the shore of Ross Sea, in latitude 77° 30′ south longitude 163° east; (2) the winter life spent there, and the ascent of the great volcano named Mount Erebus (from one of his ships) by James Clark Ross, the first explorer of these regions, eighty years ago; (3) the journey in the summer of 1908 from these winter quarters right south to latitude 88° 23′, the furthest point yet reached; (4) the journey back from this point to the winter quarters, with (5) minor explorations along the coast by small parties, and (6) an expedition to the South Magnetic Pole, which was visited for the first time. These are the narrative parts. Following a recent custom, the advantages of which are now generally admitted, the records of scientific investigations are relegated to the appendices which occupy the remaining half of the second volume. They include notes and observations on Antarctic biology, on geology (with additional notes on Mount Erebus and its eruptions); descriptions of moraines and of the effects of the summer sun on different varieties of ice and snow; physics, chemistry, and mineralogy, as studied in the magnetic phenomena and the Aurora Australis; notes on cloud forms and other meteorological phenomena, on health-conditions, and on the results of a search made for certain doubtful islands. Many scientific results of great novelty and value have been collected, as might be expected where the field of research had been entered by so few previous voyagers, hardly any of whom were equipped for the purposes of scientific inquiry. Among the most remarkable facts is the presence, at latitude 85° south, of several seams of coal in a sandstone supposed to be of palæozoic age, with a piece of fossil which proved under the microscope to be part of the stem of a coniferous tree. To-day, no vegetation of a higher order than mosses, lichens, and funguses appears to exist in these frozen wastes. In the Arctic regions, also, coal has been found at very high latitudes, but not so high as these of the Antarctic.

Valuable, however, as are the scientific results set forth in these volumes, and interesting as are the numerous illustrations, it is to the narrative of the explorations that the reader will turn with most curiosity. He will not be disappointed. The tale of the voyage out, of the life on this bleak shore through the long night of winter (at a temperature never rising above the freezing point, and usually far below zero), and, above all, the description of the two journeys—the one towards the South Pole, which was not reached, and the other to the Magnetic Pole, which was reached—are of the highest interest. The story is told in a perfectly direct and simple fashion, so that we seem to follow the travellers mile by mile and day to day, realizing the difficulties they had to encounter, and the hardships they endured, and admiring both their hardihood and their patience. There is no rhetorical embellishment of the narrative, but the facts are sufficiently new and strange to make such embellishment needless; nor are picturesque touches wanting. The bare facts plainly and feelingly told give one a better notion of what are the perils and discomforts of low temperatures, of furious blizzards, and of plodding or climbing over ice and snow and dropping into concealed crevasses, than the most highly finished descriptions could.

Specially remarkable is the account of the longest land journey, that in which an attempt was made to reach the South Pole. The start was from the winter quarters at Cape Royal on McMurdo Sound on October 29, 1908, in fine spring weather, brilliant sunshine, and a cloudless sky. The party consisted of Lieutenant Shackleton and three others. They had four Manchurian ponies, drawing each an eleven-foot sledge. Their route ran at first cross the vast plain of sea ice, which lies behind the great ice barrier, fronting to Ross Sea, the barrier which stopped the progress of Sir J. C. Ross's expedition in 1841, and again in 1842. On December 3, they turned inland and began to ascend with infinite diffi-

culty a gigantic glacier, in many places steep and badly crevassed. By this time, three of the ponies had been so worn out that it had become necessary to kill them, and the fourth perished in a crevasse on December 7. Henceforth, they had to drag their sledges, for now there were but two, by their own strength, up steep inclines and over rough ice. On December 24, having risen more than 9,000 feet above sea level, and consumed a great part of their supplies, they discarded one of their sledges, and pressed on over what had now become an almost level, but very lofty plateau, much of it between 10,000 and 11,000 feet high, so that the difficulty of respiration increased the fatigue of hauling. By this time, food was beginning to run short, constant hunger and the savage frost had reduced the travellers' strength, and from time to time, progress was stopped by terrific blizzards, against which it was impossible to make headway, so that the four had to lie all day and night inside their sleeping bags, waiting for the wind to abate. Finally, on January 9, finding that the food left was barely sufficient to take them back to the nearest depot, where a small supply had been stored on the outward march, they stopped, being then in latitude 88 degrees 23 minutes south, longitude 162 east, ninety-seven geographical miles from the Pole.

The journey back took seven weeks, and frequently during those weeks they all but despaired of effecting their return, so weakened had they become by exposure, fatigue, and incessant hunger, with body temperatures constantly subnormal. Had they not succeeded in picking up the route and finding all the provisions which had been stored in the depots along it, the whole party must have perished. It was a splendid dash, and though the goal was not won, the point reached was far beyond that theretofore attained by any explorer, and the discovery of a vast mass of high land surrounding the Pole and standing from 10,000 to 12,000 above the sea is an addition to our knowledge well worth the labor. The mountain scenery all along the route southward is described as extremely grand and solemn. On each side of the great glacier, towering cliffs, sometimes of granite or gneiss, sometimes of sandstone, rise to vast heights. The impression on the explorers is such as it rarely falls to the lot of men to receive:

> It was with feelings of keen curiosity, mingled with awe, that we watched the new mountains, never seen before by human eyes, rise from the great unknown that lay ahead of us. Mighty peaks they were, the eternal snows at their bases, and their rough-hewn forms rising high towards the sky. No man of us could tell what we would discover in our march south, what wonders might not be revealed to us, and our imaginations would take wings until a stumble in the snow, the sharp pangs of hunger, or the dull ache of physical weariness brought back our attention to the needs of the immediate present.
>
> As the days wore on and mountain after mountain came into view, grimly majestic, the consciousness of our insignificance seemed to grow upon us. We were but four tiny black specks crawling slowly and painfully across the white plain and bending our puny strength to the task of wrestling from nature secrets preserved inviolate through all the ages (Vol. I, p. 292).

It is impossible to peruse the narratives of these journeys accomplished under difficulties both numerous and trying, without a stronger feeling than we ever had before of the efforts of which the human frame and spirit are capable. The best parallel within our knowledge is to be found in the marvellous North Polar voyage of Dr. Fridthjof Nansen. It is, of course, true that the conditions of life in latitudes of intense cold are much better understood than formerly and that experience has suggested many appliances and mechanical devices as well as many kinds of food and clothing, formerly little thought of. A novel experiment was tried by Lieutenant Shackleton when he took out an automobile in the hope—a hope which proved vain—of using it over the smooth and more level ice tracts. But all these considerations, though they explain the increasingly frequent success of more recent expeditions as compared with those of sixty years ago, do not lessen our admiration for the courage and resource shown by Shackleton and his comrades.

Space fails us to dwell upon many of the interesting episodes of the expedition. Mount Erebus, discovered by Ross in 1841, the most southerly known volcano, was climbed, and its geological structure determined. It is very ancient, the present cone and crater (13,210 feet in height) being the third central point of eruption that can be traced, but is still frequently active. Interesting observations were made of the habits of the seals and penguins, which, with the skua gulls, and two or three species of whale, are the only mammalia that inhabit these Antarctic solitudes. The long account of the ways of the penguins in particular, is full of facts, curiously illustrative of the respective parts which instinct and a sort of reasoning play in directing the actions of these birds. Some are honest, some habitually steal from one another, and the behavior of the latter, when in fear of detection, is highly entertaining. So is their treatment of their young. (Vol. II, pp. 246-265.) Atmospheric phenomena were observed with much care, and the descriptions of the formation of clouds over the icefields and of the frequent and splendid displays of Aurora Australis provide new data for the meteorologist.

For most Europeans and Americans, the North Polar regions have, ever since those early days when men still hoped to find a northwest passage of commercial value, commanded far more attention than the Antarctic has done. Yet in one way the interest of the latter is greater. For a long time it has been pretty well known that the North Polar area is occupied by sea, and the sea, as Homer long ago said, "yields no vintage." The "wandering fields of barren foam" are monotonous, and (except to the marine-biologist) uninstructive. To be "the first that ever burst into a silent sea" is good; but to be the first to explore a silent and unknown land, with all its varieties of surface, its orography and geology and mineralogy to explore, is much better. It is a fortunate thing that this new land has found one who can describe it with so much freshness and graphic simplicity as Sir Ernest Shackleton has here shown.

CURRENT FICTION.

A Reformer by Proxy. By John Parkinson. New York: John Lane Co.

Social satire, in the hands of the very latest novelists—Mr. Hewlett, Mr. Locke, and the rest—has learned to present itself under the lightest and most whimsical guises. The sledgehammer of Dickens, the chisel of Thackeray, long ago proclaimed themselves as relics which, like the dagger and the blunderbuss, are for the harmless adornment of the antiquary's walls, not for use in this advanced and advancing day. Other days, other weapons: our very detectivists (to venture a new and needed coinage) have abandoned the brickbat and the bare bodkin in favor of subtle gas or devastating mosquito. How much more scrupulous the satirist in his choice of killing tool! Mr. Parkinson belongs, it must be admitted, to the older school. He is "out" against middle-class respectability, "gigmanity," and insincere conventions. His plan of campaign has a superficial novelty.

We are accustomed to the young man of free and "artistic" temperament who refuses to be bound by the laws of the family and social life into which he has been born, and makes ducks and drakes of everybody's prepossessions, to the eternal glory of himself and his kind. In the present story this type appears only in the Prologue, where we find him making his crucial decision in fatally defying authority and respectability embodied in the two commercial uncles upon whom he is dependent. When the story proper opens, we learn that he has stuck by his guns, thrown up his uncles, lived his own life, and, with the aid of a woman, made a fortune. The money has been made in Canada, chiefly through speculation in stocks. In dying—for he does die, of course—he determines to do what he can for the salvation of a nephew in England, who he fears is about to waste

his life attending to the respectabilities. He leaves him a legacy on condition that he shall make a certain amount of money in the stock market within a given time. The widow is commissioned to see that the condition is enforced. She is further enjoined, for reasons which insufficiently appear, to present herself to the virtuous English relatives as her husband's mistress. Hence obvious complications, which eventually lead to the enlightenment (by way of stock-gambling) of the nephew, and the comfortable reception of the widow into English society. Of course, the thing is more absurd in summary than in the full narrative, which has a good deal of humor.

It is remarkable that the author and his very well-known publisher should have been able to agree upon a mode of punctuation in which so many unusual duties are thrust upon the comma.

On the Lightship. By Herman Knickerbocker Vielé. New York: Duffield & Co.

Fortunately, the work of the late Herman Knickerbocker Vielé is too well known for this posthumous volume of his to demand extended characterization. Fortunately, we say, for the range is wide, the matter various. Yet so far as the manner goes, that is always suave, polished, and efficient. These tales told "On the Lightship" were, as Mr. Janvier informs us in the introduction, to have been framed "in an encircling story, describing and duly accounting for the chance assemblage aboard a vessel of that unusual type." The story-teller's death has precluded this consummation, but it could not deprive us of the short stories themselves, the real stuff of the projected volume. Sometimes of an undisguisable slightness, these tales are, collectively, stamped with the cosmopolitanism of the author no less than with his good taste. Modern as they mostly are, one of the most praiseworthy is a daring account of Francis Bacon's entry into authorship, and of his fateful tenancy of Kit Marlowe's vacated lodgings, with its "small oak box secluded in a corner, . . . a chest of papers left by [the] last lodger," and its account of Shakespeare's careless signing of a "Romeo" he did not write. Here the due atmosphere is cleverly imparted to a picture which is itself managed with deft touches. We wish that there were space at our disposal to quote the smoking-lesson imparted by a sea-faring person with a long-stemmed pipe to Master Francis (who went pale) and to the player, Shakespeare. The directions are themselves eloquent:

> I pray you, gentlemen, hold not the pipe too lightly, lest it be overset and mar your garments, he instructed them. And by your leave, it must be grasped between the thumb and second finger, nicely balanced that the forearm grow not weary. Should the brain become afflicted by the vapor it is well to pause and inhale some breaths of common air. Extend the finger carelessly.

But all the tales are not of Shakespeare's time. One of the best is of the Washington Square of A. D. 1909.

The Socialist. By Guy Thorne. New York: G. P. Putnam's Sons.

Mr. Thorne's story tells of the conversion to Socialism of an English duke who owns a "huge slice" of London. Rescued from kidnappers by a party of "slummers," he is taken unconscious to the house of the high-priest of Socialism, one Fabian Rose; is there nursed into health by Socialist hands, and ends by embracing their cause, even to the sacrifice of a large part of his property. Not all of it, for these new friends of his defer to a far-off future the abolition of private property, content for the immediate hour to regulate ownership. The moral of the book is this, that neither acts of Parliament nor even the altruistic doctrine of university settlements can reorganize society, because they cannot reorganize character. The Christian way is the only way; its motto "For all who want work, work! for those who won't work, hunger! But for the old and infirm, provision." The traditional views of the aristocratic order find their mouthpiece in the Lord Bishop, a courtly prelate, implacable in social doctrine.

The Socialist group with which the young duke's fortunes are cast is intent on promulgating its ideas through the drama. We hear much of the founding of an educational theatre, of a new play by the great Fabian Rose; of a young actress who is chosen as the Socialists' instrument, and is made first a devotee that she may act the more effectively. She it is who on the opening night of the theatre and the great play, completes the reformation of the duke, the teacher naturally and subsequently going with the thing taught. A book of upheaval, it wages its war courteously and on the loftiest grounds. To criticise it as a story would be beside the mark. Incidentally, what are "a fierce and lambent sense of anger"? and "a state of lambent enthusiasm"?

Big John Baldwin. By Wilson Vance. New York: Henry Holt & Co.

This book, as we are told, is edited from

> Extracts from the journal of an officer of Cromwell's army, recording some of his experiences at the court of Charles I, and subsequently at that of the Lord Protector and on the Fields of Love and War, and finally in the Colony of Virginia.

It is the autobiography of a young giant from the Fen country, who is first found refusing for a pup a pound offered by Mr. Oliver Cromwell, who had ridden over with the Rev. Elijah Balsley to preach and sup at Baldwinsmere. The sixteen-year-old John is a huge cub, hampered by his own skin and kept within only by Puritan principles. Later, he is adequately described by his sweetheart as "the dearest, bravest, truest, greatest, most unselfish, wrong-headed obstinate, conceited, and transparently honest and sincere old stupid of a Jack-the-Giant-Killer that ever was!" Even from among his horses and dogs, he keeps an eye upon Cromwell as a chosen vessel for the defeat of Anti-Christ, and he eagerly serves under him when the time for action comes. The narrative differs from most stories of the period in that the hero, though a partisan, gives his personal affections to Charles as well as to Cromwell. His warm friendships include Prince Rupert, and the family of the Lord General. In truth, Big John has the gift which attaches to first-person heroes. He makes conquest of all he meets. At court, the King yearns over him and makes bid for his allegiance. Rupert risks life to be at his wedding. Cromwell stands self-confessed as one "whom thou hast defeated as no other mortal ever hath"—for Sir John opposed even the Protector when he differed from him; was but a half-hearted regicide, and after the Irish massacres demanded leave to go home, "never to take up arms again, save in a righteous cause righteously maintained."

The founding of a colony in Virginia occupies the concluding third of the book. Here, as throughout, Sir John stands out bodily as a fine old autocrat, dealing generously with his neighbors, and if his colonists will not of themselves be happy, forcing them to be so. In spite of lavish portions of Presbyterian preaching and of mutual admiration among kings and commons, the book gives an interesting picture of the time in old world and new, with more of the domestic than the military. Here, too, is a portrait gallery of several extremely engaging subjects.

CHATEAUBRIAND.

Chateaubriand and His Court of Women. By Francis Gribble. With six photogravure portraits. New York: Chas. Scribner's Sons. $3.75 net.

"There is no adequate life of Chateaubriand in any language, and there is no life at all in English," writes Mr. Gribble in his preface. His conclusion is that the times are ripe for "a synoptic view." It is, then, with the obvious purpose of supplying our lack in furnishing that "synoptic view" that Mr. Gribble offers us this book; and the work is to be judged on higher ground than that suggested by the lure of its hero's amorous passages. That higher ground proves over-slippery, even for Mr. Gribble's nimble wit. His man was a greater one than he represents him; but one may let that pass and proceed to

specific issues. Much has been written about Chateaubriand, and Mr. Gribble has no doubt read a large part of those writings: what use has he made of his materials? In the chapters dealing with his subject's American adventures, he has, seemingly, listened to the too skeptical Professor Bédier of the "Etudes critiques." Had he perused the dissertation of Dr. Madison Stathers he would hardly assert so nonchalantly that

> Most likely the only rivers on whose waters he really floated were the Hudson and the Delaware; most likely the only forests in whose vastnesses he lost himself were those in the immediate vicinity of New York.

To suggest that Mr. Gribble is here too doubting a witness is not to express an unreserved acceptance of Chateaubriand's own unsupported testimony. There are no two ways about the traveller's having "romanticised" his "Voyage en Amérique." Only, certain details of that "voyage" have been pretty definitely verified that were scoffed at by M. Bédier; and Mr. Gribble, following, in these pages, close at the other's heels, has scoffed in his turn a little indiscreetly. Take the interview with George Washington, for example: "Chateaubriand, then, never saw Washington at all, or saw him only, as any one might have seen him, from a Philadelphia sidewalk." Mr. Gribble would scarcely have written these words had he read, either in the "Publications of the Modern Language Association," June, 1907, or in an article in the *Atlantic Monthly*, April, 1908, the copy of a letter of introduction carried to Washington by "M. de Combourg" (Chateaubriand), and signed by "Colonel Armand" (the Marquis de la Rouërie).

The truth is, Mr. Gribble has not been greatly interested in presenting an account of Chateaubriand that is veracious, in all its details. We fear that his fine phrase, "a synoptic view," is an afterthought, an apology. The writer has made great haste to get his hero out of American forests and English embarrassments into "society": that he might ensconce him comfortably in his "court of women." For here he is at home, this writer; and he has unexceptionable guides. In writing of the great romanticist enthroned among "the madames," Mr. Gribble has something to say of "the real Chateaubriand." His real Chateaubriand is "the Catholic Childe Harold, with a dash, and perhaps rather more than a dash, of Don Juan." There is throughout, less of dignity, less of romance, than of a cynicism which seems at times almost too facile. One feels that the portraits executed of Chateaubriand at different stages of his career are too much tainted by this cynicism; so, not less, are the portraits of more than one lady, loving or loved. There is certainly a variety of these personages; enough for the most exacting reader. Charlotte Ives is the type of unsophisticated maiden, or first love (later she reappears as a widow with three sons); there is the consumptive Pauline de Beaumont, forgotten for Delphine de Custine, "Queen of Roses"; and Natalie de Noailles-Mouchy, the Duchesse de Duras, Madame de C——, the Marquise de V——, have each her chapter, and her photogravure. As for Hortense Allart de Méritens, to say that she was a Roussellian blue-stocking is sufficiently to condemn her. Mr. Gribble makes no effort to lend a kind of edification even to the long *liaison* with Madame Récamier. He is an Englishman, and there is, perhaps, not a line in his book to shock the squeamish; and yet his very punctuation has a sinister squint; his . . . are prurient. and his dashes pander. There is, in all this, something of the naughtiness of a Sterne without the allurement. One cannot accuse Mr. Gribble of wanting a certain sprightliness. What one must not expect of him is valuable literary criticism of Chateaubriand, or even an informing account of Chateaubriand's journalism and political course. This is neither the "synoptic" nor the "ultimate" biography.

Early Church History to A. D. 313. By Henry Melvill Gwatkin, Dixie Professor of Ecclesiastical History at the University of Cambridge. Two volumes. New York: The Macmillan Co. $5.25 net.

"The history of the Church of God is in its widest compass co-extensive with the history of the universe itself." This is an extraordinary sentence with which to begin a history of the early church, and it does not awaken confidence in the scientific character of the work. A little farther on the author continues:

> If then the Gospel is a revelation of the eternal through facts of time, it cannot be treated simply as one religion among others. Given the revelation of God, comparative religion may help to show us how the forces of human nature clothed it with religions of men; but the application of comparative religion to the revelation itself is a fundamental error. We therefore start from the position that church history is simply the spiritual side of universal history, just as economic history is its economic side.

We had supposed that such transcendental points of view had been forever abandoned in historical writing, and to come upon them in the work of a Cambridge professor is a distinct shock. Nor are we greatly reassured by the concession:

> Nevertheless, it is usually convenient to narrow again the meaning of church history by leaving out of its direct purview everything that took place before the coming of the Lord, or outside the visible societies which trace their origin to him; and this is the common use of the term. By thus limiting the subject we give it more unity and cut off some of the isolated matters which few students can discuss at first hand.

That it is only convenience or custom which makes church history a history of the church instead of an account of the religious life of the world at large or of the dealings of God with the human race—what could be more delightfully naïve and archaic! We are carried in imagination out of the garish light of modern science into the sacred and cloistered shades of a mediæval school of theology.

If by chance we have taken up the book because interested in the history of the early church, we shall probably lay it down at this point, for, however edifying it may be, it can certainly have no historical value. But if we read further we shall find that it is a mistake to judge the work by its opening pages. The theologian soon becomes the historian, and the result is on the whole a very respectable history of the early church. The work is not of the highest class, to be sure. It displays little historical imagination, constructive genius, real insight, or apprehension of the great controlling forces which made the Christian movement what it was. Moreover, the apostolic age, to which only twenty meagre and unsatisfactory pages are devoted, is treated in an altogether uncritical and conventional fashion. It is a pity that the traditional boundaries of the theological disciplines, to say nothing of the dogmatic views of the theologians, should lead to so sharp a division between the apostolic and the post-apostolic age. The latter cannot possibly be understood apart from the former, and such a summary as is given in chapter iv is worse than useless, for it only obscures the significance of the period of beginnings.

The long chapter on Gnosticism is far from satisfactory, and the results of recent investigations receive scant attention. This last is, in fact, a notable fault of the book which appears at many points. There is throughout too much dependence on the work of certain Cambridge scholars of the older school, as the singularly defective bibliographies at the close of each chapter only too pointedly suggest. Less than justice is done to Ignatius, Bishop of Antioch, the greatest genius of the sub-apostolic age, when it is said "his words are rather sparkles of intense conviction than utterances of any profound thought" (p. 99). But in this judgment the author agrees with no less an authority than Harnack. Irenæus, too, fails to come to his full rights, for there is no recognition of the remarkable service he performed in combining the legal and mystical

principles of the early church, and laying down the framework of Catholic theology for all the centuries to come. Professor Gwatkin, however, is not alone in thus overlooking the significance of the old Bishop of Lyons. He has rarely received the credit which belongs to him as the most widely and permanently influential theologian of the ancient church.

On the other hand, Origen, Tertullian, and Cyprian are admirably handled, and Bishop Callixtus of Rome, who has all too commonly been unqualifiedly condemned in accordance with the judgment of his enemy Hippolytus, receives due recognition for his important services to the Western church. The chapters on the Christian Life, the Churches and the Church, Montanism, and Discipline Questions, are also very good. In fact, while the work has many glaring defects and is sadly lacking in unity, there are some excellent chapters, fair, accurate, and discriminating. Taken as a whole, the book, in spite of the apologetic emphasis of the early chapters, is commendably free from party spirit, and though by an Anglican clergyman, is not marred by the bias of a high and narrow ecclesiasticism.

American Inland Waterways. By Herbert Quick. New York: G. P. Putnam's Sons. $3.50 net.

In Mr. Quick's new book we have a rather impassioned and somewhat visionary study of our inland waterways in their broadest aspects, particularly in their relation to the national welfare, to the railways, and with respect to their restoration, extension, and maintenance for all the purposes involved in the present-day conservation movement. It was Bacon who said that three things are necessary to make a nation great and prosperous: "a fertile soil, busy workshops, and easy conveyance for men and commodities." Mr. Quick observes, in calling attention to this statement, that we have the first two of these prime requisites; but whether we shall make the most of our natural resources and of our industrial development must depend, to a large degree, upon the facilities which are available for carrying our products to the world's market.

Attention is directed to the strenuous efforts which other nations—our industrial and commercial rivals—have made in the past and continue to make in developing their inland waterways as an instrument in reducing transportation charges. In this connection, the work which has been accomplished in European countries is detailed. More particular reference is made to the activities of the Canadians in improving the St. Lawrence in order to turn toward Montreal an increasingly large volume of commerce, to the detriment of New York. We are reminded also of the other waterways now in construction, or projected, which promise added advantages to other Canadian cities, in the heart of the continent. How the United States is to meet this situation, is the present writer's theme.

Enthusiasm seems to have carried him far beyond the realm of possibilities, for he proposes a scheme which, even though it were practicable, would involve the expenditure of considerably more money than could be commanded by the government for such a purpose prior, at all events, to the completion of the Panama Canal. Briefly, the inland waterways should be developed as a single system with uniform depths and widths of channels, so that vessels of a standard draft may be used. Under such conditions, barges could be billed to any point on the national system of waterways just as railway freight cars may be billed to far distant stations, provided the connecting lines are of a uniform gauge. But the waterways must also be conserved to meet other needs. The writer looks forward to the time when the burning of coal will be permitted only when it can be shown that water-power is not available for the desired purpose; when a "muddied" stream will constitute proof of crime in the district where the silt originates, and when the land will be dotted with reservoirs whose contents will furnish the water necessary to make the channels of all rivers sufficiently deep for navigation purposes in time of drought:

In those days the "blight of continental distances" will be removed. From Pembina on the north, Great Falls on the northwest, and Sackett's Harbor on the northeast, down to the Gulf, will run the new seaboard, and the same ships will ply the lakes in summer and carry cargoes to the tropics in winter.

This volume is the latest addition of the publishers to their American Waterways Series. It is profusely illustrated, and, so far as workmanship is concerned, is of exceptional excellence.

Notes.

Prof. Wilbur Cross's book on "The Life and Times of Laurence Sterne," only recently issued, is to be followed by a biography of Sterne by Lewis Melville.

Early in the new year the Putnams will publish a book by Julius Chambers entitled "The Mississippi River," which will be included in the American Waterways Series. Here one may look for an account of the great river from its sources to the sea, of its place in romance, in religion, in diplomacy, in war, and in peace.

D. G. Hogarth is the author of a book which the Macmillan Co. announces for early issue under the title "Accidents of an Antiquary's Life." The author is a well-known English traveller and explorer, and Dr. Arthur Evans's successor as keeper of the Ashmolean Museum at Oxford. The new book will deal with adventures in Greece and Asia Minor and will be fully illustrated.

The Charities Publication Committee of New York announces for early issue in 1910 "Our Slavic Fellow Citizens," a study of Slav immigration both abroad and in the United States, by Prof. Emily Greene Balch of Wellesley College. Another promised volume is a handbook on housing reform by Lawrence Veiller, former deputy commissioner of the Tenement House Department; and the full findings of the well-known Pittsburgh survey will be brought out by the committee in six volumes as publications of the Russell Sage Foundation.

For those persons who still believe that Thackeray was a naughty cynic—hard, cold, and unfeeling—we can think of no better fate than to receive "The Sense and Sentiment of Thackeray"—being selections compiled from his works and correspondence by Mrs. Charles Mason Fairbanks (Harper & Bros.). To be sure, this will be no punishment; but is it not the season of peace and good will? Thackeray is reputed to be one of women's severest judges; his cruelty toward the cruel sex is often alleged against him by suffragette-critics. Mrs. Fairbanks has brought together here a series of passages in praise of woman which quite convince us that Thackeray was as other men. And if Eve had not eaten of that apple, he writes in a "Letter to His Mother," and her children "had gone on living forever quite happy in a smirking paradisiacal nudity, it wouldn't have been half the world it is!"

The "Poems of Winthrop Mackworth Praed," selected and arranged by Ferris Greenslet, forms the latest issue of that delightful series of special editions printed at the Riverside Press for Houghton Mifflin Co. It happened by chance that the writer of this note had just read through Praed's works in the standard two-volume edition when this selection came into his hands. He was struck by the great service rendered to such a poet as Praed by this expurgation of the feeble and faulty. The failures of a great poet may have their value, but in the case of a writer whose only strength is finesse, every dull page, every flat line, is a distinct diminution of the reader's pleasure. Praed as he stands after Mr. Greenslet's winnowing is pure gold, without a redundancy and with nothing lacking. Possibly the tale of "The Red Fisherman" is not so impressive as the editor believes, and the present writer would hesitate to give it a place in preference to "The Eve of Battle"; but its omission would have left the collection without an example of the tales, and it has at least a pleasant savor of "Ingoldsby." The editor was certainly wise in including all five of the "Every-Day Characters" and in setting them at the head of the volume. There is nothing in English more perfectly charming in their kind than "The Vicar" and "Quince." Here Praed is something more than the maker of *vers de société*, yet their tone blends easily with "The County Ball" and "Good Night to the Season," which are the very quintessence of the *genre*.

A presentable example of ornate, yet

tasteful, bookmaking is issued by G. P. Putnam's Sons in their edition of Cicero "On Friendship" and of Emerson's essay on the same subject, with decorations by Edith and Mildred Cowles. These colored decorations, consisting of more or less conventionalized floral patterns of unobtrusive quality, are unquestionably the distinction of the volume. In addition to the text of the essays, the book offers on the pages facing the text a collection of maxims, "old and new, bearing upon the same theme as the essays themselves." The type from which this book of friendship is printed has an admirable clearness and simplicity.

Van Wyck Brooks's criticism of American civilization and of American institutions, which is very attractively issued through Mitchell Kennerley under the title "The Wine of the Puritans," loses somewhat by the want (as it seems to us) of a guiding principle or central idea. Yet much of the criticism, aptly phrased by the lay figures of a sustained dialogue, is telling enough; as that which, expressed as a rhetorical question, we may reproduce:

> Do we not condescend to allow life itself an economic value, the office hour being the real criterion by which we measure these things ["religion and recreation and literature"] and to which we accommodate them all? We take our exercise, not primarily because we love exercise, but because we can do our work better for it. We read, not primarily because we love reading, but to rest our minds from our work.

There are here a whole sheaf of really excellent little sermons, phrased with a more than common cleverness—if only the right people will read them!

The plays of Robert Greene, with notes and introduction by Thomas H. Dickinson, form a welcome addition to the Mermaid Series (Scribner), of a dramatic author hitherto not easily and inexpensively accessible in his completeness. One can scarcely avoid observing that this volume departs somewhat from the traditions of the series. It is more candid about the basis of the text and more solicitous about collation and early editions and dates than most of its predecessors. Furthermore, the introduction occupies nearly sixty closely printed pages, which is from two to three times the length of the light and alluring prefaces provided by such polite penmen as Ellis, Symonds, Swinburne, *et al.* The difference is not merely in length, nor is it wholly to the advantage of the latest editor. A novice in dramatic lore or a mere layman could pick up one of the earlier issues, and in a few minutes pass pleasantly through the induction to a new author. Not so with the strenuously historical-critical prologue to Greene, dense with argumentative detail; packed with allusion, bristling with points of reference. Only the hardened Elizabethan scholar of the new school, familiar with the whole field of pre-Shakespearean drama, feeling an ardent interest in minute points of chronology, and acquainted with the opinions on Greene put forth by Dyce, Grosart, Ward, Gayley, Churton Collins, and others—only such a reader will make his way through this introduction intelligently and with proper edification. To those who have not kept in touch with the Greene literature, Mr. Dickinson's frequent air of threshing things out for the first time may easily make his discussion appear more "originative," to use one of his own words, than it really is, especially in regard to the crux of recent controversy, the dating of the plays. It accepts the same plays as the much criticised edition of Collins, prints them in the same order (the order defended by Gayley, also), and with similar reference to Greene's dependence on Marlowe; but it fortifies with every available probability the position of those who believe that Greene commenced his dramatic work about 1587, instead of about 1591. The merit of this edition is not in the absolute determination of vexed points, but in the rejection of eccentric conjecture and in assembling in pretty solid form the biographical and critical materials prepared by the more judicious forerunners.

Dutch tenacity and Irish good humor were happily blended in the man who for above fifty years was the middle term between China and the Occident. In "Sir Robert Hart: The Romance of a Great Career" (E. P. Dutton & Co.) we have a true story told by his niece, Juliet Bredon, while the portraits and more than a score of illustrations help us to know the man amid the surroundings in which his unique success was won. The Dutch Captain Van Hardt, who came to Ireland with King William III, distinguished himself in the Battle of the Boyne, and received the township of Kilmoriarty as a reward, was his ancestor. Hart fed his soul with Emerson's Essays, came under the inspiring influence of Dr. McCosh, afterwards of Princeton, and, receiving nomination to consular service, reached China in 1854, serving there until 1908.

There, as the greatest of the alien advisers, whom the Chinese, like the Japanese, engaged to assist them in bridging the chasm between ancient and modern life, Robert Hart was known in the ordinary conversation of foreigners in China as the I. G. (inspector-general). He gained the full confidence of his employers by asking no personal favors, by unremitting toil, and by an honesty that seemed in China to savor of the unearthly. He made many fast friends, though not all his fellow-Britishers understood him. After Hart had virtually established China's credit and opened the river of silver that flowed in from the customs, he established the postal system, and acted as diplomatic factotum. More than once he averted war, at the cost, in one case, of $50,000 spent in telegrams to Europe. After the siege of Peking, he took up his manifold labors again, but though his hands might be Briarean and his shoulders those of Atlas, his brain refused to rest in the night hours. To escape insomnia he returned home to rest, leaving his career behind him with no frayed edges that could tangle. He had fulfilled all his ambitions. He was offered the post of British minister, which he declined. Decorated no fewer than twenty-four times, with sixteen jewels to wear, thirteen of which were Grand Crosses, he never wore any of them when he could help it, and never more than one at a time. Some one described him as "a small insignificant Irishman." The narrative is exceedingly well written, with no fulsome praise. Some stress is laid upon remarkable coincidences and things prophetic in youth, while anecdotes brighten the story. The pen pictures of Li Hung Chang, "Chinese" Gordon, of Alcock, Wade, and Harry Parkes, and other figures of the past half century in China, are clearly drawn.

In 1905 the American Historical Association appointed a committee of eight to consider the question of the teaching of history in the elementary schools. The report of this committee has now been issued in the form of a small book of 141 pages (Charles Scribner's Sons). It consists of an introduction stating the nature of the problem and setting forth the point of view adopted, an elaborate outline of a course of historical study for all grades from the first to the eighth, and various appendices on method, subsidiary subjects such as constitutional history and civics, hints for the teacher, illustrative material, etc. The members of the committee have been manifestly influenced by French and German models in their recommendation that the ultimate end and aim of elementary historical instruction should be patriotic, that is, the explanation of "the America of to-day, its civilization, its institutions, and its traditions." Their plan is worked out very minutely in chapters devoted to each grade, with topics, suggestions, and titles of books. Criticism of the scheme must await the test of application. As it stands it seems artificial and overladen with subjects and detail. It has, on the other hand, an admirable simplicity of purpose, whether or not we approve of patriotism as the chief objective point. If nothing more than the formulation of a common plan be gained, the report will have justified its existence, and we can but hope that its value will be put to the proof. The worst feature is the final bibliography, of which the committee should be heartily ashamed. At best the list is a poor one, but it is rendered a positive menace to the teacher by the carelessness with which it has been compiled. Some of the names and initials are wrong, a score of titles are grotesquely incorrect, and publishers' names are sometimes given and sometimes not. To cap the climax, Rhodes's history (long since complete in seven volumes), is allowed but four volumes, though a fifth, we are told, is announced by the publisher!

The second volume of the "Acts of the Privy Council of England," edited by William Lawson Grant, Beit lecturer in colonial history in the University of Oxford, and James Munro, university assistant in history in the University of Edinburgh, will be published at the end of the current month. Besides materials for the history of the Continental colonies, the volume will contain a great deal of matter relating to Barbados, including several appeals from that island to the council. It will cover the period from 1681 to 1720.

Edgcumbe Staley's "Famous Women of Florence" (Scribner) is an extraordinary compound of wide but ill-digested and inaccurate erudition, puerile invention, and fustian rhetoric. Since William Godwin's romancing life of Chaucer the world has hardly seen the like. At no point can one trust Mr. Staley. His Italian is shockingly printed, his identifications of portraits often purely fanciful and sometimes impossible, his attributions of pictures absurdly erroneous. No statement can be taken without verification. Dante's Beatrice, Lucrezia Tornabuoni, La Simonetta,

of Giuliano de' Medici, Giovanna degli Albizzi, Alessandra—"the Mother of the Strozzi," Leonardo's Mona Lisa, and Bianca Capello are his seven heroines. In every case he naturally gives full credit to legend. He finds La Simonetta's features in half the contemporary paintings of Florence. About her he has evidently read prodigiously, but, characteristically, not the single work that might have set him right, Herbert Horne's "Botticelli." Since its handsome form and attractive illustrations might impose it upon the unwary we have given undeserved space to a grotesquely bad book.

"Men and Manners of Old Florence" (Chicago: A. C. McClurg & Co.) represents certain of Commendatore Guido Biagi's too rare excursions in general letters. Most of the material, including the forty-nine collotype illustrations, is unhackneyed and much of it inedited. The first of the five essays describes Florence at the time of Dante. The second passes to Boccaccio's day, and is upon the MS. "Book of Good Examples and Good Manners" of Messer Paolo, son of Pace of Certaldo. Messer Paolo is a precious repository of sapiency, and his examples prove that Tuscan canniness has not altered with the passing centuries. Among his maxims are: "Be not so bitter that every man spitteth thee out of his mouth, nor yet so sweet that every man sucketh thee dry." More distinctly moral is the counsel not to take money fraudulently; "That thou mayest not have to render it again, which would seem too hard for thee." Paolo quotes with unction from a nameless wise man the saying: "Whosoever cheateth thee once, God will curse him; whosoever cheateth thee twice God will curse him and thee; but if thou art cheated thrice, God will curse thee alone." A reading of this Tuscan Poor Richard will show that long before Messrs. Papini and William James had exchanged compliments, pragmatic morals were thoroughly understood in Florence. From miscellaneous sources our author displays the growing luxury and looseness of living as Florence passes into the Renaissance. His picture of the fullblown prime of humanism is set about the figure of the courtesan Tullia of Arragon. Her beauty and wit attached to her at one time or another most of the poets worth having beside an impressive following of non-literary notabilities. Six of those at Rome once challenged the world to disprove that she "by reason of her infinite virtue" was not "the most meritorious of all women of the past, present, or future age." Nobody drew blade to prove the contrary. She spent much of her life in evading the humiliations of her conditions, succeeded only in part, and died in the odor of piety, leaving certain meritorious sonnets which are thought to be chiefly of Benedetto Varchi's framing. Here the book skips two centuries and a half and ends with post-Napoleonic Florence—the return of Ferdinand III, the last days of the Countess of Albany, momentary apparitions of Byron and Shelley, and such glimpses of the new Italy as Leopardi and the infant Victor Emmanuel. This chapter is an extensive *genre* scene most delicately and faithfully drawn, and possibly the most engaging feature of a thoroughly delightful book. Except for a venial misprint or two we note no error except the attribution of Matteo Palmieri's Assumption of the Virgin to Botticelli. Criticism has rightly relegated this heretical composition to the satellite Francesco Botticini.

Frederick Greenwood, the first editor of the *Pall Mall Gazette*, and founder, with several of his associates on that journal, of the *St. James Gazette*, died in London December 16. His books include two volumes on the third Napoleon, a "Lover's Lexicon," and a study of dreams.

George Park Fisher, the theologian, died December 20, at Litchfield, Conn., in his eighty-third year. He was born at Wrentham, Mass., and was a graduate of Brown University (1847). He was also a student at the Yale Divinity School, the Andover Theological Seminary, and in Germany. In 1854 he was appointed to the Livingston professorship of divinity at Yale, and also college preacher. Seven years later he was appointed to the congenial professorship of ecclesiastical history, and in 1865 he brought out his first book, a volume of essays on "The Supernatural Origin of Christianity," with special reference to the theory of Renan and Strauss. The following year he published a life of the elder Silliman, and, in 1873, one of his most noted works, the "History of the Reformation." Between 1880 and 1884 came out his "Early Christian Literature Primers"; in 1882, "The Christian Religion," which was translated into Japanese; "The Grounds of Theistic and Christian Belief" (1883), and "Outlines of Universal History" (1885). Like the last book cited, his "History of the Christian Church" (1888) has been extensively used as a standard text book; and in rapid succession, during the ensuing years, have come his "Manual of Christian Evidences" (1890), a brief work setting forth the principal topics of definition and proof in reference to revealed religion; "Nature and Method of Revelation" (1890), with its argument adapted to meet pantheism; "The Colonial Era" (1892); a "Manual of Natural Theology" (1893); his "History of Christian Doctrine" (1896); "Brief History of Nations" (1896), and "Edwards on the Trinity," etc. (1903). For several years, beginning in 1866, Professor Fisher was an editor of the *New Englander*, and he was a contributor to a number of the reviews. At the Yale Divinity School he was probably the most eminent successor of a line of theologians who were leaders in the development, in more liberal directions, of the stern old creed of New England Congregationalism. Though never active in politics, he was a leader in that Yale group which, in 1884, broke away from the Republican party. Never afterward did he acknowledge any party tie, although an eager advocate of reforms in the tariff, in the civil service, etc., and an opponent to jingoism.

Charles Ledyard Norton, formerly editor of the *Christian Union*, the *Domestic Union*, the *American Canoeist*, and *Outing*, died at Sandwich, Mass., December 15, in his seventy-third year. He was a graduate of Yale College (1859) and served in the civil war, commanding the Seventy-eighth—a negro regular regiment. He was the author of several books for boys, of "A Handbook of Florida," and of "Political Americanisms."

From India is reported the death of Romesh Tutc, C. I. E., who latterly occupied the post of Revenue Minister of Baroda. He was the author of two romances, "The Lake of Palms" and "The Slave Girl of Agra."

Science.

The Cambridge Natural History. Vol. IV. *Crustacea and Arachnids.* New York: The Macmillan Co. $4.25 net.

The last volume of the ten books of natural history, composing the series issued by the University of Cambridge (England), has now appeared. Its editors may well be congratulated upon the completion of such an undertaking, whose vastness and difficulty can be adequately appreciated only by the skilled zoölogist. It covers the whole field of animal life from the protozoa to the mammals. That the volume under notice, the fourth of the series, should be the last to appear, is due to the fact that the death of Prof. W. F. B. Weldon, to whom had been assigned the crustacea, occurred while he was at work on this important section. The task thus sadly interrupted was taken up by Geoffrey Smith, who has wrought his part admirably, utilizing such of Professor Weldon's materials as were available; these being limited chiefly to the Brachiopoda.

This fourth volume of the natural history embraces the crustacea and arachnida. Following the characteristics of the preceding volumes, it is not intended for popular reading, but for the use of students of biology, who wish to make themselves thoroughly acquainted with the interesting forms of animal life with which it concerns itself. And the importance of the crustaceans and arachnids appears from the fact that, with the insecta and myriapoda, they make up the great group of the arthropoda, which, in number of species and individuals, is the dominant one on our planet, and furnishes some of the most interesting examples of instinctive habits, challenging comparison with those exhibited by the vertebrates. The student of biology who turns to this volume will not be disappointed in its value as a serviceable hand-book. Even the intelligent general reader will find much to attract attention. Perhaps the nearest approach to what may be regarded as "popular" treatment occurs in that part of Cecil Warburton's work on Araneæ (the spiders) which relates to their habits. Those who have been interested in the widely credited traditions that have associated various historic personages with spiders in their susceptibility to music, will find that this writer unites with other araneologists in scouting such stories. Mr. Warburton, in his studies, has made free use of such American authorities as Dr. McCook's "American Spiders and Their Spinning-work," Professor and Mrs. Peckham's unique and interesting studies, the val-

uable publications of Professor Emerton, the work of the late Dr. Marx. Nor has he forgotten Professor Hentz, the pioneer of our rather small group of American students of these animals. It is pleasant to record that full and generous credit is given to the authors thus drawn upon. And it is no less pleasant to observe how numerous, clear, and satisfactory are the drawings that illustrate the text.

"The Mammals of Colorado," by Prof. Edwin R. Warren, is one of the books to be issued early in 1910 through the Putnams. The volume will be thoroughly illustrated with photographs and diagrams.

R. W. Sindall's "Manufacture of Paper" (D. Van Nostrand Co.) gives a full survey of the various processes employed in the making of paper, and discusses with chemical knowledge the different fibres available. The book will be of practical service to those who purchase as to those who manufacture paper.

Hilary Bauerman, for many years professor of metallurgy at the Ordnance College, Woolwich, England, has died. He was the author of an important study of the "Metallurgy of Iron," was the editor of an enlarged edition of Phillips's "Elements," and for the Longman series of Textbooks of Science wrote volumes on "Systematic Mineralogy" and "Descriptive Mineralogy." Much of his writing was done for the technical journals.

Drama.

Having given representations of tragedy, melodrama, a social problem play, and a romance, the New Theatre, in the proper discharge of its functions as a stock company house, has now made its first essay in the interpretation of artificial comedy. Its performance of "The School for Scandal," admirable in many respects, was, nevertheless, in its general effect distinctly disappointing. And the significant point is that this result was due, apparently, not so much to the individual incapacity of any of the players—for there was no noticeably weak spot in the cast—as to a deliberate and mistaken attempt on the part of the responsible managers to renovate Sheridan's masterpiece by expressing it, as nearly as possible, in terms of modern realism. They were wholly justified, beyond question, in suppressing certain purely theatrical extravagances—the gross caricature of Moses, for example—which have accumulated in the course of years, and were as absurd as they were inartistic, but they were grievously in error in trying to modernize speech and action to the detriment of comic force. There is no good reason for endeavoring to bring "The School for Scandal" up to date. The achievement, even if desirable, would be impossible, except by rewriting, a task which madness itself would gambol from. The play is a satirical picture of eighteenth century, not twentieth century, life and manners, and the speech and the action are in accordance with the habits, domestic and theatrical, of that time. Both are formal and harmonize perfectly in their formality. Manifestly, the play, if presented as a classic example of a bygone period of literary and dramatic art, must be given in the spirit and manner of Sheridan, which involve, indisputably, a certain measure of exaggeration. To dilute the humor of it, by a failure to give due emphasis to the calculated wit of the dialogue, or by undue restraint of the exuberance of action, which not only matches the wit, but is essential to its full pictorial expression, is to misrepresent it. Moreover, any effort to transform the characters into contemporaneous personalities must result in an over-accentuation of the artifice in the language which is put into their mouths.

In a word, the whole play is a piece of extraordinarily brilliant artifice, although it is at the same time a marvellously truthful exposition of ordinary human frailties. It owes its immortality, not to the eternal verities contained in it, but to the richness of the literary and dramatic humor with which it is charged. The liberation of this humor is the prime object to be aimed at in stage representation, and in this the performance of the New Theatre was only partly successful. Unfortunately the realistic process employed was most mischievous in the most vital scenes. The auction, the quarrel between Sir Peter and Lady Teazle, and the famous screen scene, though successful by virtue of their own inherent qualities, fell a long way short of their legitimate effect. They were played skilfully, smoothly, intelligently, and, in a way, naturally; but innumerable good points, not only in delivery but by-play—almost sanctified by the best usage—were either missed altogether, or so badly slurred that they passed for nothing. The actors seemed to be laboring under severe restriction, and their work, though sound, was devoid of all brilliancy. It lacked effervescence, sparkle ,and fire. No doubt, some injudicious elisions in the ordinary theatrical text, and the failure—whether by design or through inability, it matters little—to bring out the full comic power of the lines, had much to do with this dramatic tameness. It is certain that minor scenes, played by actors who, in speech and action, adhered more closely to the precise and artificial, but artistically appropriate methods of the older comedy, were infinitely more effective. The Mrs. Candour of Rose Coghlan, for instance, was admirable. So were the Crabtree of Mr. Bruning, the Backbite of Mr. Gottschalk, and the Sir Oliver—although this was lacking in unction—of E. M. Holland. The Sir Peter of Mr. Louis Calvert, while humorous and sympathetic, needed ginger. Mr. Lang's Charles, debonair and easy, had not the right devil-may-care glitter; the Joseph of Mr. Anson, would have been wholly excellent, with an added touch of suppleness and suavity. As a whole the performance was creditable and interesting; but a trifle pedantic. An infusion of the ancient spirit would improve it amazingly.

"The City," the last play written by Clyde Fitch, which was presented for the first time here in the Lyric Theatre on Tuesday evening, is, in its weaknesses and excellences, perfectly characteristic of the author. By virtue of the high pitch of melodramatic intensity to which it attains, at the end of the second act, after a series of ingenious and exciting complications, it is likely to prove one of his most successful achievements. The climactic scene, aided by some extraordinarily vivid emotional acting by Mr. Tully Marshall, provoked such an outburst of enthusiastic applause as is seldom heard in a theatre. But the play, in spite of its exceeding cleverness, its deft construction, its realistic characterizations, and its exciting incidents, is too full of artifice to be placed in the first rank. The action is not dominated throughout by sincere purpose, and has no specially significant bearing upon the proposed theme, the comparative advantages and opportunities of city and country life. The plot is extravagant, unpleasant, and violent, rather than strong; and the tragic outcome—which is purely theatrical, not inevitable—is due solely, so far as it is logical at all, to personal, not to local, influences. Actually the promise of a fine and potential comedy, with which the play opens, is ruthlessly sacrificed to lurid melodramatic effect. In this final work, Mr. Fitch shows that, as an inventor of a plausible, thrilling, novel, and abnormal central situation, he was more than a match for any of his younger competitors in this line, while he could easily excel all of them in the art of theatrical craftsmanship and the writing of life-like dialogue. The play will probably be a commercial triumph, but the judicious will grieve that the ability so strikingly displayed in it was not inspired by a higher aim and governed by a more artistic discretion.

It is stated that H. G. Wells has almost completed a play, which will be produced in due time by a prominent London actor-manager, who is himself to enact the hero. The scene is understood to be laid in a region entirely unknown hitherto, except to the author. Other plays have been staged in like territory before now.

Yet another historical drama, and, if not an epochal addition to its flimsy class, at least a very ingenious piece of stagecraft, is Emile Moreau's "Procès de Jeanne d'Arc," recently presented in Paris. It is a reassuring circumstance that contemporary playwrights, including M. Moreau, have learned the lesson that in these historical transcripts it is necessary to choose, and that, in some cases, the half is better than the whole. So it is in dealing with the career of the Maid, and M. Moreau has wisely treated only the final tragic episode. He has not hesitated, either, to romanticise his documents, and whether or not the phrase is allowable, the thing most assuredly is. Great praise belongs to the interpreter of Jeanne, Sarah Bernhardt, who seems indeed to have the secret of the great elixir. The purity no less than the intrepid courage of the heroine was finely expressed, and interest in this, the latest play by the author of "Madame Sans-Gêne," was unflagging so long as she occupied the stage.

Music.

Johann Sebastian Bach. By C. Hubert H. Parry. New York: G. P. Putnam's Sons. $3.50 net.

The adage that time brings its revenge has perhaps never been so forcibly illustrated as in the case of John Sebastian Bach. At his death, no one

appears to have had the faintest glimmering of his greatness as a composer, and his widow died as an almswoman. Half a century of almost complete oblivion followed, and it took the combined enthusiasm of Mendelssohn, Schumann, and many other musicians following their lead, gradually to convince the world that he was the deepest of all musical thinkers. To-day, he is universally accepted as such; by the revenge of time he even gets credit not only for his own stupeudous achievements, but for what others did before him in so far as their methods are reflected in his works. With the exception of Handel and Palestrina, his predecessors and contemporaries have faded away, and he now stands as the great exponent of musical thought and practice in the first half of the eighteenth century and what preceded it.

Yet, although Bach has thus been put on the pedestal he deserved, the musical world still knows barely one-tenth of the treasures he left it. His life's output is, as his latest biographer remarks, "so enormous that even the rare enthusiasts who chance to combine sincere intentions with an exceptional allowance of leisure may well be driven to despair of ever mastering a subject so vast." It is therefore a matter for sincere congratulation that this latest biographer, Sir Hubert H. Parry, is better qualified than any other musical author to perform the task of guiding music lovers to what is best among the unrevealed treasures of Bach's genius. In all Europe there are probably only two or three other musical scholars as erudite as Sir Hubert and at the same time as well qualified to set forth their knowledge in lucid language. As a matter of course, he is under deep obligations to Philip Spitta, who spent a lifetime of hard work, devotion, and ingenuity in rescuing from oblivion all that could be gathered about Bach's activity. But Spitta wrote as a specialist for specialists; his voluminous work is not for reading, but for reference; he marshalled a vast array of superfluous knowledge and failed to give a clear idea of the personality of the composer or a total impression of his work.

From these defects the Englishman's work is free. It is, as the subtitle indicates, "The Story of the Development of a Great Character," or, as the preface puts it, "a consideration of the life of a great composer mainly from the point of view of artistic development and self-expression." As Sir Hubert truly adds, on another page, of all the composers whose personality gains in fascination and whose individuality becomes more and more eloquent with the passage of time, John Sebastian Bach stands foremost. The records of his life are as scant as those of Shakespeare's, yet how many interesting books have been written on that poet and his works! Sir Hubert's "Bach" should be put on the same shelf with them. To every student, serious amateur, and public performer it is of absorbing interest, not only because of what it tells of Bach and his works but for the light it sheds, on almost every page, on the evolution and history of music in general.

The most vivid and important impression the general reader will get from a perusal of this book is that Bach was the exact opposite of the "bigwig stuffed with learning" he was, until nearly a century after his death, supposed to be. While his name is chiefly associated in most minds with the word fugue, it is true of him that "no composer ever attained to anything approaching the spontaneity, freshness, and winsomeness of his dances"; his suites and sonatas being, in fact, made up chiefly of bourrées, gavottes, gigues, passepieds, and other dances. These dances were those in vogue in his day; but while no longer danced, they are musically in vogue as much as ever and still produced in large quantities, so that Bach is in this respect, as in many others, really modern. His modernity is further revealed by the facts that in an age of much artificial ornamentation, he made even that serve the purpose of personal characterization and expression (p. 92); that "in the use of modulations for the purposes of expression, he often forestalled the most surprising effects of the most adventurous modern composers" (p. 547); that in vivacity, variety, elasticity, and frankness of rhythmic force, he was superior to all composers of his time (p. 27); and that while he is wonderful enough in the more conventional and regular forms of tune (dances), he is "far more so in the deeply expressive *rhapsodical* melody, the outpouring of copious and genuine feeling" (p. 555). On this rhapsodic side of Bach's music, which associates him with the modern romantic school, our author dwells repeatedly. Bach was the very opposite of a pedant or a formalist. Even of the fugue form he took an extremely independent view, being often driven by his impulses to abandon the accepted principles of fugal structure. And when we read what Sir Hubert has to say (pp. 65-6, 72-4, 221) about Bach's transcriptions and arrangements, and his occupation with the works of other masters, we feel almost as if we were reading about Franz Liszt.

In face of the wealth of helpful information and stimulating suggestion in Parry's volume, one feels somewhat as one does in face of Bach's own works —quite unable to present an adequate conception of its value. To make only one more comment, Dr. Parry is by no means blind to Bach's faults and shortcomings, most of which, to be sure, were those of his age. He refers to them frankly (*e. g.*, pp. 23, 68, 77, 108, 121-3, 125, 170, 205, 545, 564); and these pages are among the most illuminating in the whole volume. Particularly interesting is his exposition (p. 125) of the defects of Bach's orchestration, in one of which, to be sure, Bach shakes hands with Richard Strauss.

One of the most famous predecessors of Gluck, whose "Orfeo" is to be revived tonight at the Metropolitan, was Monteverdi. It is commonly supposed that Meyerbeer and Wagner were the culprits who first wrote operas of excessive length; but these, like most other things musical, originated in Italy. Monteverdi, a seventeenth-century reformer, who had many good things in common with Wagner, also shared his reckless garrulity. His best opera, "L'Incoronazione di Poppea," lasted five hours, which is longer than "Parsifal." This opera is of great historic interest from many points of view. Until a few years ago it existed only in one manuscript copy, in Venice, and this copy was almost illegible and full of copyists' errors. Hugo Goldschmidt transcribed it into the modern notation, and Breitkopf & Härtel published it as volume II of "Studien zur Geschichte der italienischen Oper." Some of the vocal passages would be found effective and dramatic even in a modern opera house; but what is of particular interest is that Monteverdi's opera contains in several places a primitive sort of leading motives.

The death of Ebenezer Prout, professor of music in the University of Dublin since 1894, is announced. He was born March 1, 1835, and was a graduate of London University. An industrious composer, he wrote four symphonies, and his orchestral works include also two overtures, a suite in D, and a suite de ballet. As a theorist he was the author of "Harmony: Its Theory and Practice" (1889), "Counterpoint, Strict and Free" (1890), "Double Counterpoint and Canon" (1891), a succession of books upon fugue, and a volume entitled "The Orchestra." From 1876 to 1882 he was professor of harmony and composition at the National Training School, and later he held like positions at the Royal College of Music and at the Guildhall School. Among his pupils at the Royal College was Eugène d'Albert. Prout succeeded Sir Arthur Sullivan as a member of the Royal Academy of Music. He was first editor of the *Monthly Musical Record* (1871-1874), and a frequent contributor after the editorial connection was severed. Later he was musical critic of the *Academy;* and, from 1879 to 1889, the critic of the *Athenæum*. His reputation as a lecturer was considerable, and, besides contributing to the *Musical Times*, he wrote over fifty articles for Grove's "Dictionary of Music and Musicians."

Art.

Visitors to the American exhibition held at the Metropolitan Museum in honor of the Hudson-Fulton commemoration may not have noticed that, as regards furniture, it was made up largely from a single collection, that of H. E. Bolles, Esq., of Boston. To him the Museum naturally turned, for probably no other collector has culti-

vated this branch with equal patience, taste, and science. Mr. Bolles has the instincts of an archæologist and sought out not merely fine examples, but variations of regular types, and series of objects representing the development of design. It is good news, then, that through the generosity of Mrs. Russell Sage, not merely the pieces still on exhibition, but the entire collection, comprising nearly seven hundred items, become the property of the Metropolitan Museum. Thus is added what is virtually a complete department of American domestic art, from earliest Colonial times to the first quarter of the nineteenth century.

At Durand-Ruel's Gallery in New York city six paintings by Edouard Manet are now on exhibition. The painfully realistic Ecce Homo has often been seen before; to it are added the Faure as Hamlet, The Reader, the Woman before the Looking Glass, The Beggar, and a sketch of Boulogne Sands.

The collection of the late Theron R. Butler of New York city, which is rich in paintings of the Barbizon school, is to be sold next month. It will be on view at the American Art Galleries, Madison Square South, from January 1 to January 7. On the evening of the latter date the pictures will be sold at Mendelssohn Hall. A catalogue de luxe, richly illustrated with photogravures, limited to one hundred and twenty-five copies, has been issued in connection with this sale at $15 the copy.

We have received the first number of *Schlesien*, an illustrated fortnightly review, published by Fritz and Karl Giwinna at Breslau. It is devoted mainly to arts and crafts in Silesia, and the illustration is of a superior order. A note on the Breslau exhibition of religious art is one of the more attractive articles. The editor is the well-known authority on education, Bruno Clemenz.

Until Hugh P. Lauc brought about the foundation of a gallery of modern art in Dublin, Ireland was the only country in Europe that had no such gallery. Dublin did possess a fine collection of the old masters, but there was not even a private collection of modern pictures that was accessible. Five or six years ago an exhibition of the works of Irish artists was held in the Guildhall in London; widespread interest was kindled, and the idea of a gallery of modern art in Dublin took definite form. Mr. Lane, who is noted for his skill in judging "young" pictures, presented his collection, including Rodin's Age of Bronze, and the Dublin Municipal Council supplied the gallery and the funds for maintaining it. Liberal gifts were made by various individuals, and the results of three years are shown by a catalogue, now before us. Among the Barbizon school pictures are nine Corots, including the Palace of the Popes at Avignon and a Woman Meditating; there are two paintings by Puvis de Chavannes, one being a large decorative work, The Beheading of John the Baptist; Fantin-Latour, Diaz, Monticelli, Jacob Maris, and Harpignies are well represented, and there are, too, two Manets (the Tuileries Concert and the Eva Gonzales), Renoir's Parapluies, a Degas, and some Monets.

In 1863 Thomas Denison Lewis left 10,000 pounds sterling to the National Gallery. It was the earliest bequest in money. Maurice W. Brockwell has traced the consequences of this benefaction in the scholarly book "The National Gallery: Lewis Bequest" (London: George Allen & Sons). If anything were needed to prove the value and permanence of this sort of gift, it would be the record achieved in forty-five years with the slender annual income of a thousand dollars or so. Ambrogio Lorenzetti, Signorelli, Antonello da Messina, Tiepolo are the names that most adorn the Italian pages. Portraits by Joos van Cleve the Elder, Mabuse, and Frans Hals—the first the Gallery acquired—are the most attractive Netherlandish acquisitions from this fund. The French list includes a very rare painting by the illustrator St. Aubin, and a portrait by David. More notable still are such English accessions as Hogarth's portraits of his servants, Gainsborough's spacious Wood Scene, Village of Cornard; Gilbert Stuart's portrait of himself, Old Crome's Windmill on Mousehold Heath, Ford Madox Brown's Chaucer at the Court of Edward III, and finally an entire group of pictures and sketches by that sculptor-painter of genius Alfred Stevens. All the minute research that goes to make a catalogue of this kind useful, the author has accomplished ungrudgingly. Here we have for the first time in English the result of the recent discoveries about Antonello da Messina. More strangely, we read here for the first time the correct date of Alfred Stevens's birth, December 30, 1817, and dispose forever of the superfluous middle name, George, that posterity had imposed on him. The volume has all the points of a well-made museum handbook, is fully illustrated, and offers for good measure a statistical comparison of European and American galleries as regards Italian old masters. These confessedly incomplete figures bring into relief the richness of the National Gallery and of the private collections of London, whereas America can be said only to have made a fair beginning.

From Madrid is reported the death of Augustin Querol, the sculptor, on December 14. He recently submitted a model for the Columbus monument which is to be erected at Washington.

Julius Bien, painter and lithographer, died December 21 in New York city, in his eighty-fourth year. He was born in Hesse-Cassel, Germany, and came to the United States in 1849. In 1852 he illustrated "American Locomotives and Railroads," and, later, the Coast Survey Reports, Pacific Railway Surveys, Heyden's and Powell's Expeditions, Atlas of the Records of Rebellion, Statistical Atlas of United States Censuses, and many other government and State reports. From 1889 he was president of the National Lithographers' Association.

Finance.

COST OF LIVING AND THE MONEY MARKET.

Rise in the cost of living is not a new subject of controversy. The London *Economist's* well-known "index number," averaging commodity prices, had advanced 13½ per cent. between 1897 and 1904. But between 1904 and the middle of 1907, a period less than half as long, there was a further rise of nearly 22 per cent. Then came the panic of 1907, and there were some economic critics, though perhaps not many, who ascribed the financial and industrial breakdown to the intolerable burden of the cost of living.

It had been the rule of past financial crises that in the industrial readjustment following them prices of necessaries not only went down, but for years remained at a lower level. Taking the *Economist* average at the opening of the several years, the index number fell from 2,121 in 1893 to 1,890 in 1898, and did not reach the higher level again until 1899. It was 2,947 in 1873; it went progressively down until it reached 2,225 at the opening of 1879, and it never got back to the high level of the panic year.

The panic of 1907 brought a result in some respects different. There was, indeed, a sharp and rapid fall. The "index" stood at 2,601 in May, 1907, and it was down to 2,168 in August, 1908. But there the downward movement stopped, only ten months after the actual panic date, and the average began to move up again. At this month's opening, it had reached 2,333—a figure which, though still well below the top notch of 1907, was nevertheless higher than any monthly average attained, until the end of 1905, in the prolonged rise in cost of living which began in 1897.

During the past few weeks, even financial interests have begun to look at the matter with a somewhat different feeling from that displayed in 1906 and 1907. One reason for the different feeling is, that the present movement seems so abnormal that experience is no sure index to results. Another is the fact that along with this rapidly rising cost of living has come another phenomenon, similarly coincident with it in 1906, and directly significant then to Wall Street—evidence of a strain on capital. A third reason lies in the unpleasant remembrances of financiers, of how cost of raw material ate up profits of industry three years ago.

Finally, as a very distinct reminder, came the recent widespread demand by railway and industrial laborers for higher wages to offset the cost of living. Forced to consider the problem as one with a bearing even on financial markets, Wall Street is asking now in some bewilderment, What is the cause of this abnormally quick return to oppressive cost of living? Who or what is responsible for it? What will follow it?

Various answers have been made—the gold output, the Trusts, the tariff, the speculators, obstinacy of producers, habitual extravagance of consumers, exhaustion or depletion of the country's natural resources. Possibly there is some truth in all of them. Whatever else an increasing gold output may do, it certainly increases bank reserves.

Larger bank reserves mean increased facilities for credit, and credit is invariably an important influence in advancing or holding prices of commodities. Yet there is this much to be said, that the world's gold output is certainly not increasing at the pace of such years as 1898 and 1899, or even 1894. It is doubted by many experts if this year's total production will be any larger than that of 1908, and meantime the jacking-up of prices continues as if the increase were enormous.

The Trusts have done their share—notably this year, such smaller combinations as the "Milk Trust." Yet it is rather curious that the greediest of all the great Trusts of 1906 in the matter of extorting abnormal prices—the copper combination—is this year having troubles of its own in holding even average prices, while the Steel Trust has only lately yielded to demand for reductions. The tariff, notwithstanding President Taft's exoneration of it as an influence, does have a bearing in preventing relief when domestic prices are excessive; but the very figures for cost of living, quoted in this article, are not American, but English.

Operations of speculators have something to do with cost of living, and their success is largely a consequence of easy credit caused by increasing gold supplies in bank reserves. This is not true alone of speculators on the various commodity exchanges—easy credit and the assistance of the banks have gone far towards turning producers, for the time, into speculators in their own commodities, if not into a sort of Trusts. Cotton and grain markets, not to mention real estate, are aware how much the present prices are attributable to the original owner who holds his property off the market until his price is bid. Habitual extravagance may itself result indirectly from successful speculation, or directly from easy credit—the second explanation being reasonable in the case of that very large section of the community which is already living once more beyond its means. As for exhaustion of natural resources, the price of such things as lumber and paper is at least a case in point.

Here is a fair variety of possible and plausible causes. Some of them may cease to operate, or may relax their force of operation, at a certain level. If they do not, Wall Street will probably ask, What next? Recent experience indicates that, if the rise in cost of living does continue at the present pace, we must look for recurrent encroaching on the limit of available capital supplies—since a smaller margin between average income and average expenditure means smaller accumulation—and for recurrent episodes of compulsory readjustment of demand. Such readjustment will be light or severe in character, according to the magnitude of the strain previously imposed on credit.

6% Irrigation Bonds

Secured by a Thousand Farms

The security back of Irrigation bonds is first liens on farm lands—sometimes a thousand farms.

These liens are given by individual land owners in payment for water rights. They are paid in annual installments. The land which secures them is generally worth four times the lien.

The trustee may hold a thousand such liens—given by a thousand farmers on a thousand separate farms—as security for the bonds as a whole.

The farms under lien are among the most fertile farms in America. And the perpetual water right, which the lien secures, multiplies the land's value. The first crop is usually more than sufficient to pay the whole lien.

The land is not subject to crop failures, because the farmer controls his water supply. The earnings are large and sure.

A bond issue based on a thousand such liens is, in our estimation, the safest sort of security.

Additional Security

Irrigation bonds are additionally secured by a first mortgage on all the property owned by the Irrigation Company. The investment in this property is often twice the bond issue.

Thus, in addition to the many farm liens, we have this corporation and all of its property pledged to the fulfillment of all obligations.

Some Irrigation bonds are issued, like School bonds, by organized districts. Such bonds form a tax lien on all the taxable property of the community.

Some Irrigation bonds are issued under the "Carey Act," where the State supervises the project.

73 Issues Sold

During the past 15 years we have sold 73 separate issues of Drainage and Irrigation bonds, all secured by farm liens. Every obligation under every bond has been promptly met.

These bonds have become, with most of our customers, the most popular bonds that we handle. Now, we have first pick of these projects, because of our dominant place in this field.

Our own engineers and attorneys investigate every feature. An officer of our Company constantly resides in the irrigated sections, watching the projects we finance. Thus, our customers secure only the very cream of Irrigation bonds.

Ideal Investments

Such Irrigation bonds as we handle are regarded as ideal investments. The security approaches the absolute.

They are serial bonds, running from two to twelve years, so one may obtain any desired maturity. The denominations are $100, $500 and $1,000, so one may invest either little or much.

The demand for irrigated land is so great, and the projects so profitable, that the bonds pay six per cent. That is a higher rate than can now be obtained on any large class of equal securities.

We have written a book on Irrigation bonds, based on our vast experience. Every investor, small or large, should read it. The book is free. Cut out this coupon, as a reminder to write for it.

January Investments

For January investors we have on hand 100 varieties of bonds. They include Municipal, Public Utility, Water Power, Corporation and Irrigation Bonds. Please ask for our list. Cut out this reminder so you won't forget.

Johnson: Selections

Edited by C. G. Osgood, Preceptor in Princeton University. (*English Readings*). lx+479 pp. 16mo. 90 cents.

The aim of the editor has been to give proper recognition to Johnson's literary powers, to correct mistaken ideas as to his character and personality, and to present Johnson to the student in full stature and right proportion. Among other selections the book contains the Preface to the Dictionary, the lives of Savage and Addison, and a liberal number of the essays, letters, and prayers.

Poe: Selections from His Critical Writings

Edited by F. C. Prescott, Assistant Professor in Cornell University. (*English Readings.*) li+348 pp. 16mo. 75 cents.

A collection which includes the essays in which Poe develops his theory of the poem and of the prose tale. The introduction contains a summary of these theories and an estimate of Poe's qualifications and position as a critic.

HENRY HOLT AND COMPANY, NEW YORK CHICAGO

Second Edition Before Publication.
Indisputably the Book of the Year

Retrospections of an Active Life

By JOHN BIGELOW

Three vols. Imperial 8vo. 48 illustrations $12 net; carriage extra

A memoir of the classic type: copious in letters, documents, opinions, anecdotes. A record of great events, great scenes, famous men and women. Time—1817-1867. Historic characters—Lincoln, Gladstone, Queen Victoria, Seward, Thackeray, Lord Lytton, Dumas, Guizot, Maximillan, Stanton, Lord Palmerston—appear in the ample pages.

"He tells a story that is of exceptional interest, even in these days of a surfeit of personal reminiscence."—*Boston Transcript.*

"Mr. Bigelow's work is remarkable throughout for its clarity, orderliness, and definiteness of treatment."—*Review of Reviews.*

THE BAKER & TAYLOR CO.
33-37 East 17th Street, New York

The Conclusion of a Great Work.

A Literary History of The English People

From the Earliest Times to the Civil War. By J. J. JUSSERAND. Three vols. 8vo., with Frontispieces. Each $3.50 net.

Vol. III. (completing the Work) From the Renaissance to the Civil War: Part II. Now Ready. Previously Issued: Vol. I. From the Origins to the Renaissance. Vol II. From the Renaissance to the Civil War. Part I.

"Mr. Jusserand's qualifications for the task which he has undertaken are of a high order. There are few foreigners, and certainly very few Frenchmen, who have so intimate a knowledge of English life. He has already gained great distinction as an original investigator in more than one period of English literary history, and although his point of view in the present work is unmistakably that of a Frenchman, he shows a degree of sympathetic insight which is seldom met with in foreign critics of our literature."—*London Athenaeum.*

G. P. PUTNAM'S SONS, NEW YORK & LONDON

AN INTRODUCTION TO THE GEOLOGY OF CAPE COLONY

By A. W. ROGERS, D.Sc., F.G.S., and A. L. DU TOIT, B.A., F.G.S., of the Geological Survey of Cape Colony. With a Chapter on the Fossil Reptiles of the Karroo Formation by Prof. R. BROOM. Monarchical Socialism in Germany

It is a surprising, not to say sensational, revelation of how great a part the German state is taking in industrial affairs.

The Eruption of Pelée

BY

ANGELO HEILPRIN

This work embraces the main scientific facts contained in the author's "Mont Pelée and the Tragedy of Martinique" and the "Tower of Pelée," together with the results obtained from his last visit to the volcano in 1906, when it was found practicable to descend into the crater, whence the giant obelisk of rock had been extruded to a height of 1,000 feet. A quarto volume, containing a remarkable atlas of plates from photographs.

Price $4.00; postage 54 cents extra.

The Nation

"The Foremost Critical Journal of America."

CONTAINS EACH WEEK:

Paragraphs of News Interest, Editorials that are widely quoted, Art notes by experts, Dramatic criticisms that are authoritative, opinions on Music that are pertinent, and a column or two on Finance by a keen analyst.

Its Book Reviews—called "the best in America"—are not related to the advertising pages.

The Review of Reviews

is impartial; it neither muck-rakes nor hides facts. Dr. Shaw's editorial, "Progress of the World," opens the magazine with thirty splendidly illustrated pages that give the reader a clear, finely interpreted account of the men and events of the month. Reviews of the best articles in the other magazines of the world are so comprehensively done that they have given the Review of Reviews fame all over the world. Each month the Review produces the most graphic, clever and striking cartoons that have appeared in American and foreign papers.

The Nation

The Nation.

NEW YORK, THURSDAY, DECEMBER 30, 1909.

The Week.

Mr. Pinchot's address of Monday contained undeniably words of warning. He evidently believes that the work of conservation is endangered. With much intensity of language he spoke of schemes to defeat the ends aimed at by the Forestry Bureau and to fasten the clutch of corporate hands, by secret and unlawful means, upon what should be kept for the general use and enjoyment. We take it for granted that Mr. Pinchot can produce the evidence for his charges, and that it will be laid in due time before the Congressional committee that is to be appointed to look into the whole matter. There need be no doubt that public feeling is now such that it will stand by any official who seeks to beat off from government lands all dishonest and greedy intriguers. It will be wise, however, for Mr. Pinchot and all who are heartily with him in his important work, to perceive that the whole difficulty does not lie in self-seeking and fraudulent opposition to the conservation policy. There is an antagonism which is honest. In many of the Western States the people feel that their legitimate development is hindered by too narrow restrictions upon the preëmpting and use of public lands.

This Western point of view was well set forth in the speech which Representative Mondell of Wyoming made in the House the other day. As printed in the *Congressional Record*, it had the caption: "Shall the People or the Bureaus Rule?" That suggests the line of argument. Mr. Mondell spoke with good knowledge of conditions in the public-land States, and affirmed with energy their determination to administer their own affairs without any "Federal landlordism." His speech dealt specifically with the water-power question. Over non-navigable rivers in the States, Congress has no control. The waters of all natural streams are State property. This was fully recognized by Secretary Ballinger in his proposal that the Government should not alienate, but only lease temporarily, lands which may be used for power-sites. As the right to use the water itself can be conferred only by the State, the Secretary urged that the States should be asked to "transfer to the United States" the "necessary water-rights" to go with the permits for the use of the abutting land. Against this, Representative Mondell protested with the utmost earnestness, and declared that such Federal control would not be tolerated, first, because it was without Constitutional warrant, and, secondly, because "the people of these States have clearly and definitely assumed and do now exercise full and complete control over the use and distribution of water, and can manage their domestic affairs better than they can be managed for them." This whole policy of conservation must be written in statutes which the wayfaring man can understand, which the trickster cannot violate without incurring swift and adequate penalties, and which the Administration can enforce as the deliberate will of the people.

Postmaster-General Hitchcock's annual report shows that he is alive to the necessity of increasing the postal revenues, but it offers no clear-cut plans for reform. The chief sources of loss are the rural delivery routes and the low rates on magazines, to which Mr. Taft referred in his message. Mr. Hitchcock's suggestion that distance zones be established for the magazines, with varying postal rates, will scarcely prove practical. And if it did we should see the magazines moving to the centres of their circulation. Interference with printed matter of as great educational value as these magazines will hardly be possible without arousing violent popular feeling. But an inquiry into the prices paid to the railways for carrying second-class matter might be profitable. A more hopeful field would seem to be the rural delivery routes, into which branch of the service, as Mr. Hitchcock admits, serious abuses have crept. The loss here is no less than $28,000,000 a year; but when Mr. Hitchcock touches this, he touches politics. The extension of the routes has been due largely to favoritism, so that often in thickly settled communities, in which the rural delivery would pay, there is none, and in the sparsely settled regions represented by some influential Congressman, rural delivery is general. Here, too, Mr. Hitchcock has no definite suggestions, though he is certain of making considerable savings by readjustment and modernization. In that direction seems for the moment to be the best hope of cutting down the deficit of $17,479,770.47.

Ohio Republicans are saying to themselves with a mixture of apprehension and complacency that their State bids fair to be the chief political battlefield next year. This is partly because we have an Ohio President again, and partly because, if Gov. Harmon is reëlected next November, he may easily become the Democratic candidate for the Presidency in 1912. It is felt that it would be a serious blow to Mr. Taft's prestige if his party were to lose his own State before his term was half over. And despite the condescending Republican talk about the need of a strong and respectable Opposition party, there is a natural dread of making it so strong and respectable under the leadership of Judson Harmon that it would stand a good chance of carrying the next Presidential election. Hence the present flutter in Ohio. Its Republican citizens are not a little elated to see their State again made "pivotal" in the old absorbing way, but cannot repress a fear lest their party's fortunes should turn the wrong way on the pivot.

The setback to the anti-liquor movement in recent local elections in Massachusetts and elsewhere has led, according to the Chicago *Inter Ocean*, to a renewal of hostilities between the Prohibition forces and the Anti-Saloon League. In a circular issued by the chairman of the Associated Prohibition Press, the argument from Massachusetts is driven hard. In that State, as a whole, an aggregate majority of 26,000 has been registered for no license within three years. Yet in the election of two weeks ago four cities with a population of 220,000 deserted the no-license column, while only one city with 32,000 population entered it. The argument proceeds:

> Were the same tremendous amount of energy, enthusiasm, money, and political

wisdom and experience which has been lavished in these local contests now to be focussed upon the adequate and sufficient goals of State and national prohibition, backed by an organized political uprising of the people who believe in it, the liquor traffic would see a nation-wide doom within twelve months. With the seesaw activities of the present hour, nothing permanent will ever be accomplished.

In other words, communities that have once declared against liquor and want to change are to be kept in the straight and narrow way by majorities elsewhere in the State. How far such a system carries an unwilling community towards real prohibition, Portland in Maine and Atlanta and Savannah, Georgia, are still with us to testify.

It would be unfair to hold President Taft responsible as yet for the plan of a new government for Alaska which is now being outlined in the newspapers, since he has not officially recommended it. Yet there are marks which indicate his interest in it. The government foreshadowed is based on the Philippine Commission, for there are to be nine councilmen or commissioners, of whom a minority, four, are to be elected; Mr. Taft's plan is, according to report, a "strongly centralized government administered by comparatively few men." We need not discuss now whether the only alternative left in dealing with Alaska is this abandonment of the democratic theory of government, and even the historic form for the administration of a Territory later to become a State; but we must point out the danger accompanying our departure from republican forms in the Philippines. When we first took our rash plunge into Imperialism, we heard much of benefit to our own political life to be derived from governing others for their unadulterated good. But here is about the first case we can record in which the Philippine experiment has affected home conditions, and it is in quite the wrong direction. People scoffed at the idea that ruling by generals or by commissions in Cuba, Porto Rico, in Panama, and the Philippines could react on our own political ideas, but now we see that it may. Congress will, we trust, be careful not to adopt any plan for autocratic government in Alaska without the most careful consideration of what this means and whither it leads.

According to cable dispatches from Hawaii, "Prince Cupid" has committed the unpardonable sin of attacking Gov. Frear of that Territory, charging that official with falsehood and with holding his office "solely in the interest of the sugar planters." This incident will probably end, the dispatch says, in the "elimination of natives as representatives in Washington," "Prince Cupid," or Mr. Kalanianaole, as he is officially known, being now Delegate to Congress. The Prince did not even stop with this denunciation, but treasonably declared that the administration of public lands had not been in the interests of the people, but of the sugar planters. "We must do something," he declared, "to get the land back among the people." This treason to the sugar planters merits, we submit, a much worse penalty than mere deprivation of office. Bread and water for forty days in solitary confinement strikes us as about the proper punishment for questioning the divine right of capital in Hawaii to continue to control the islands and to exploit the natives precisely as it sees fit.

If Cook is insane, that is a matter for regret and sympathy on the part of his personal friends, and a matter of interest from the standpoint of the alienist and the psychologist; as a public figure, he ceased to have any interest whatever from the moment that his claim was proved to be fraudulent. It is absurd to treat his case as though he had won great honor in other ways, and afterwards committed acts which were ascribed to moral defects, but which might be explained on the ground of mental disease. Cook had no title to the world's attention except the performance that is now exposed as a preposterous hoax; and whether the fraud was committed by a man who was altogether sane or by a man who was more or less insane, is surely a matter possessing very limited interest. When it is further borne in mind that Cook's past, as shown up in the course of the inquiry, is quite in keeping with the fraudulent and money-grabbing propensities exhibited in this matter of the Pole, a last touch is put to the absurdity of giving him any further attention as a serious subject of public concern.

If a Roman draughtsman had accompanied Cæsar's legions to Gaul, and there set down with fidelity the semi-barbaric warriors, the weapons they bore, the horses they rode, the whole circumstance of aggressive civilization beyond the Alps, we should treasure his work, quite irrespective of any precious quality as art. The faithful picture of the winning of the West by the late Frederic Remington is marked by a singular vivacity and comprehensiveness. His curiosity was unbounded, he lived the life he depicted, and enthusiasm supplied a technique suitable for his peculiar sort of stalwart expression. His business was with action. To convey the vivid sense of taut muscle in man or beast he willingly sacrificed what he rightly regarded as the smaller qualities of harmony and surface. Emphatically the illustrator, the sheer energy and zest of his workmanship make it in every way more important than much that passes as exquisite. He was one of the very few able artists of our time who managed never to be clever, preferring instead a quite magnificent audacity in truth-telling. It is not necessary now to pass upon his copious production as art. Presumably, it will mean a little less to a generation for whom Col. Cody and Col. Roosevelt will be half-forgotten legends. But we cannot imagine a time when a lover either of art or of humankind, happening on a portfolio of Frederic Remington's designs, will not find them tonic. Without him posterity would be at a loss to know what the West looked like, for no photographs have the drastic facility that dignified alike his casual scribble in a notebook and his finished group in bronze.

That a little learning is a dangerous thing is a maxim which finds illustration in many ways. One of these is the readiness with which the mass of easy-going up-to-date people accept as a finality what they are given to understand is the latest word of "science"—whether in history, philology, ethnology, physics, biology, or what not—as to the worthlessness or error of the results obtained by the great men of former days. In his address at the opening of the Palmer Physical Laboratory at Princeton, printed in the current number of *Science*, it is pleasing to find Dr. Elihu Thomas laying down the law in one such case. Speaking of Franklin and the lightning rod, he says: "In these later years it is not unusual to meet

with statements of discredit or denial of the efficacy of this simple device. There seems to be a tendency among the uninformed to regard it as an old-fashioned and useless if not a dangerous contrivance." And he proceeds to assert with emphasis that, while ignorant or dishonest lightning-rod men have made worthless installations, "the Franklin rod when properly installed undoubtedly secures practical immunity from lightning damage"; and, furthermore, that the best vindication of Franklin is found in the "reliance placed by the trained electrical engineer upon the provision of an easy path for the electricity of lightning to reach the ground." There are a hundred directions in which there is altogether too much of a "tendency among the uninformed"—and among the well-informed, too—to accept with cheerful alacrity the verdict that this or that achievement of the past must be thrown into the scrap-heap.

It is good news to hear from Washington that Zelaya is not to escape us, after all. We had begun to fear that this miscreant, being on Mexican soil, might avoid trial for murder by our Government. Hence we are really relieved to learn from Washington dispatches that Mr. Knox is not worried; that he can bring Zelaya to the bar at any moment. The State Department knows just what it can do, there being so many precedents for putting on trial in his individual capacity the head of one sovereign state for behavior unsatisfactory to another sovereign state. What is the last precedent? Why, Abraham Lincoln returned to Spain a slave-ship captain, a subject of Spain, who fled to this country. What analogy could be closer? All Mr. Knox will have to do will be to write to President Diaz: "Dear Diaz: Please deliver Zelaya to the United States troops at El Paso and let us reciprocate at any time. We expect to try Zelaya at Pittsburgh for his cruelties committed in Nicaragua. With best New Year's wishes, Knox." Seemingly, in international law the Pittsburgh lawyer is hereafter to be as famous for ingenuity as the Philadelphia lawyer has long been.

Not the least unfortunate aspect of the Nicaragua mixup is the growing strain upon our relations with Mexico. It is disappointing that, only a few months after the elaborate show of friendship between Presidents Taft and Diaz on the banks of the Rio Grande, the two countries should have fallen into a state of mutual irritation. Mexico is angry and anxious, and shows her resentment by constituting herself Zelaya's protector in the hour of his adversity. Our own State Department thereupon loses its temper and, looking about for something to quarrel over, hits upon the case of an American citizen who has spent five months in a Mexican jail under a criminal indictment, without being brought to trial. How about it, asks our State Department, in a tone of moral indignation peculiarly appropriate in a people who, like ourselves, do not know what is meant by the law's delay, or the occasional miscarriage of justice. Certainly the *Civis Americanus sum* has never been sounded so sonorously as during these last few weeks of excitement in the Caribbean.

Belgium under King Albert I enters upon a phase of her national career that may be full of high interest for the world at large. To the peoples and politicians of Europe there is new food for speculation in the presence of a sovereign of known German sympathies on the throne of one of the two little maritime nations that German Imperialistic ambition is supposed to have marked ultimately for its own. Outside of Europe, interest will lie in the rôle that Belgium under her new King will now play in the Congo. Up to the present the Congo has been a stain on the national honor of Belgium, without the compensation even of material profit. It remains to be seen whether the new régime will succeed actually in accomplishing what has been so loudly claimed in behalf of the late King—the planting of the roots of civilization in the heart of the Dark Continent. It is a splendid opportunity offered to a small nation. The Congo colony, because of the low stage of civilization its inhabitants have reached, because of the great administrative difficulties it offers, is more peculiarly a white man's burden than almost any other possession of the European nations. High testimonials have often been paid to the efficiency and devotion of the Belgian civil service in the Congo. They were excellent men in the clutch of an evil system. These men should now have an opportunity to show what they can do when they work, not for rubber, but for civilization.

It is impossible for Americans to point to assassination of high officers of government as a product of despotic conditions exclusively, in view of our own record of Presidential assassinations; but when three such events are given in the telegraphic dispatches of a single day, and all of them are based on essentially similar conditions, the concurrence is too striking to be passed over. The blowing to pieces of the chief of the secret police in St. Petersburg is but the latest incident in a long story of desperate revolt against intolerable despotism; the killing of the Prime Minister of Korea, as of a British chief magistrate in India, is a manifestation of a state of things that is more recent. But in all three cases, the fundamental fact is the same—the unrest of the people of our time, whether in Orient or Occident, under conditions which are a denial of the right of self-government. It is well to take note of such indications of the state of mind of subject peoples and remember them when smooth things are prophesied of the future of our own relations with the people of the Philippines.

Mr. Wu Ting Fang's promise that he will be with us again fifty years from now gives the people of the District of Columbia and the entire American press something to look forward to. Mr. Wu's entrances and exits as Chinese Minister at Washington constitute one of the most legitimate and real subjects of permanent newspaper interest. He has been in the flesh the imaginary traveller from China or the Indies whom eighteenth-century writers were fond of making the vehicle of satire against European civilization. The tone in which the Chinese diplomat's acts and sayings have been chronicled shows plainly that we credit the bland and open-eyed observer from the East with a sense of humor equal to our own. If Minister Wu carries out his intention of living two hundred years and comes back as Minister at Washington in 1959, may it be as the representative of a constitutional, well-governed, and prosperous China to a free, self-governing, dis-Aldriched and un-Cannonized United States.

ECONOMIC SCIENCE IN AMERICA.

The American Historical Association and the American Economic Association are celebrating in New York this week the twenty-fifth anniversary of their formation. That the Historical Association should date back only a quarter of a century seems surprising, in view of the extensive pursuit of historical study from an early period of our national life; but in the case of the Economic Association, the foundation of the society was almost coeval with the beginnings of important and widespread activity in our country in the field whose cultivation it was designed to promote. Indeed, when the formation of the American Economic Association was proposed, twenty-five years ago, few persons realized that there existed in America a body of earnest and able students of economics adequate to maintain such an association. And in fact such a body of economic scholars and investigators in our country had at that time existed only a very few years.

Great as have been the material changes in America in the past three decades—the applications of invention, the growth of wealth, the concentration of industrial and financial power—there has been quite as striking a change in the development of specialized learning. In every department of research there has been, since the foundation of the Johns Hopkins University in 1876, a radical change of the status of American science and scholarship as related to the intellectual activities of the Old World. Before that time, with the exception of the work here and there of some isolated man of extraordinary powers, America was content, in nearly every field, to be a receptive follower, leaving to European investigators the task of maintaining the advancement of science and the progress of scholarship; now, in almost every branch, she contributes, at least in quantity and in many instances in quality also, her full share to the great stream of scientific research and publication. It might have been thought, *a priori*, that economics would naturally be an exception to this rule; that, in view of the prominence of economic factors in the making of our history, the study of such phenomena would have attracted adequate attention at an earlier date than other branches of inquiry; but this was by no means the case. On the contrary, there is perhaps no department of research which—aside from the work of a few notable individuals—had been more completely neglected among us. And among the very few exceptions that did exist, two were of the kind that eminently prove the rule; for the work of both Henry Carey and Henry George, whatever may be one's judgment of its merit or its value, was precisely of the kind that does not spring from a general or systematic cultivation of scientific study.

In the common advance of specialized study that has taken place in America, no department of inquiry has shared more conspicuously than economics; indeed, it may be doubted whether there is any other subject in which so marked a development has been shown. And this is not surprising; for in the case of economics there has been present an incitement special to this province. Thirty years ago, with the exception of the currency and the tariff, there were no economic problems felt by the nation at large to be pressing. Labor questions there were, to be sure; but they had not assumed anything like the definiteness of the questions of to-day. Our national resources still seemed inexhaustible. We were only beginning to realize the scope and significance of corporation problems; the giant combinations of capital that are in the forefront to-day were in the future. Our people were still predominantly agricultural; and Socialism was only dimly thought of as a question that might some day come home to us. With the growing complexity of our conditions and the growing urgency of economic questions of every kind, there has been a demand for a vast amount of close study, both of general problems and of specific conditions; and the publications of the American Economic Association bear witness to the fact that this demand has been worthily responded to by the professors in our universities and by other students.

It would be a mistake, however, to attribute solely to these practical demands the growth of economic study in our country. In the domain of theory there has been a notable activity, and several of our writers have won high international recognition in this field. Indeed, it is interesting to recall that, in its early years the American Economic Association interested many chiefly for its attitude toward the controversy, then at its height, between the "orthodox" English political economy and the views of the German "historical school." It was soon made plain that the Association was not to be identified with any dogma or faction; and the controversy itself now seems a vague and distant memory. As to the work of American economists in general, it may fairly be said that some of them have pushed the refinements of theoretical analysis as far as they have been carried anywhere, while others have gone into the most painstaking and laborious examination of concrete facts. If some of this labor, in both directions, has passed beyond the limits of what is profitable, that is but the price which must always be paid, in this world, for the energetic and whole-hearted promotion of any large object.

There is one important aspect of the growth of scientific study of economics in our country which is too gratifying to be passed without mention. This is the utilization of the services of trained economists in the carrying on of government work, and the influence that has been exercised by them on the course of legislation and administration. With professors of economics drafted into the public service for such tasks as the straightening out of the finances of Porto Rico and San Domingo, the investigation of tariff schedules under the provision of the new tariff act, the organization of the work of the National Monetary Commission, and other things too numerous to mention, the epithet "academic" will hardly any longer be applied to our scientific economists as a term of reproach. But these governmental appointments by no means furnish a measure of the practical influence that our economists have been exercising. The remarkable development of governmental efficiency in the State of Wisconsin, in its dealings with corporations and in other matters, is a signal example of the kind of thing we have in mind. And, aside entirely from governmental activities, there is the influence of our economists upon the formation of public opinion on the great questions of the day, an influence which is sure to be manifested in increasing degree as the years go by. It is a national gain that, at a time when we shall need all the resources of trained intelligence and impartial investigation

for the wise treatment of economic problems, there has grown up among us a body of men properly equipped for such a task.

HISTORY AS AN ART.

The works of the Neapolitan philosopher and critic, Benedetto Croce, are well known to special students. He has the gift of clear and trenchant utterance, and the translation just issued of his first extensive work, "Æsthetic," will interest any one who can read real books of any sort. Many who are indifferent to the main argument will be stimulated by incidental comment that touches vigorously pretty much every field of intellectual activity. For example, Signor Croce discusses in passing the much-disputed point whether history is a science or an art.

Here he goes immediately to fundamentals. What counts for him in the case is not any display of method, but the nature of the affirmations made by the historian. These, when they transcend mere annalism, are not affirmations of the intellect, based on generalized experience, but intuitions based on the memory of other persons. Moreover, history never permits real generalizations. It deals always with the particular. We talk of heroes but mean Antony or Napoleon; we discourse concerning nations but mean always Rome or England. The generalizations of history are either illusions or pretence. At times they are valuable. In such case, says our guide, we have philosophy masking as history. More often we have merely the complicated and extended intuitions of the artist-historian borrowing the airs and phrases of the sciences.

That history, if a science, is on a different basis from any that admits direct observation and experiment has frequently been remarked. Signor Croce lays smaller stress upon the inherently uncertain nature of the data of history than upon the manner in which such materials inevitably are transmuted into the written page. He might have alluded tellingly to the fact that the historians who most affect the manner of science have generally declined to attempt this transmutation, occupying themselves merely with the arrangement and publication of archives. And the timidity of such scholars throws much light on the whole matter. What do they fear except to fall into what they scornfully style "mere literature," that is, history—and art? Whenever real history, as distinguished from source-books, is written, we are in the field of the intuitions. Out of a variety of possibilities we get the one that has vividly appealed to the taste of a given historian. This is true of what we ordinarily call the facts of history; and evidently its interpretations are even more deeply colored by simple personal preferences.

This view has been objected to as belittling one of the most fascinating of pursuits. Signor Croce, on the contrary, claims to be the very good friend of history. As an art it deserves even greater respect than it may arrogate as a pseudo-science, and if its affirmations are often divinations, they are thus all the nearer to the kind of intuitions by which we perforce direct our own lives. Here he takes strong ground against the skeptics for whom history is "the fable agreed upon." The historian is an artist, but he deals in an authentic and even authoritative art of life:

> Historical certainty is composed of memory and of authority, not of analyses and of demonstration. To speak of historical induction or demonstration, is to make a metaphorical use of these expressions, which in history bear a meaning quite different from that which they bear in science. The conviction of the historian is the undemonstrable conviction of the juryman, who has heard the witnesses, listened attentively to the case, and prayed Heaven to inspire him. Sometimes, without doubt, he is mistaken, but the mistakes are in a negligible minority compared with the occasions when he gets hold of the truth.

If this view of the procedures of history is true, there remains to be inferred a rather important corollary. If the method of history is æsthetic, then the absence of acceptable form in its composition is simply intolerable. To say that a history is good but badly written and composed is as foolish as to remark that a sonnet is beautiful but clumsily turned. A general acceptance of Signor Croce's theory would rule out of court hundreds of ill-digested books in which the historian has rashly claimed the scientist's immunity from the requirement of form. The loss of these books would be slight. Indeed, a general clearing out of pretty much all the thicket that lies between avowed archivism and real history would be beneficial not only to the public but also to the historian.

"LITTLE TIM" AND TAMMANY.

In the career of such a man as Timothy P. Sulivan, and in the extraordinary manifestations of personal affection for him which his death has evoked on the East Side, we get a vivid glimpse of the secret of Tammany's power. It is an old story, but no fresh illustration of it can fail to fix the attention. Politics and governmental questions are involved, but there is something more—the human element. The name of Sullivan has been something to conjure with in thickly populated districts of New York, not merely because the bearers of it were Tammany leaders and influential politicians. They have been, in addition, a sort of earthly Providence to thousands of men and women and children with whom they have lived in close contact and on terms of fellow-feeling, and whom they have thoroughly understood. Tammany is a wonderful political machine, but the true hiding of its power lies not in organization, but in the man-to-man dealing, the intimate personal relations, which exist between so many of its leaders and the vast concourse of people of all races, with their shifting social conditions, which make up so large a part of the voting strength south of Fourteenth Street.

Among them the dead Sullivan lived and grew rich and politically powerful, but never lost the reputation of being a man of the people, a "good feller," a kind neighbor and friend. This ex-saloonkeeper, this gambler, this politician who rose rapidly to large wealth by questionable means, was at least an adept in the human problem which meant so much for him. He had the name of being a brother of the poor. In their good fortune he rejoiced and in their calamities he was ready with his sympathy. He made himself easily accessible to the troubled, the friendless, the needy. Not only by gifts and assistance in times of emergency, but by acting as a general employment agent, a counsellor, a champion, an intervener between the law and offenders, did he steal away the hearts of the people in his district and hold their political support in the hollow of his hand.

We are not saying that this is admirable. The dark side of the picture must never be forgotten. Sullivan knew how to live upon the vices and the misery of the people he ostensibly befriended. It

is said that he never drank himself, but coined money out of the perverted appetites and degradation of slaves of liquor. He may have been a clean liver himself, for all we know, but the evidence is strong that he levied tribute, directly or indirectly, upon those who made barter of womanhood and domesticated hell-fire on the East Side. And with all his airs of good-fellowship and human kindness, a Tammany leader like Sullivan is really bent like Croker upon working for his own pocket all the time, in disregard of the removable causes of the wretchedness around him. What true and lasting improvement in the lot of the poor in New York is due to the initiative of a Sullivan? Christmas presents and picnics represented merely a largess skimmed from the top of his large winnings. What have such things to do with better tenements and streets, sanitary advances, school privileges, a lowered death rate, and all the general struggle of poverty against adverse conditions? In that long battle, the Sullivans are merely camp-followers, who may indeed relieve now and then a sick or injured man, but who give away only a part of what they have first stolen, and who never get into the real fighting line against the evils and vices and bad environment and misgovernment which keep the poor down and rob them of opportunity and of hope.

All this must not be overlooked as a fearful offset to the charities and friendly activities of Timothy Sullivan among his constituents. The balance is terribly against him; and all that we say is that his traits and methods go far to making intelligible the political power which he won. In his person, we see how Tammany ceases to be a far-away system, a political organization, and becomes, to the streets and homes of the teeming East Side, both near and intensely human.

To comprehend is not, in this instance, to forgive. But it is certainly not to scorn, either. Let prouder political leaders, and public men who hold themselves much higher in the world than "Little Tim" Sullivan, pause and ask themselves, before disdaining him, whether their motives are essentially different from his. If he was ready to build up a political following by an unscrupulous use of the offices, are not they? Was it any worse for a Sullivan to "dig up something" for a henchman in a city department, than for a Parsons to hunt jobs in the custom-house for his helpers? Extremes meet when we get down to the fundamental instincts of politicians. Nor is the question of comparative honesty so easy of solution. We can imagine many complacent Protectionists drawing away their garments from a grafting and gambling Sullivan, in politics to make money, but are they really any better? Is Tammany actually more mercenary than the Home Market Club or the Protective Tariff League? We know of no satisfactory proof that it is. If to seek to get control of the offices and to make laws, for the purpose of putting the public money in private pockets, be the animating motive of Tammany, those who are actuated by it in other fields and under other names cannot escape the condemnation which inevitably falls upon political selfishness and corruption. In this view, there is no essential difference between getting rich by buying city privileges from the Aldermen, and by buying protective laws from Congress. Pursuing the analysis to the bitter end, it is hard to distinguish the methods of a Sullivan from those of an Aldrich or a Cannon.

THE ISSUES IN ENGLAND.

Evidence is piling up that the English Conservatives are not pleased with the way in which the electoral campaign is going. What troubles them most is that the issues are not in the popular mind what they are in the Conservative mind. It is a common experience in democracies; the voters have a perverse way of deciding for themselves what chiefly interests them, with a cool disregard of what party leaders assure them is the main issue. The Conservative managers would have a protective tariff put into the forefront of discussion, with minor emphasis laid upon the vicious features of the budget; but to their disgust and dismay they find everybody talking about the House of Lords and the necessity of destroying its veto. On this point we may quote the *Morning Post*, which says ruefully that "the campaign against the House of Lords is an attempt to prevent the nation from speaking its mind on the great question. . . . If only the mind of the public can be riveted on the fiscal issue during the next few weeks, victory will be assured." In line with this is Joseph Chamberlain's declaration, in the preface which he has written for a political pamphlet, that the Liberals are trying to raise a "false issue." He would have the Conservatives stoutly withstand this effort to "shift the ground"; and concludes with a sentence which certainly does not betray very high confidence in the outcome: "If the issue of tariff reform were submitted by itself, there would be no doubt whatever of the reply."

The Conservatives, however, have no reason to be surprised at the trend of the campaign. They were distinctly warned in advance of precisely what would happen. Lord Rosebery pointed out with the utmost plainness, as did such Conservatives as Lord Cromer and Lord James of Hereford and Lord Balfour of Burleigh, that if the House of Lords threw out the budget the election would be fought primarily on that issue, and that the rights and very existence of the upper chamber would be at stake. It was abundantly predicted, and was, indeed, inevitable, that the battle-cry made possible by the action of the Lords would at once unite and hearten the Liberals and draw to them the support of the Labor party and the Irish. All this has come to pass. Indeed, the Conservatives themselves have been unable to avoid meeting the issue which they dread. Peers have taken the field in their own defence, and the ablest Unionist orators have been compelled to speak about the topic uppermost in public thought. Even Joseph Chamberlain, like Mr. Balfour, is forced to give attention to the "false issue," and makes an argument in behalf of a Second Chamber. This, of course, exposes Mr. Chamberlain to the terrible retorts taken from his own speeches of twenty-five and thirty years ago, when he was a flaming Radical and indulged in harsher language about the Lords than even Lloyd-George's to-day. Here, for example, is an extract from a speech made by Mr. Chamberlain in 1884, in which he asked whether the Lords were to "dictate to us, the people of England, the laws which we shall make," and called upon his hearers never to submit to "this miserable minority of individuals who rest their claims upon privilege and upon accident":

> I have no spite against the House of Lords, but I have an account to settle with them, and I promise I will not forget the

reckoning. I boast a descent of which I am as proud as any baron may be of the title which he owes to the smiles of a king or to the favor of a king's mistress, for I can claim descent from one of the two thousand—one of the ejected members who, in the time of the Stuarts, left home and work and profit rather than accept a State-made creed which it was sought to force upon them. And for that reason, if for no other, I share your hopes and your aspirations, and I resent the insults, the injuries, and the injustice from which you have suffered so long at the hands of a privileged assembly.

We have been too long a peer-ridden nation, and I hope you will say to them that if they will not bow to the mandate of the people they shall lose for ever the authority which they have so long abused.

Mr. Chamberlain is, of course, like all statesmen, entitled to change his views on mature reflection, but nobody knows better than he what ammunition for the Liberals may be drawn from his old arsenals. And he would be one of the first to perceive that the action of the Lords could not fail to arouse resentment among the working classes and cause the Labor Party to seek a closer working agreement with the Liberals. This last is, in fact, in the way of being perfected. It is one of the ominous clouds on the Conservative horizon. There is no hard and fast arrangement between the Labor leaders and the Liberal managers, but many signs of a good understanding. It is not that Labor candidates will not seek election to Parliament in as great numbers as in 1906, but that many Labor candidates will be withdrawn in constituencies where they could not hope to succeed, and where a three-cornered contest might give the seat to the Conservatives. Several members of the Labor Party Executive Committee have recently made significant addresses, in which they have said that "the rights of the nation over-ride the fortunes of a party," and that "we do not want to do anything to help to return a candidate who is on the side of the Peers." Consequently, many an expected Labor candidacy will be abandoned, on the convenient ground that neither the party policy nor the party treasury will admit of it. The recent decision of the law Lords that members of a trades-union cannot be compulsorily assessed to pay Parliamentary expenses, will not make the Labor Party fall suddenly in love with the Peers. Funds will, no doubt, be raised by workingmen voluntarily, but all the greater care will be taken to spend them so as to tell most heavily against the Conservatives.

THE WORLD'S LITERARY CENTRE.

Now that the North Pole has been disposed of, we may turn our attention once more to the one really legitimate field of geographic interest, which has all this time been located in East Africa. While the Arctic Circle has been spinning through its brief day of glory, East Africa has bided in patience and the men who write about East Africa have stuck grimly to their typewriters. They are now laughing last. We shall have just one book about the North Pole. Already we count, upon the shelf, a full half-dozen books about East Africa. It is extraordinary how many people seem to know so many things about what has been usually spoken of as an unknown country. Yet the region between Victoria Nyanza and the Indian Ocean has drawn visitors from all corners of the civilized world for all sorts of reasons. Baedeker, when he takes up East Africa, will find undeniable evidence that the country offers attractions, as the advertisements say, for the missionary, the big-game hunter, the health-seeker, and the journalist. All of them are now publishing their experiences.

It is obvious that but for Mr. Roosevelt, most of these books would never have seen the light. It is not a question of merit; almost without exception, the books make very good reading. But it is not merit that unlocks the publisher's heart when there is no market for a particular brand of goods. Mr. Roosevelt has opened up such a market. He has recently been described as a dynamic geographer, as a man who takes obscure places and puts them on the map. Having done that service for Oyster Bay and Rock Creek Park in Washington, he now comes to the aid of a large section of the Dark Continent. But if the present flood of books on East Africa keeps up, Mr. Roosevelt will inevitably rank high as a dynamic literary pioneer as well as a geographer. The pathways of Mt. Kenia may become more familiar than the streets of the national capital. Every school-boy may soon have at his fingers' ends the annual rainfall, temperature, and barometric pressure at Mombasa. But literature will share in the triumphs of science; the library shelves keep groaning as the lions and rhinoceroses fall.

Mr. Roosevelt can afford to take his time while smaller people write their books. They cannot compete with him. His methods are not their methods and his appeal is not their appeal. Though a thousand volumes be written on the subject, the world is sure to wait for the final word to be spoken by the only man qualified to utter it. No blame to the minor writers if they make hay while the sun shines. There is a popular impression that the books have come from men who sped to East Africa after Mr. Roosevelt's plans for visiting that country were announced. Of the half-dozen books we have referred to, all deal with experiences antedating Mr. Roosevelt's by many months or many years. The further back we go, the more interesting do we find our book as a rule. In recent years, East Africa has suffered from a monotony of big-game hunters, who come for the same purpose, travel up by the same line of rail from Mombasa, and either shoot a large number of lions and elephants or do not. There was more variety in earlier days when travel was by caravan and the route was not marked out so rigidly. The earlier travellers, too, were much more interested in the human inhabitants of the country than in its fauna. No present-day author, of course, can avoid referring with tolerable frequency to the people about him, even if these appear in the rather artificial rôle of game-beaters and carriers for the white adventurer. But in too many books the main interest lies in discussions as to the relative danger of hunting lions, buffalo, leopards, and rhinoceroses. One writer grows very warm on the subject:

There is one other beast which is not often considered in the discussion of the most dangerous animals, and yet men who have had experience look upon him, when he is wounded, with a degree of respect that places him not even second to the lion. I mean a wounded leopard. He is the sneakiest, meanest hunter, and the most cruel, ferocious fighter of possibly any of the cat tribe.

Considering to what trouble and expense the hunter has gone in journeying to East Africa after his skin, how inexcusably thoughtless in the leopard!

Hence, at the risk of being written down in the scroll of the mollycoddles, we express our preference for the old-fashioned books of travel, the straight out-and-out account of the trained eth-

nological observer, or better still, the story told by some missionary worker on the basis of long years of experience. There are books of this type in the new crop, and in them we catch a whiff of the old delight when some of us were younger than we are now, and Du Chaillu wrote of Gorilla Land and Stanley was new and Livingstone was still fresh. We come back with joy to those terrifying Masai and Nandi women with heavy wooden billets distorting lips and nose and ear-lobes almost to the size of a merry widow hat. The young bucks doing their war-dance; the witch-doctor whose efficacy is considered as varying with the amount of noise he makes, as is sometimes the case among doctors outside of Africa; the songs and the games and the queer funeral customs and the initiatory rites for the boys—do these things still fall within the ken of the boy of to-day, or have they been totally eclipsed by the dime novel on the one hand and the Henty and Alger books on the other? Does the modern boy know how queer his own familiar texts sound in the heathen tongues? Has he ever read that in the Lumasaba dialect, "Onward, Christian Soldiers" begins:

> Babana ba Yesu mivinyuke mwesi
> Mulole Yesu, ayu worangiye—

If these lines, falling into the proper hands, shall be the means of leading some boy to the treasures of the old-fashioned book of travel, they will not have been written in vain.

RECENT GERMAN FICTION.

Amazing originality and variety of motives characterize recent German fiction. Adventures surpassing in imaginative flight anything Jules Verne ever invented; the mystery of crime wrought with the craft of Sherlock Holmes; psychopathic problems, marriage conflicts, and tragedies of conscience: surely a respectable array of vital topics. But the question whether the actual achievement equals the ambitious effort cannot be answered in the affirmative. Most of the books are of a nature to rouse a curious human interest rather than to produce an harmonious æsthetic effect. They are more documents than works of art, and it is significant that for the enjoyment which is derived from a well constructed and well told narrative one has to turn to writers not too closely identified with the modern movement.

One of the most remarkable works is "Die andere Seite," by Alfred Kubin (Munich: Georg Müller), the first novel of an artist whose illustrations for a volume of Poe recently gave evidence of striking individuality. His story of life on the other side of the wall which separates the world of reality from that of dreams is a *tour de force;* yet he adds illusion to the fabric of his exuberant fancy. His story of a journey to some remote corner of the world, where his mysterious hero rules over his heterogeneous people in a weird, hypnotic manner, is built up with remarkable consistency. The events occurring in the fictitious capital of that dream kingdom, which is appropriately placed in Asia, are touched with enough of realism to seem possible, even in a more tangible world; but they do not lack that touch of the incongruous which is an essential feature of dreams. The annihilation of the king's power by a clever American, and the destruction of the city by an earthquake, form the strong climax.

Karl Bleibtreu, the champion of the "Revolution der Literatur" twenty-five years ago, has become so completely estranged from the younger generation that he lets no opportunity pass to vent his wrath upon it. This seems to be the purpose of, and perhaps the sole excuse for, his new novel, "Die Vielzuvielen" (Georg Müller), in which he ridicules the Nietzschean proclivities of the time by dividing his people into "Vielzuviele" and supermen. The result is less than one has a right to expect from a book bearing the author's name on its title-page. The delineation of the characters lacks that touch of truthfulness and vitality which would make them portraits of real men and women. Yet some of his sidelights upon social and political conditions show that the author had the material for creating a convincing picture of life in certain circles of Berlin, had he chosen to do so.

Johannes Schlaf is slowly approaching a similarly dangerous attitude towards his time, and seems to see nothing in the life about him but its transient excrescences. In his new novel, "Am toten Punkt" (Georg Müller), he has returned to a psychopathic problem which he treated some years ago in "Der Kleine." The hero is a young college graduate, who serves as secretary to his uncle, a physician engaged upon a work similar to that of Krafft-Ebbing. The investigator sets out to substantiate his theories by personal observations and experiments upon the people about him. The youth becomes the object of his investigations, whose results are carefully recorded; the book closes with the youth's departure from the scene of his ordeal on the death of his mother. The character of the hero is drawn with great firmness, the only inconsistent stroke being his surrender to the fascination of the Baroness Hilsbach, who presides over a salon of intellectuals. The figure of the physician is slightly overdrawn, although exclusive devotion to any one subject of research that lies in the regions of the abnormal, is likely to foster idiosyncrasies of a morbid character.

Somehow the writers of Switzerland, though by no means lacking in understanding of modern problems, do hold aloof from their unhealthy manifestations. This is as true of Ernst Zahn and Maria Schlumpf as of Emil Ermatinger, who, for some years known as a writer on philological and literary topics, is now to be ranked as a promising newcomer in German fiction. There have been many novels of school and college life in its serious and even tragic phases, but none more thoughtful and few more wholesome in spirit than "Der Weg ins Leben" (Berlin: Egon Fleischel & Co.). The son of a widow earning her scanty living as a small shopkeeper in a little Swiss town with the typical population of well-meaning busybodies, is the hero of this story. The boy is destined for the theological career, and his struggles with a curriculum for which he is poorly fitted, the unsympathetic attitude of narrow-minded instructors, and the petty tyranny of a cruel guardian, furnish the incidents of the plot. Love, which looms so large above the horizon of average fiction, enters only as a secondary factor.

Ludwig Thoma, hitherto identified with the short story of Bavarian village life, has written his first novel, "Andreas Vost" (Munich: Albert Langen), and a story of unusual power it is. The rude but honest rustic, fighting bitterly and stubbornly for justice before the law, has been so effectively handled by Anzengruber and other German and Austrian writers, that it was no small task for the author to re-create and individualize the type. Thoma's sympathetic understanding of the Bavarian peasant and of rural conditions throughout the province never showed to better advantage than in this work.

Rudolf Herzog impressively portrays in his novel, "Hanseaten" (imported by G. E. Stechert & Co., New York), representatives of the old families of shipbuilders and shipowners in Hamburg, which form a sort of aristocracy within the bourgeoisie of the old Hansa town. He has created three distinct types of striking truthfulness and vitality. Karl Torsten, the stern man of duty, is the faithful guardian of the name and the fortune bequeathed to him by his respectable forebears. Theodor Bramberg is typical of a degeneracy which seals the fate of a race of hard workers whose strength is exhausted. Between these two the author has placed Vanheil, the man with a capacity for work and for joy, the exponent of a wholesome philosophy and art of living. There is a peculiar symmetry in the grouping of

Herzog's characters, for the three wives stand in a similar relation to one another: Frau Angele Tersten, the fascinating Cuban beauty, light-headed and light-hearted and unscrupulous; Ingeborg Bramberg, a woman of rare intelligence and independence of character, forced into an early marriage; and the charming Frau Vanheil, an artist's daughter whose sunny disposition, no less than her tact and taste, make of her modest home a sanctuary of happiness.

The novel which bids fair to become the most successful book of the season is Gustav Frenssen's "Klaus Hinrich Baas" (Imported by Lemcke & Buechner, New York). It is likely, too, to give the author a higher and less disputed rank in German fiction than he has heretofore enjoyed. For while he has preserved in it all the qualities that made "Jörn Uhl" the most popular German novel of the last twenty-five years, he has outgrown some of the defects that marred the harmony of his earlier work. The new novel has the charming flavor of the native soil, the admirable simplicity of style and directness of speech that distinguished "Jörn Uhl," but it has little of its predecessor's prolixity. Nor does the author any longer force his radical views on religion and the sex problem upon his reader. In the greater part of the book, the hero's mother, unprepossessing in appearance, gruff of manner, but of unbending energy and sterling honesty, is the most conspicuous figure. There is no doubt that the strong woman who had brought out the best there was in Jan Baas proves also the main power that moulds the personality of his son; for the mother's doubts in his efficiency are a mighty spur to the ambition of Klaus Hinrich.

The development, from the little dreamer, who "saw things" whenever he closed his eyes in the obscurity of his bedroom, to the practical business man whose foresight, perseverance, and devotion save the old respectable firm of A. E. Eschen from bankruptcy, is a remarkably strong and consistent piece of work. Throughout his *Lehrjahre* as clerk, his military service, his experiences in India, and his work in a provincial banking-house, the individual Klaus Hinrich Baas is subconsciously fighting the Baas type; but with few digressions, he follows the direct line towards the goal he has set himself. Once only does the family susceptibility to pleasing sensuous impressions overrule his reason and cause him to drift into a by-way; but when the vague idealism and morbid sentimentalism of Martje opens the breach between them, he resumes his old course. With the dissolution of that ill-starred marriage and his return to Hamburg, Klaus Hinrich is himself once more and finally finds in Sanna Eschen the wife and companion he needs in the strenuous life before him. This is the outline of the plot, rich in incidents which are firmly knit into a narrative of absorbing interest. There are some delightful bits of description: the pictures of rural conditions on the Holstein heath, the glimpses of life under the tropical sun of India, the animated panorama of Hamburg's streets, are full of color and atmosphere. The character drawing is excellent; the members of the Baas household, as those of the Eschen family, and even characters of minor importance, stand out against their background in striking outlines. The story reflects the author's personality and wholesome philosophy with a more mature and refined art than his previous works, and is altogether a notable achievement.

A. von Ende.

BIBLIOGRAPHICAL NOTES ON POE.—II.

Last week I called attention to a number of brief essays by Poe that have been overlooked by Poe's editors. In this second and final instalment of my article I wish to direct attention to some neglected versions of certain of the poems and tales.

Of these the most interesting are those to be found in the *Flag of Our Union* for 1849. This periodical, a weekly published at Boston, is, for 1849 at least, of little interest except as being the place of first publication of most of Poe's best productions during his final year. But this interest has been enhanced by the fact that files of the paper had eluded the search of all Poe's editors, except, perhaps, Griswold, who, however, makes no mention of it. The copy that has at last turned up is to be found in the Library of Congress, to which it came, I am credibly informed, through an exchange a few years back with one of the Boston libraries.

Poe's letters had made it clear that at least one of the tales ("Hop-Frog") and three of the poems ("A Valentine," "For Annie," and the sonnet "To My Mother") had appeared in the *Flag* in the spring or summer of 1849; but it was not clear in what numbers they had appeared. It now develops that "Hop-Frog" appeared in the issue of March 17, and that the poems appeared, respectively, on March 3, April 28, and July 7. It further develops that not only these, but five other of Poe's poems and tales appeared there, as follows: "A Dream within a Dream," March 31; "Von Kempelen and his Discovery," April 14; "Eldorado," April 21; "X-ing a Paragrab," May 12; and "Landor's Cottage," June 9. All of these are duly advertised as "By Edgar A. Poe," each of them is formally announced in the number immediately preceding that in which it appeared, and after the first or second of these announcements Poe is proudly proclaimed as "our regular contributor."

Of the nine tales and poems thus brought out in the *Flag of our Union*, only one, "A Dream within a Dream," had appeared previously (in the "Poems" of 1827, 1829, and 1831). One outcome, then, of the unearthing of a file of this paper is to reveal the place and the exact time of first publication of eight of Poe's poems and tales. Another is to establish the authenticity of "Eldorado." This had been doubted, and by no less an authority than the late W. M. Griswold (see Woodberry's "Life of Poe," II, 417). Still another gain is to acquit the elder Griswold of having coined the title, "A Dream within a Dream."

The text of Poe's publications in the *Flag* differs but little from the text of Griswold. In the tales, the only noteworthy variation that I detected in a hasty examination was an additional sentence at the end of "Landor's Cottage," in which Poe mentioned the possibility of bringing out a third number of the series to which this tale belongs. Of the poems, "For Annie" is farthest of all removed from Griswold, showing differences not only in phrase, but also in line-division and in the order of stanzas; but it will be remembered that Poe complained in a letter to Mrs. Richmond that the text of this poem had been garbled by the *Flag*, and gave this as his reason for having Willis publish a corrected copy in the *Home Journal*.* "A Valentine" also displays several variations—seven or eight in all. But "To My Mother" has only one variant reading—*sweet* instead of *dear* in the fifth line; and "Eldorado" and "A Dream within a Dream" differ in no respect from Griswold.

The other variants of the poems to which I desire to call attention are (1) an early draft of the sonnet "Silence" in *Burton's Gentleman's Magazine* for September, 1839; (2) a version of the sonnet "To Science" in *Graham's Magazine* for June, 1841, being prefixed there to "The Island of the Fay";† (3) a reprint of "Ulalume" in the *Literary World* of March 3, 1849 (see Poe's letters of February 16 and March 8, 1849, to E. A. Duyckinck, then one of the editors of the *Literary World*); and (4) a version of the sonnet "To My Mother" in "Leaflets of Memory" for 1850 (an annual edited by R. Coates and published at Philadelphia in the autumn of 1849).

Of these the reprint of "Ulalume" is least important, since it exhibits only one variation not found elsewhere—"till" for "until" in line 57. The versions of the sonnets "To Science" and "To My Mother," however, are of considerable interest, each of them displaying upwards of half a dozen unique readings. But more noteworthy still is the early version of "Silence." This differs radically from all subsequent forms of that sonnet, and should perhaps be accounted an independent poem. In view of this, and because it is not easily accessible in the magazine in which it appeared, I venture to present it here in its entirety:

There is a silence where hath been no sound,
  There is a silence where no sound may be,
  In the cold grave—under the deep, deep sea,
Or in wide desert where no life is found,
Which hath been mute, and still must sleep profound;

  No voice is hush'd—no life treads silently,
  But clouds and cloudy shadows wander free,
That never spoke—over the idle ground;
But in green ruins, in the desolate walls
  Of antique palaces, where Man hath been,
Though the dun fox, or wild hyena, calls,

*It is open to question, however, whether Poe's explanation is to be accepted, since the poem was published under the same date in both periodicals—April 28, 1849.

†This was published in the "Virginia Poe" in connection with the variant readings of "The Island of the Fay" (IV, 307), but was overlooked by both Professor Harrison and Professor Woodberry in their bibliographies and in their lists of variant readings for the poems.

And owls that flit continually between,
Shriek to the echo, and the low winds moan,
There the true Silence is, self-conscious and alone.

Comparison of these lines with "Silence" as we know it in the collective editions of Poe makes obvious the difference between the two: they treat their subject differently, and they possess nothing in common in phrasing. It is in this difference, perhaps, that we are to seek an explanation of the neglect that has been visited upon the earlier version. For in all that has been written about Poe I can discover only one allusion to it—that of Professor Woodberry in the first edition of his life of Poe (p. 115), where he mentions a sonnet, in *Burton's* for 1839, "conjecturally [Poe's], although never afterwards acknowledged"; and even this bare mention Professor Woodberry omits in the revised edition of his work. But the poem is surely Poe's. It is true that it was signed merely by the initial "P."; but so, too, were Poe's "Fairyland" and the lines "To the River ————" in *Burton's* for the preceding month; and so also was the later and perfected "Silence" as republished in the *Broadway Journal* in 1845. Moreover, appearing as it did in *Burton's* while Poe was one of its editors and after he had published there other things signed in the same way, I cannot help feeling that Poe, if the lines were not his, would somehow have made it clear that they were not—as he did with more than one thing wrongly attributed to him. Finally, it is not difficult to discover in this early draft a parallelism in substance with several other things by Poe, notably his "Spirits of the Dead" and "The Valley of Unrest" and the prose essay "Silence—A Fable."

THE PARTY SYSTEM.

TO THE EDITOR OF THE NATION:

SIR: The misfortune that has befallen the Democratic party of late years in national elections, depriving it of control of the three departments of our government, has been attributed to various causes, but one cause which may be vital is in danger of being overlooked. That is the fact that the party has been making itself the mouthpiece of demands for particular acts of legislation, abandoning thereby its proper position as one of the two great political parties by means of which the government of this country is carried on.

In the countries of Continental Europe government by party has not developed along the same lines as it has in England and the United States. Political parties are numerous in those countries, and each represents demands for some particular legislation, or it may even be a demand for the establishment of a particular family or person in place of the established government. To secure a working majority for the ministry a *bloc* is necessary. This is formed by two or more parties, which are willing to sink individual differences for the purpose of achieving certain general results in which they are all interested. The *bloc* takes in a manner, and for a time, the place of one of our two major parties, the one in power. And this sinking of individual differences is the only way to accomplish general results in politics. In England and the United States, however, for reasons which it is unnecessary to discuss here, the electorate has divided itself into two bodies, based upon a fundamental difference in human nature, one party being broadly the party of Personal Rights, the other that of Order.

From its organization the Democratic party has upheld principles which it has believed favor the liberty of the individual, even at the expense of governmental efficiency; the other party seeks to attain the object of government by strengthening the arm of the Administration, even at the sacrifice of some individual liberty. Each party appealed to those voters who favored one set of principles as compared with the other, and this divided the voters into two practically even parties. Of late years, however, the Democratic party has abandoned its position as the representative of principles with which the difference in human nature endows half the world, in its advocacy of particular acts of legislation, thereby taking a new position, which necessarily appeals to a smaller number of persons. It no longer represents the party of Personal Rights as opposed to the party of Order, but by limiting its support of individual liberty to certain specific tenets it has effected a displacement of the line separating the two parties. Had these demands and promises for particular legislation been presented merely as subordinate features of the party's platform; had they been so treated by the candidates, the orators and the newspapers of the party; had the main appeal of the party been made on the strength of its general principles, and had these special demands and promises been presented as incidental to those general principles, instead of making the acceptance of these particular tenets a shibboleth to good standing in the party, then the Democratic party would have continued to be a true political party. It would also have been in a position to accomplish more in furtherance of its principles than, with what superficially appears to be greater effort, it has accomplished.

The Republican party does not fall into this error of depending upon promises of particular legislation instead of general principles, and it has certainly accomplished more in the way of progressive legislation than its rival. That party means to the public a general tendency in favor of certain things, and it wins its victories by reason of the general appeal it thereby makes. Nor did it come into power because it advocated the abolition of slavery. It represented one of the broad tendencies of politics, of which demands for repression of slavery and polygamy in the Territories by the national government, national homestead laws, internal improvements to be made by the national government, a protective tariff, and opposition to disunion were typical manifestations. The Abolitionists and Freesoilers accomplished their purposes through the success of the Republican party, which by representing a general tendency was able to become a majority party, and accomplish what the propagandist parties had not been able to obtain for themselves.

AVIATION IN 1783.

TO THE EDITOR OF THE NATION:

SIR: Though it has perhaps occurred to many of us that the present is only the second of two periods of intense interest in the problem of aerial navigation, we do not all remember, perhaps, that the earlier period was for several reasons one of much greater excitement. When Etienne and Joseph Montgolfier, on June 5, 1783, filled a linen bag with hot air from a straw fire, and sent it into the air to a height of a mile and a half, and when, in November of the same year, M. François Pilâtre de Rozier and the Marquis d'Arlandes made an ascension from the Bois de Boulogne, remained in the air half an hour, and came down uninjured, a new path was opened for human travel; and as the difficulties which caused invention in that direction to languish for a century were not at first evident, at least to the lay mind, speculation as to the possibilities of aerial travel had in 1783 all the scope of ours and more of novelty.

The recent International Exposition of Aerial Locomotion, held at the Grand Palais, in Paris, had a section devoted to reminders of the earlier period, and their number and variety attest an enthusiastic interest in the wonderful new discovery that must have thrown all other preoccupations into the background, even at that troubled time.

There was, first, a model of the Montgolfier balloon. Then, in a corner by itself, the remarkable Tissandier collection. I translate from M. J. Saint-Alban, who writes of the exposition in a recent number of *Les Annales Politiques et Littéraires:*

After the first experiments of the Montgolfiers, of the Robert brothers (December, 1783), and Pilâtre de Rozier (see above), the *globe volant* became the most fashionable of all emblems. Everything was *au globe;* gloves, handkerchiefs, clothing. Artists and artisans taxed their ingenuity and their imaginations. Seamstresses embroidered nothing but balloons, manufacturers of woven stuffs and print goods demanded aerostatic patterns and nothing else. Dealers in bibelots exposed to the public gaze only creations *au globe volant,* and the cabinet-makers were not slow in joining the procession. This movement of industrial art lasted for several years. Interrupted by the Revolution, it appears again with the Directory, in the ascensions of Mme. Blanchard (her last attempt resulted in her death, June, 1819), of Mlle. Gamenin and of her brothers.

It, of course, gives pleasure to a young dandy who is interested in aviation, to wear a balloon as an ornament, to cover his head with a round hat—*chapeau au ballon;* of course, a lady of fashion appreciates a handkerchief and a pair of gloves embroidered with balloons; of course, she enjoys reading on her fan quatrains composed in honor of the heroes of the air, or seeing on it a representation of Pilâte de Rozier in the act of falling on the French coast.

But it is still greater pleasure to lie down in a bed sculptured in the form of a balloon-basket and adorned with attributes of aerial navigation; to read the hour from a watch in the shape of a globe, whose balance-wheel carries little aeronauts in their baskets.

And even this does not satisfy our snobs. They insist on sitting in an arm-chair of which the wood as well as the upholstering speaks of aviation; on eating from plates which repeat the triumphs of the first conquerors of the air; on dipping their goose-quills into an ink-well in the form of a balloon. . . .

It is true that the aviators are influencing the modern art of the bibelot—are we not told that one of our prominent journalists wears shirts with a figure representing aeroplanes? But this craze is mild, compared with that revealed to us by the curious collection I am discussing.

It may be added that M. Gaston Tissandier, whose collection is thus furnishing the most eloquent commentary possible on the hopes which France conceived from the success of Etienne Montgolfier, is a brilliant French scientist who has himself invented a dirigible, and who is an authority on the subject of aeronautics.

PHILOLOGY AND CRITICISM.

TO THE EDITOR OF THE NATION:

SIR: It has been borne home to us pretty often of late that philology is no better than she ought to be. It was becoming clear that philologists were a sorry lot. But now it appears (see the *Nation* of December 16) that all this is a mistake. Philology is really a gay science, so gay as to be hardly more than the playground of romancers. With this settled, there is nothing for the strictly practical-minded but to turn to the workshops of the critics. Here the bright tools of epigram, paradox, and trope are in ceaseless play: obviously things are being done. The very fertility of criticism can bring but shame upon the poor philologist with his occasional article and his unprofitable dalliance with Paul's "Grundriss" and Professor Sievers. Without question he has wasted his time—a sad certitude which is only emphasized when he passes from the critic's shop to the gay bazaars where the critic's wares are displayed. Here is the meed for cultivating that turn for style which cuts so clean and so often to the very heart of the matter. Why, then, bury one's talents in the proceedings of learned societies?

But one must not suppose that the scholar's romantic life is a life of unreproved pleasures free. On the contrary, it is encompassed by innumerable fears. To-day's victory may be to-morrow's disaster. A new manuscript may quickly upset the most carefully managed argument and turn joy to grieving. Clearly the game has its hazards. Worst of all, the scholar can never forget that facts are relentless; sooner or later they will out. Do what he will to escape, he is always within their danger and too often discomfited by them. How, then, can he ever know the sweet securities of criticism? How can he ever attain to that serene intelligence and bland confidence which led a distinguished living critic to give chapter and verse for the high-water mark of English prose? You may say, if you dare, "Tide is not quite high there, Professor Saintsbury." But you should see that the professor's position is unassailable. If you threaten him, he will only ridicule you from behind the shining ramparts of his style. Was it not Swinburne who said with impunity that Musset's poems were but "decoctions of watered Byronism"? Not that criticism has not its passages at arms. Mr. James, for instance, did not in the least approve that phrase of Swinburne's. And how often have we heard that Dickens's characters both are and are not caricatures. But there is no danger here; these are gentlemanly differences, which work no harm

Urbana, Ill., December 18.

COLLEGE ENGLISH AND A PROPOSED REMEDY.

TO THE EDITOR OF THE NATION:

SIR: We have lately heard much of the difficulties of teaching English in our colleges. In my opinion the chief difficulty is that the student of composition has nothing to say, no meaning to express. His exercises in composition are purely for the sake of expression. His problem is then, not to find an expression for his meaning, but a meaning for his expression; and meanings, of course, are born, and not made. There is thus an absence of the fundamental condition of good writing—which is to have something you wish to say—and also of a basis for the most stimulating and effective criticism; for it is rather useless to accuse a student of failing to express his meaning when his meaning is of no consequence.

Now there are many occasions within the range of the college curriculum when the student's meaning is genuine and unforced—when, for example, he answers a question in examination or writes an essay to test his knowledge of some special subject. Here he has a spontaneous motive for expression, and for making his meaning clear. And just here are his deficiencies in language most obvious and exasperating. Instructors are apt to encourage these deficiencies by telling the student that in examinations matter is everything and style nothing. It is, however, out of the question for an instructor in history or physics or philosophy to give more than a passing attention to expression. Why should not the department of composition utilize these examination papers and essays as a basis for its work? Why should the student be called upon to invent meanings when he already has meanings badly expressed? to write fiction when he is unable to state a fact? Examination papers in particular are necessarily written in more or less hurry and confusion. Just for that reason they should furnish an excellent basis for practice in careful writing; for there is no more profitable exercise for the practical or for the artistic ends of composition, than to take something you have already tried to say, and said badly, and say it again so as perfectly to express what you mean.

EARLY REFERENCES TO ROBIN HOOD AND LITTLE JOHN.

TO THE EDITOR OF THE NATION:

SIR: The recent publication of an elaborate and valuable study of "The Gest of Robin Hood" (by Dr. W. H. Clawson, University of Toronto Studies, Philological Series, October, 1909) makes pertinent this note, in which I present the earliest reference to the name Little John, and the second earliest reference in poetry to the Robin Hood ballads. Neither was known, I believe, to Professor Child, or has ever been called to the attention of scholars.

In the tallage made towards the fine to the Lord Abbot, for the Feasts of Easter and St. Michael in the first year of the reign of King Edward "after the Conquest the Third," on Friday after the said Feast of St. Michael, and for other business of the village of Faversham in the time of Robert le Hert, Mayor of the same, there occur these names, among others, under the heading *Portatrices* (the gender being accounted for by the fact that the first two mentioned are women).

Petyt Johan (paying 6 pence).
Lytyl Johan (paying 4 pence).

Portatrices is to be rendered carriers or carters, and we may, therefore, presume that here, as in Little John's case, the name was given ironically. The document is described in the Hist. MSS. Commission, appendix to VI Report, p. 505.

The Robin Hood passage, which is only antedated by the famous passage in "Piers the Plowman," occurs in a MS., of the first half of the fifteenth century, of Chaucer's "Canterbury Tales." The MS. belongs to the Royal College of Physicians, in London. On folio 258A the copyist (or an earlier one) altered Chaucer's lines in "The Tale of Sir Thopas" so as to read:

Men speken Romaunces of price,
Of hornchield and Ipotice,
Of Robynhoode and goode ser Guy.

This substitution of Robin for Bevis of Hampton indicates little as to the scribe's respect for the Gest, or the ballads; but it is impossible not to believe that he appreciated Chaucer's satire keenly; for in many places in the MS. opposite Chaucer's best jokes, he notes on the margin: *Nota, nota optime!*

HENRY NOBLE MACCRACKEN.

Literature.

MR. BROWNELL ON AMERICAN PROSE.

American Prose Masters. By W. C. Brownell. New York: Charles Scribner's Sons. $1.50 net.

Those who have had the pleasure of reading Mr. Brownell's stimulating studies of the "Victorian Prose Masters" need only be assured that this volume is in no way inferior to its predecessor. The praise is high, for its author is one of the few American writers to whom literary criticism is a matter of profession, of conscience, and of art. He sets to work adroitly; he exacts of himself a rigorous candor; his report is definite, perspicuous, symmetrical. In an unusual degree—we shall use the ancient phrase reluctantly but necessarily—he has the defects of admirable qualities.

His method is almost inflexibly systematic—for example, he subjects Cooper, Hawthorne, Emerson, Poe, Lowell, and Henry James to substantially identical tests for substance, philosophy, culture, and style. He does not, as has been said of Sainte-Beuve, draw all men six feet tall; he thinks, however, that all

who are less than six feet are something less than men. Consequently, he is able to say of Poe: "As literature his writings are essentially valueless"—though he regards Poe as the "one absolute artist of our elder literature." However wholesome as an antidote for the excesses of the Poe idolaters, this is establishing standards with a vengeance.

His point of view is studiously impersonal. It may be suggested by his own subtly phrased comment on French social intercourse in "French Traits": "The speech and action of each communicant encounter those of the other without in any degree involving either individuality behind them." The withdrawal of the critic behind his standards is in the case of Mr. Brownell almost complete. He scorns the reader who judges with his nerves. He himself is unwilling to judge even with his character. He is all but successful—far more successful than his admired Arnold—in producing the illusion that he is representing "things as they really are." Like many writers of fiction who have aimed at a philosophically impossible "objectivity," he has sacrificed something of force and vitality.

Furthermore, the unmistakable man—New Yorker, cosmopolitan, rationalist, Horatian—peers here and there over the edge of his entrenchments. He is visible behind the sharp thrust at New England as the "incubus of our civilization," and at the self-complacency of her literary historians, particularly Professor Wendell, who "tucks" American literature "into the confines of Harvard College." He is visible again in the reminder to Professor Lounsbury, apropos of Cooper's heroines, that "in the quiet scholastic closes of New Haven no doubt they like a little more ginger, 'in fiction at least,' than palates more accustomed to it demand." Though these vivacities are exceptional and incidental, they are significant, breaking as they do the suave decorum generally maintained. They help us to understand the unaccustomed warmth of Mr. Brownell's appreciation of Cooper, who was not bred by the frog pond of Boston Common. They throw some light upon his resolute depreciation of Hawthorne, who, he says, is lacking in substance, and is seldom re-read.

His style is an effective instrument for what he regards as the business of the critic—characterization. Disciplined, pondered, slightly hesitant, its virtues are not those of Thackeray, whose prose he extremely admires, but rather those of Henry James, whose complexities he deprecates. It aims not at fluency and directness, but at the last degree of expressiveness. It is both ample and precise, but it is somewhat deficient in color and tang. Its movement is checked by a fastidious concern for shading. Its vocabulary is select, psychological, Latinate—the style of a man who picks his way gingerly through the dictionary, abhorring carnal odors and the touch of the agricultural implement. Henry James, for example, he says, has

> clearly preliminarily mastered his complicated theme in its centrality. . . . His work, he seems to say, is done when he has constructed his labyrinth in emulating correspondence with the complexity of his model, life, and at the same time furnished a potentially discoverable clue to it.

If we dwell at some length upon Mr. Brownell's procedure, it is because he himself keeps us constantly reminded that criticism is a fine art. Irritating as his air of premeditation may become, it is the comment of a consciously exigent and accomplished connoisseur upon a genial improviser that makes his study of Lowell not merely entertaining, but finely instructive, and, in its way, definitive. Though he dissents with refreshing spirit from the recent depreciation of Lowell's scholarship as "not up to current standards"—praying that *belles-lettres*, at least, may "hold out a little longer before it is transformed into scientific feudalism or declines in Byzantine decadence"—he does find the man essentially of the dilettante temperament. His definition of this variable term and his application of it are worth recording:

> He was a dilettante of an original type in being so thoroughly American. He had the disinterested delight in the delectable that characterizes the dilettante as distinguished from the artist, to whom the delectable is material. His singularity—as a dilettante, not as an American—consists in his being attracted by the elementary quite as much as by the differentiated.

This clearly defined central conception Mr. Brownell—who is much attracted by the differentiated and scarcely at all by the elementary—elaborates through sixty pages. The quality of Lowell's temperament appears in his culture; though he reads with the industry of a Chinese scholar, he always follows his natural bent, and so fails of an adequate discipline. It appears in his criticism; for example, he immensely admires Dante and knows everything about him, "but he does not communicate because he does not express his general conception of Dante, and he does not because he has not himself, one feels sure, thought it out into definition." It appears in his style; it is praised for its brilliant and felicitous detail, but "its defect is that it *is* detail, and so accentuated as to nullify the *ensemble*, on which style inexorably depends." Preferring rather to read than to think, to color than to design, to decorate than to construct, he falls short through temperamental indolence of the great architects of prose—of the great critics. The key to criticism is as simple as the key to success: "Criticism is not the product of reading, but of thought. To produce vital and useful criticism it is necessary to think, think, think, and then, when tired of thinking, to think more." Thus Mr. Brownell, conspicuously exemplifying his own principles, maintains a masterly unity in variety; he attacks truth from every point of the compass, but his arrows all fly to the same mark; his own detail, frequently polished to brilliance, is not idly ornamental but organic, like links in chain armor. The workmanship in general is so admirable, the principles so explicit, so sound, so classical, that the essay might well serve both as a model of criticism and as a brief manual of critical theory.

What we miss in the equipment of this "impeccable Aristides" of criticism—to adapt one of his own phrases—is perhaps a power that is, after all, extra-critical. It is the power to convey along with his acute judgments of men and things the ardor of the scholar of whom Giuseppe Caponsacchi speaks—the scholar lost in his books, who yet knows that life is greater than all the books ever written, and who, while he reads, dreams, "Thus should I fight, save, or rule the world." Mr. Brownell probably has no desire either to fight or to rule the world. We doubt even whether he would care to save it, if it had to be preserved *en masse*. Yet in the refinable remnant he feels a temperate interest, and points out, though with marked freedom from demonstrativeness, the way of salvation, through culture. One feels tempted to apply to him his penetrating remark on Emerson in the most deeply sympathetic of these studies:

> His feelings really glowed, one may say, within extraordinarily narrow limits. When he could exercise his *Vernunft* in complete neglect of his *Verstand*, he reached the acme of his exaltation.

But the application would be unjust. Indeed, he is bent on showing how Emerson himself became an apostle of culture in spite of his disdain for culture, and a kind of divine democrat in spite of—or rather because of—his hatred of the mob and his shrinking from the vulgar:

> If his emotional nature lacked warmth, what eminently it possessed was an exquisite refinement, and a constituent of his refinement was an instinctive antipathy to ideas of dominance, dictation, patronage, caste, and material superiority whose essential grossness repelled him and whose ultimate origin in contemptuousness—probably the one moral state except cravenness that chiefly he deemed contemptible—was plain enough to his penetration.

This is paradox put to some purpose. From it is deduced one of Emerson's greatest services both to America and to the rest of the world, a service, as Mr. Brownell says, subtly rendered, "be-

ing, in fact, rather an implication of his writings than anywhere explicit in them—*the rationalization of democracy through the ideal development of the individual.*" It would be impossible to put in more concise form the integrating principle of Mr. Browneli's own thinking: it is the democratic justification of Brahminism. What distinguishes his Brahminism is its intensely intellectual and rational quality; it outcasts all emotions situated lower than the head. But in the "positive perfume of sensitive intellectual refinement" it becomes almost—not quite—intoxicated. If in its survey of literature, British as well as American, it undervalues the elemental, the spontaneous, the old-fashioned "spiritual," these virtues have already had their enthusiastic appraisers, and perhaps may generally be trusted to look out for themselves, anyway. If it sets a very high price on pure intelligence, self-conscious refinement, and the new-fangled "reality," there is an idea affixed to every estimate, which compels the reader either to defend or to abandon his prejudices. If it frequently points to an unattainable excellence, we can—as Carlyle reluctantly admitted to Emerson after expressing some regret that the Concord sage was not doing precisely what he himself was doing—we can "spare a man for that, too."

CURRENT FICTION.

The Ball and the Cross. By G. K. Chesterton. New York: John Lane Co.

It has long filled Mr. Chesterton with fiery indignation that the devil should have all the good music, art, and literature. If a mediæval juggler could stand on his head in honor of the Virgin, if Luther could smoke tobacco to the glory of God, he can see no reason why a twentieth-century journalist with a command of epigram and paradox should not write a rollicking allegorical romance in defence of the Cross. And that is why the crash of glass in the office-window of the atheistical Turnbull is the challenge to a series of duels—with long swords out of a curiosity shop—between him and the Roman Catholic Highlander MacIan—a series of duels which carries the participants hotfoot all over England, and the reader, not quite so rapidly, through a book of four hundred pages. In the course of their fighting flight, the duellists fall in with a number of more or less realistic symbolical personages—a Nietzschean, a Tolstoyan, a French rationalist, etc.—who, according to their several dispositions, further or hinder the combats for the vindication of the honor of God. In the end the atheist, the Catholic, and most of their abettors are rounded up in the mad-house; the mad-house is fired, and the devil, its superintendent, escapes in an airship; and the swords of Turnbull and MacIan form a cross in the ashes.

The burden with which this romance is freighted is that unbelief is madness. Turnbull and MacIan are the only sane men in England. Turnbull is sane, because he believes that God does not exist; he is eager to fight for his faith—therefore his author respects him. MacIan is sane, because he believes that God does exist; he is eager to fight for his faith—therefore his author loves him. It is perhaps the most interesting aspect of this book that a Roman Catholic is its hero. In Evan MacIan, Chesterton is manifestly drawing his own idealized portrait, and he does it in his happiest manner:

> Evan lived like a man walking on a borderland, the borderland between this world and another. Like so many men and nations who grow up with nature and the common things, he understood the supernatural before he understood the natural. He had looked at dim angels standing knee-deep in the grass before he had looked at the grass. He knew that Our Lady's robes were blue before he knew the wild roses round her feet were red. The deeper his memory plunged into the dark house of childhood the nearer and nearer he came to the things that cannot be named. All through his life he thought of the daylight world as a sort of divine débris, the broken remainder of his first vision.

That is effective writing. Yet Mr. Chesterton had said the thing quite as finely in "Orthodoxy"—"according to Christianity, *we were indeed the survivors of a wreck, the crew of a golden ship that had gone down before the beginning of the world.*" And not merely this, but most of the best things in the later were anticipated to some extent in the earlier book. It is not necessary to explain the sometimes obscure symbolism of the "Ball and the Cross," for the reason that "Orthodoxy" explains it. Mr. Chesterton wrote his annotations before he composed his text. He made a key and then constructed a lock to fit the key. For example, "The spike of dogma fitted exactly into the hole in the world" ("Orthodoxy") is the only thing that makes intelligible to us the exclamation of the idiot monk in his cell ("Ball and the Cross"), "Spike is the best—it sticks out." This reversal of the customary process suggests the limits of the author's success in this field of fiction. Fine phrases, paradoxes, nappy metaphors, even long chains of argument burst into his mind spontaneously in a flood of light. But he sustains his narrative and his allegory by sheer force of will and intelligence. His logical processes are inspired; his romance is excogitated. It is necessary only to compare the exquisitely veiled malice of Anatole France's little masterpiece, "Putois," with Chesterton's brutal English reformation of it to feel how unequally the men are matched with this kind of weapon. And yet can all French literature supply a sentence quite so satisfactory in its way to the Anglo-Saxon spirit as this?—it is, if we may be permitted the figure, the Sancho Panza half of Chesterton in a nutshell: "Everything his eye fell on it feasted on, not æsthetically," (there is a thunderbolt between the commas), "but with a plain, jolly appetite as of a boy eating buns"!

The Beggar in the Heart. By Edith Rickert. New York: Moffat, Yard & Co.

The Heart belongs to Miss Tyrrhena Sidonia Pickersgill, daughter of an American parson. She goes abroad to study art, and in Paris acquires the nickname "Petty-Zou." There and in London she spends a good many more years than there is any reason for, making little statuettes for an uncertain pittance, and dodging the altogether proper and desirable advances of the naturally-to-be-expected lord-in-the-case. She is, in short, one of those sprightly, youngish heroines in whom the modern feminine audience so much rejoices. Her little audacities and rebellions, her pouts and subterfuges, will have their appeal for those who admire the "bachelor maid." In fiction, at least, the charm of that young person depends on the ultimate triumph of her femininity over her theory of independence and equality. "Petty-Zou" is, perhaps, too consciously bedizened with prettinesses greatly to please any other than her own doll-loving sex. Of course, in the end the beggar in her heart gets what it wants in the person of the lord in question; and matters are made altogether comfortable by the discovery that "Petty-Zou" is a near descendant of the Earl of Uxminster, a perfectly eligible old rascal. The marrying lord is better than the average woman's hero: at all events, he is no pale shade of Rochester. But it is to be doubted if many men are able to read the book without irritation at the aimless sprightliness with which many of its pages are filled.

The Sinking Ship. By Eva Lathbury. New York: Henry Holt & Co.

The writer has endeavored in this story to accomplish a very difficult feat—endeavored with an intensity of effort that results in occasional crudity and bathos, but that achieves its result to a praiseworthy degree. The theme of the regeneration of a worldly group by the introduction among them of a being of higher fibre has been treated with varying degrees of beauty and success by the obvious methods of the Morality. In the present instance, this theme has been approached more subtly, the intention being to present it, not in a symbolic masque, but by means of a cross-section of the actual world of every-day. It is a more exacting business to deal

with wayward human beings than with clearly labelled abstractions, but those who essay it have their reward, and while "The Sinking Ship" falls far short of the dramatic power of "The Servant in the House" and the quaint sweetness of the "Third Floor Back," it has the strength of reality. The setting is entirely in the atmosphere of the stage, and the regenerative force that revolutionizes life for the player-folk concerned is the daughter of the star. The mysterious influence of this young girl is due wholly to the fact that the Christ of the Gospels is the constant master of her mental house, and His spirit and teachings are the mainspring of her universe. Her simple and vital faith gradually convinces those who surround her, her mother being the last to surrender.

The opportunities for weakness in the presentation of such a story are many, and the writer has availed herself of them to an unfortunate extent, especially in the portrayal of the mother, who is too much the conventional siren of the *coulisses*, and the young playwright, who is represented as a consequential weakling; but, in the character of Sibyl, she has been inspired by her subject, and has transmitted at moments the girl's atmosphere of quiet strength.

The Backwoodsmen. By Charles G. D. Roberts. New York: The Macmillan Co.

All but one of these tales include animals among the *dramatis personæ*, but all of them have their human figures; from which it will be seen that Mr. Roberts has entered upon a new vein which ought to yield magazinable stories indefinitely. After all, animal biography, however imaginative, has its limitations. What with Mr. Roberts and Mr. Thompson Seton and Mr. Long and their host of imitators, we seem to have had pretty much all the profitable changes rung upon the every-day experiences of the bear and the lynx and the muskrat and the beaver and the other "kindreds of the wild," as Mr. Roberts is fond of calling them. But begin to combine them, singly or in groups, with the manifold varieties of the human genus, and you have evidently provided for an indefinite extension of the game. It must be said that Mr. Roberts's critters are better than his humans—more "convincing," that is, as individuals. The men in "MacPhairrson's Happy Family," for example, are types, not persons. Mr. Roberts manipulates them cleverly enough, but they have no motion of their own. "Red McWha's" conversion from brute to seraph is a fiction stranger than truth. Mrs. Gammit and her sporting adventures are incompetently farcical; and little Melindy, who with her little hatchet is too much for lynxes and bears in the open, is incompetently melodramatic. The best thing in the volume is the description of a fight between a mink and a raccoon—or so it seems. Can this be because the reader does not know the difference between a mink and a raccoon, and does know the difference between a human being and a story-teller's mannikin?

GENERAL SHERMAN.

Home Letters of General Sherman. Edited by M. A. De Wolfe Howe. New York: Charles Scribner's Sons. $2 net.

It is long since the biographical side of American history has received such enrichment as is furnished by this volume. Readers of the "Memoirs" and the "Sherman Letters" will not, of course, look to the present selection of personal correspondence for large substantive additions to our knowledge of Sherman's public career, though of informing supplementary data there is no lack. Neither does Mr. Howe open for us that inner sanctuary of personal and family life which, notwithstanding its mortal fascination for many a modern biographer, is best kept sealed. What we have, instead, is a picture of Sherman the man: ambitious, energetic, resourceful; chafing often at his limitations, and resenting hostile criticism and misrepresentation, yet faithful to his duty and his friends; keenly observant, tender-hearted, affectionate, and modest. With comparatively few exceptions, the letters are addressed to his wife, to whom, from the beginning of the acquaintance which resulted in marriage, he opened his heart and his career without restraint.

How Sherman found time, amid the engrossments of a busy life, to write so much, is less of a wonder than that he could write so well. These letters have a literary distinction which entitles them, quite aside from the prominence of their author, to high regard. He possessed, in a notable degree, the power of description. The life of a cadet at West Point, a social function at St. Louis or New Orleans, a Spanish play in California, a storm at sea, or a battle, is sketched with equal facility. He shows, too, a dramatic effectiveness unsurpassed by any of his military contemporaries whose letters have been made public. Only after the civil war, when he was less often separated from his wife for long periods, do the letters become brief and rather matter-of-fact notes. Even then they remain essentially intimate and detailed.

Sherman frankly loved a military career. In 1842, with as yet no experience beyond the routine duties of an officer in time of peace, he resisted stoutly the suggestion that he should retire from the army, feeling sure that the time was approaching when a soldier would have an opportunity to distinguish himself. Although he was, during the Mexican War, depressed at the unimportance of his California service, he nevertheless accepted it as part of the necessary preparation for more responsible command. His later short experience as a lawyer and business man, the latter of some importance and distinctly creditable, only confirmed him in his judgment that civil life was not for him; nor did he, in the subsequent period of his greatness, look with favor on the suggestion of a Presidential candidacy. "I would receive a sentence to be hung and damned," he wrote in October, 1864, "with infinitely more composure."

Impressions of men and events, together with speculations as to the future, are set down freely in these letters. He had a poor opinion of Frémont's volunteers, and deprecated the unstinted praise of Frémont by Polk and Marcy. Of Stockton, the "Sailor General Grandioso," he wrote: "He is a great blatherskite, talks too much, and does too little." His keen perception of the public opinion of the enemy, conspicuously shown throughout the civil war, appears in his California experiences. In May, 1847, he wrote that, while "no one here now dreams of a retrocession to Mexico, all admit that these Guachos or Rancheros are not afraid of us, and if encouraged from Mexico would try again the chances of war, more for the fun of the fight than with any ultimate design of securing their own independence." Naturally, he was not averse to territorial expansion, writing from New Orleans in November, 1852, where "Cuba is all the go," that "if Cuba can be got fairly, it will be a beautiful state, and I would not object to a station at the Havannah as commissary." Only once does his judgment seem to have gone entirely astray, and that was in 1859, when he wrote: "I have with you my doubts about Kansas. It has not the elements of permanent prosperity—a hard climate, neither one thing or other, poor timber, stone, no fuel, and no prospect of manufactures."

Late in 1859 he went to Louisiana to assume the direction of a new military school. As a schoolmaster he had his full share of trouble with turbulent pupils, but from the outset he quelled disturbances with a firm hand, and contrived to keep on good terms with the politicians. He knew the South well from previous military service at Mobile, Charleston, and New Orleans; and he felt, both then and afterwards, no confidence in the capacity of the negro for citizenship. He was loath to believe that secession would become an accomplished fact, though he wrote repeatedly that, if it did, he would side with the North. His military judgment taught him that, in the event of war, the great struggle would be for the control of the Mississippi, and that the South, destitute of a navy, would be unable to raise a blockade without the assistance of England—an assistance

which he was certain would never be received.

Sherman's part in the civil war has been so fully exhibited elsewhere that his accounts of military operations in the present letters, though exceedingly interesting, must be passed over. He felt from the first that it would be a long war, and had little patience with Lincoln's cautious policy and the halting steps of Congress. Of the volunteers allotted to him he had a poor opinion, complaining bitterly of their lawless plundering, their insubordination, and their insistence upon leaving the service the instant their term of enlistment expired. "No Goths or Vandals," he wrote after the first battle of Bull Run, "ever had less respect for the lives and property of friends and foes, and henceforth we ought never to hope for any friends in Virginia." His bitterest reproaches, however, are reserved for the Northern press. This he repeatedly charges with responsibility for bringing on the war; and he complains that its detailed accounts of military operations and plans hindered every movement of the Union forces at the same time that they kept the enemy fully informed. "I will never again command an army in America," he wrote in 1863, "if we must carry along paid spies. . . . I shall notify Mr. Lincoln of this if he attempts to interfere with the sentence of any court ordered by me." Naturally tenderhearted and considerate, he could nevertheless yield to military necessity, as he understood it, and sacrifice men and desolate the country without a qualm; yet he retained throughout the war a kindly feeling for the South, wondered that people should think him a monster and try to kill him, and opposed the enlistment of negroes largely because of its irritating effect upon the Southern whites.

Sherman bore the inevitable lionizing of his later career with mixed modesty and restlessness; but he found no pleasure in public functions, and avoided them when possible. His amusing account of his sufferings at the dedication of the Burnside monument in Providence will strike a sympathetic chord in many an official bosom. For the Republican policy in reconstruction he could not feel approval. "The negroes don't want to vote," he wrote from his camp opposite Richmond in May, 1865. "They want to work and enjoy property, and they are no friends of the negro who seek to complicate him with new prejudices." The sober judgment of the historian must approve the judgment of the great commander, who, writing in February, 1868, after the breach between Johnson and Stanton, summed up his hopes and desires in these words: "I do want peace, and do say if all hands would stop talking, and writing, and let the sun shine, and the rains fall for two or three years, we would be nearer reconstruction than we are likely to be with the three and four hundred statesmen trying to legislate amid the prejudices begotten for four centuries."

The editorial work has been done with intelligence and discretion. A brief connecting narrative binds the letters together wherever necessary, omissions are carefully marked, and names or allusions in the text are identified or explained. There is a good reproduction of the Saint-Gaudens bust by way of frontispiece, and a full index. The date 1904 as the year of the publication of the "Sherman Letters" (page 1) is obviously a misprint for 1894.

The Catholic Encyclopedia: An International Work of Reference, on the Constitution, Doctrine, Discipline, and History of the Catholic Church. Edited by Charles G. Herbermann and others. In fifteen volumes. Vol. VI. New York: Robert Appleton Co.

The successive volumes of this great work appear with unfailing regularity. The sixth volume, as it happens, is unusually rich in important articles. It opens with an elaborate discussion of Fathers of the Church, which contains a very useful bibliography and is particularly interesting for the careful definition of the phrase as understood by Catholics. The articles on France and Germany, dealing with their history and literature, with especial reference to the influence of religion and the church, fill respectively thirty-nine and forty-four pages, and are exceedingly valuable. The account in the former article of the recent separation of Church and State in France is very instructive, and, while written from a Catholic point of view, is commendably fair and sane. The following judgment is worth quoting as representing the common Catholic opinion:

> All the evils of the situation are due to the fundamental error committed by the State at the very outset, when, wishing to reorganize the life of the church in France, it broke with the Holy See instead of opening negotiations. Hence the impossibility of the church actively coöperating in the execution of laws enacted by the civil authority in a purely one-sided fashion—laws which took the place of a concordat never regularly annulled.

The article on Gothic Architecture is also interesting, and finely illustrated. The illustrations, in fact, form a striking feature of this volume, as of all the preceding. There is an elaborate and careful treatment of Biblical Geography, and a briefer article on Geography and the Church, setting forth the services of the church in the discovery and settlement of new lands. The lives of Fénelon, the great mystic, and of St. Francis of Assisi, the most attractive of all Catholic saints, are recounted sympathetically, and in the latter case with enthusiastic appreciation. The article on Galileo strives to be fair and judicial, but there is a natural inclination to minimize the hostility of the church and to magnify the faults of the great physicist. In view, however, of the common and largely erroneous tradition of the relations between Galileo and the Catholic authorities, the writer's attitude is not altogether unjustified. There is an annoying lack of exact references in this as in some other articles. Quotations favorable to the author's contention are made from various Protestant writers with no indication of the place from which they are taken—always a reprehensible practice, and particularly so in an encyclopædia. In the article entitled "Fundamental Articles" there is a capital statement of the difference between the Catholic and Protestant, or rather between the Conservative and Liberal, attitude toward dogma. The following quotations illustrate the Catholic position:

> In the first place the theory [of Fundamental Articles] is repugnant to the nature of Christian faith as understood by the church. According to her teaching the essential note of this faith lies in the complete and unhesitating acceptance of the whole *depositum* on the ground that it is the revealed word of God. The conscious rejection of a single article of this deposit is sufficient to render a man guilty of heresy. The question is not as to the relative importance of the article in question, but solely as to whether it has been revealed by God to man. . . . The Catholic church knows of one and only one test to determine this question of membership in Christ's body. This test does not lie in the acceptance of this or that particular doctrine, but in communion with the apostolic hierarchy. . . . To sum up: the system of fundamental articles is repugnant to the religion of Christ. It is a stage in the disintegration of religion, consequent on the admission of the principle of private judgment in matters of faith; and it is a stage which is necessarily destined to lead on to the complete rejection of revealed truth.

The article on Gospel and Gospels is superficial, apologetic, and anti-critical. In the bibliography not one of the great German discussions of the subject is mentioned. The article on Gnosticism, on the other hand, while equally biassed, is much more adequate and contains an admirable bibliography, as is true of most of the articles. The article on God is genuinely scholastic in form and treatment, but it gives an excellent summary of the various traditional arguments for God's existence, Anselm's ontological argument, for instance, being correctly stated, as it seldom is. In this article there is an unfortunate slur on the Modernists: "If a concrete example be needed to show how, of logical necessity, the substance of Christianity vanishes into thin air once the agnostic principle is adopted, one has only to point the finger at Modernism." This sentence suggests, what seems to be

borne out by not a few of the articles, that the pressure of ecclesiastical authority has begun to make itself felt, and that the Encyclopædia is becoming less liberal in spirit than it was at first. This may be a mistaken impression, and it is to be hoped subsequent volumes will show it to be so; for the work is of so important a character and is bound to be so widely influential that it would be a great pity if it were anything but perfectly fair and were controlled by aught but the scholarly spirit.

Essai sur les Principes de la Métrique anglaise. I, Métrique auditive. II, Théorie générale du rythme. III, Notes de métrique expérimentale. Par Paul Verrier, Agrégé de l'Université, Docteur ès Lettres. Paris: H. Welter. Les trois volumes achetés ensemble, 30 fr.

In several ways these volumes, of which the third is still in press, are significant. They belong with the series of recent French books, noticed from time to time in these columns, which deal seriously with the best English and American authors of the last century. They give evidence also that out of the welter of conflicting notions on English metre there is slowly arising a general consensus on the fundamentals.

A great Hellenist lately remarked that no one can quite appreciate the distinctive qualities of Greek metre who has not learned to enjoy the delicate charms of French verse. The remark was just, and suggests other comparisons and contrasts. The report of a competent ancient Athenian on English versification would be immensely interesting. Since that is out of the question, perhaps the report of a competent Frenchman is the next best. The subtle and far-reaching differences between his idiom and ours, along with the underlying likeness, give a Frenchman who has mastered our speech an advantageous detachment and freedom from preconceptions. M. Verrier seems to possess these advantages. He began to publish on the subject in 1891; he has explored many avenues of approach; he asks his reader to accompany him along several of these avenues. The pace may appear rather too leisurely, but it is easy to follow.

The inadequacy of the traditional scanning being shown, Verrier next explains his own way of studying the problem. Analysis of facts, then investigation of causes—these are the two parts of all scientific method. First, all preconceptions cleared away, what is the report of the trained ear on the sound-combinations that constitute English verse? In the main its report is self-sufficient and final, though on some points experimental analysis must be called to its aid; of course, too, the ear must be competent, its training adequate. All that we can learn of the psychology of rhythm must be brought to bear. And in a complete description of English verse its historical development must be traced, it must be duly compared with the verse of other races. But life is short; of the five sections, auditive, historical, comparative, and experimental metric, with the psychology of rhythm, the second and third are omitted by Verrier; nor does he attempt any description of the vast variety of verse-forms exhibited in English. Volume I is devoted to setting forth the facts as heard, an analysis of good native rendering of English verse. This involves the analytical statement of a mass of scientific observations of ordinary English utterance, first in prose and in conversation—of the qualities of speech-sounds, syllables, phrasing, variation in stress, shifting of word-accents according to collocation, elasticity of duration. It is impossible to give in a brief notice a just idea of the wealth of details here brought together, or of the skill with which these are shown to bear on versification. Much that is popularly supposed to be "poetic license" is found to be as common in daily speech as in verse, which is, indeed, on the phonetic side, merely an artistic treatment, a comparatively slight regulation and idealization, of good talk of an elevated character, especially of an emotional nature.

In Volume II our verse is examined in the light of the general theory of rhythm. Here, too, the author is well acquainted with the best work, from ancient Greece to newest America. That he has sometimes followed the wrong authority on disputed points of Greek theory does not affect his conclusions on English. First he compares rhythm with what he chooses to call "rhythm in space." How does the eye measure equal or proportional intervals in space, and what enables the ear to measure in like manner the intervals of time that constitute rhythm? Is there any relation between the functional rhythms of the heart and of respiration, and the rhythm of art? What is the relation between the rhythms of labor and those accompanying songs of the workman that are so prominent in Bücher's well-known study? What are the relations between labor-songs and the fully developed verse-forms? These are some of the questions examined. Musical rhythm is rather fully analyzed, and the nature and office of rhyme considered, though on the latter subject there is little that is novel. Each volume is separately indexed, but scantily.

Perhaps the most important feature of Volume II is the fulness with which the fact is brought out, and its significance made clear, that in all rhythms of art, as analogously in the corresponding relations of space, we have to do with the subjective sense of rhythm, not with the actual duration of the intervals. Perfect accuracy of measurement is impossible, both for performer and for listener; perfect regularity would be intolerable if it were possible; departures from the exact pattern are both unconsciously and consciously made in obedience to the artistic sense. Joachim's "agogic accent" is one example of this, not mentioned by Verrier. Such departures are wider than one would believe without proof. But underneath all these departures the regular pattern is felt and kept in view, as an ideal not to be sought too rigorously. The reports of experimental study in Volume III will perhaps throw more light on these variations; but Verrier is well aware, though not all experimenters have been, that our mechanical methods and apparatus are not yet so perfect that we can on critical points accept their report without hesitation.

Altogether we do not know of any clearer or more convincing analysis of English verse-rhythm. Yet there is one unfortunate error, in the definition of rhythm itself. Rhythm is said to be constituted by "a perceptible division of time into sensibly equal intervals." But this makes no provision for what Verrier expressly recognizes as of great importance (I, 160), the ratio between the parts of the single foot. This is what determines the genus of the foot and of each specific rhythm, the same relation that determines the time-signature of a piece of music, as 2-4 or 3-4, etc. In many of his examples Verrier notes this relation accurately. In truth, there can be no artistic rhythm which does not in general make this relation clear. There must be not only equality of the larger intervals, the feet or bars, and a succession of equals; there must be also in the series of feet a sensibly regular relation of parts within the foot. This regular relation may be varied within limits, but it must be there, an *arrangement* of parts, a *temporum ordo inter se*, as the Latin metricists put it. What still prevents many observers from seeing that this is the case in English verse is the fact that these relations within the foot are so subtly and infinitely varied, and that what the Greeks called irrational feet are so numerous. These can be specially numerous in English without destroying the general movement, because the main ictuses are so marked by our strong word-accent. No theory that does not note this *ordo temporum inter se* can ever satisfactorily note examples like some of our familiar nursery rhymes. Two which Verrier cites together are "Little Jack Horner" and "Little Tom Tucker." Taken alone, those phrases that begin the two might have the same rhythm. But ask any child to recite each jingle as a whole, first one and then the other. Every hearer must feel a difference of movement; but for this

difference Verrier's definition makes no provision. Some expressions suggest that Verrier is uneasy on the subject; we believe he will ultimately recognize that the distinction is fundamental.

Minor errors of the press or differences of opinion are hardly worth noting, but three may be mentioned. Verrier takes the beginning of Tennyson's song, "Sweet and Low," as in even time (II, 163); surely, Barnby's well-known setting in 6-8 time is the exact musical counterpart of the poet's reading. It looks odd to see the name of "Philip Ray, the miller's only son," repeatedly printed as Roy. And Browning's "Praise God, sang Theocrite" is robbed of both rhythm and rhyme by the spelling Theocritus. But such accidents are few.

Wayside Wisdom. By E. M. Martin. New York: Longmans, Green & Co. $1.50 net.

One is a little doubtful whether to say that Mr. Martin has tapped the vein of A. C. Benson, or merely that

> Himself drank water of the wel,
> As did the knight Sir Percivel.

At any rate, he writes for "quiet people" concerned about old houses, dreams, gypsies, country hedge-rows, being in love, growing old, and death. He composes, too, in that mood of mild and pensive melancholy which expresses itself in prose free from point and paradox, simple, limpid, and musically cadenced. Although he speaks without petulance or irritated self-consciousness, he is pretty much out of sympathy with the turbulent main currents of these days. With George Eliot, he "laments the death of leisure, a death that has affected the world more deeply than any other since the sun was darkened over the hill of Calvary." He regrets the lost art of tender recollection, the lost power of tranquil emotion, the lost delight in solitude. Like many other people of old-fashioned affections, he feels that some of the most important realities become invisible or seem insubstantial in the garish light of the modern scientific day. He puts his faith in common men, fishermen, and peasants, who have kept their faith in the supernatural, and who know the joy in common things. The pilgrim with staff in one hand and book in the other, stamped in gold on the cover of these essays, is plainly going back to nature, as in eighteenth-century England, before the romantic movement became involved with a political gospel, the scholarly dons of Cambridge and Oxford went back on short excursions to kick their feet through the dewy grass of country lanes, dreaming of the golden age of pastoral poetry, and ruminating on the superiority of the lark to Locke "On the Human Understanding." Mr. Martin's pilgrim, though he has many Bensonian characteristics, is not without his own distinctions of style and temperament; but, like the poetry of the Wartons and their friends, his wisdom is perhaps mainly interesting as a symptom and a protest against the dry rationalism of the latest age of enlightenment.

Richard Jefferies: His Life and Work. By Edward Thomas. Boston: Little, Brown & Co. $3 net.

A Jefferies cult has been in the air, so to speak, for some time, waiting to be precipitated by some literary wind. His admirers have been heartening one another in secret, and waiting for an opportunity to make their sally on the world. At last comes Mr. Thomas, with this solid book, composed of a small amount of biography, a large amount of quotation from Jefferies's works, and long draughts of enthusiastic encomium. He brings to his task a full knowledge of his subject, both of the man who wandered and dreamed on the Wiltshire Downs, and of the land itself. He is able to enlighten a rational curiosity about an author still more talked of than read; it is a pity that, by emphasizing the pseudo-prophetic side of Jefferies, he presents a second-rate writer as a subject for worship rather than for sensible enjoyment. It is likely enough that Jefferies may some day be lifted into a cult to supplant Meredith, who supplanted Browning, who supplanted, etc.; but this attempt is certainly premature. Meanwhile, it is not doing him a service to quote with evident commendation the wilder extravagances of that rhapsodical autobiography which he called, "The Story of My Heart." "I see now," says Jefferies, speaking of his youthful reveries on the Downs, "that what I labored for was soul-life, more soul-nature, to be exalted, to be full of soul-learning." The ordinary processes of thought were inadequate to the swelling brain of this farm lad, and he, in retrospect at least, yearned for a brand new process which he calls "soul-thought." Neither was God high enough. While he lay on the earth and fingered the grass and the dust, he prayed that he "might touch to the unutterable existence infinitely higher than deity." Mr. Thomas does not seem to see the hectic provincialism of this sort of talk; that, like wild dreams on an empty stomach, it sprang from lack of intellectual nurture. To him this language is the mark of a prophet, of one who "fought in the dim, far-off, wavering van, of which we have yet no sure tidings."

The simple fact is that Jefferies was a man of morbid sensitiveness brought up in dull surroundings, which exasperated his nerves and starved his mind. The story of his life on the farm, as journalist in a small town, and as struggling author in the suburbs of London is in a way pitiful, even without the tragedy of his broken health and painful death. So many hopes were frustrated; so many ambitions were marred; so much talent was distorted to shrill clamor. Talent there undoubtedly was, and when he was content to range in his own sphere, he could write with rare beauty and even penetration. His novel "Amaryllis at the Fair" just misses, by its lack of form, being one of the finest idyls in English; some of his purely descriptive essays show a rare love of nature and a beautiful intimacy with her moods. One is struck, in a writer given at times to such self-tortured introspection, by the sanity and largeness of his better work. When most himself, he knows, as Thoreau and Wordsworth knew, that nature has no meaning when she disturbs, but only when she calms. If Mr. Thomas had, to his sympathetic life of Jefferies, added a critical discrimination between what was false and true in the man's outlook, he would have performed a useful service to letters. As it is, he has merely confounded the confusion already created by Walter Besant. It may or may not be to the advantage of Jefferies that this critical biography quotes so extensively from the author's works, both good and bad, as almost to make the purchase of the works themselves unnecessary.

Notes.

The index of the *Nation*, July 1 to December 31, will be printed with the issue of January 6.

Early in the new year Longmans, Green, & Co. will publish, in two volumes, a "History of the Irish Parliamentary Party from 1870 to 1890"—the period of Butt and Parnell. The author is F. Hugh O'Donnell, M.A., sometime member of Parliament.

Blaickie & Son, the Scottish publishers, celebrated on December 10 the centenary of their establishment.

The playwright Hauptmann's first novel, "Emanuel Quint," is to be published at an early date.

A selection of Praed's poems has just appeared in a special Riverside edition (see the *Nation*, December 23), and now comes another selection, edited by A. D. Godley, in the Oxford Library of Prose and Poetry (Henry Frowde). For the price this later book, like all the volumes of the series, is surprisingly well made and printed, but it has not, of course, the beauty of paper and type of its more costly predecessor. Mr. Godley has disinterred from periodicals one or two pieces which were not included in the standard two-volume edition of Praed's poems, and one piece, "One More Quadrille," which has never before been printed. It does not seem to us that the collection is benefited by those stray accessions. Otherwise, Mr. Godley's selection is good.

Ladies of defective early education who now desire to dedicate their leisure to intellectual pursuits will find in Temple Scott's "The Pleasure of Reading" (Mitchell Kennerley) just about what they want. The

book is neatly bound, very well printed, and it opens in an easy and ingratiating way. Mr. Scott's introductory defence of reading in general is a chivalrous and entirely unimpeachable performance. In spite of certain differences in style, it frequently reminds one of "Sesame and Lilies." His commendation, in subsequent chapters, of the Bible, of poetry, of Shakespeare, of novels, and of history and biography seems to us eminently sound; as he justly points out, there is good stuff in all these departments. His appended lists for reading and study contain, it is a pleasure to note, standard works of all sorts. In fact, nearly every book that he mentions might well be read by the best people everywhere. When parts of a writer's output have been of doubtful propriety—Byron's, for example—he refers merely to a volume of selections. It is impossible to see how any harm can come from such a book.

Henry Holt & Co. have included Samuel Johnson in their "English Readings," and have wisely secured Dr. Charles G. Osgood of Princeton to edit the selections. Dr. Osgood's introduction is a significant estimate of Johnson, worthy of being printed as a separate essay. As an antidote to the familiar caricature by Macaulay, it might well receive attention from a circle of readers wider than that of the university classrooms for which it is primarily designed. It is sympathetic in the best sense of the word, for the editor is at considerable pains to support his sentiments respecting the life and personality of Johnson by a constant appeal to specific events and utterances. If there is a fault, it is a generous one, and lies in a too frequent tone of warning against traditional prejudices which, thanks to Carlyle and others, we often bring to the reading of Boswell's "Life." The Notes are rather learned, at times, for undergraduates, but nearly always interesting.

The Elm Tree Press (Woodstock, Vt.) announces a set of publications called The Librarian's Series, to be edited by John Cotton Dana, of the Public Library at Newark, N. J., and Henry W. Kent, of the Metropolitan Museum of Art. If a sufficient number of subscriptions is secured, six books will be published, the edition being limited to one thousand copies, and five dollars being the subscription price of the entire series. They will be printed in ten and twelve-point Cheltenham type, and bound in boards. The books chosen for issuance are: (1) "The Old Librarian's Almanack," a pamphlet published in New Haven, Conn., in 1773. This is the first reprinting. (2) "The Rev. John Sharpe and his Proposal for a Publick Library at New York," by Austin Baxter Keep (1713). (3) "The Librarian": being selections from the articles contributed to the Boston *Evening Transcript* under that heading during the last three years, by Edmund Lester Pearson, editor of volume one. (4) "Some of the Best Books on the History and Administration of Libraries Published Prior to 1800: An Annotated List," compiled by Beatrice Winser, of the Newark Library. (5) "The Hoax Concerning the Burning of the Alexandrian Library," by Joseph Octave Delepierre, London, 1860-61. Translated and annotated by George Parker Winship of the John Carter Brown Library, Providence, R. I. (6) "The Early History of Libraries," by Karl Dziatzko, being a translation by Edward Harmon Virgin, librarian of the General Theological Seminary, of an article in Pauly's "Encyclopædia of Classical Antiquities."

The first of the publications in this Librarian's Series has already reached us, and is an altogether satisfactory reprint. Within and without, the little book is one to give pleasure. Republication is, besides, the only means of passing on to a thousand of us a book which is now very scarce; only two copies of "The Old Librarian's Almanack" are known to exist. But, apart from the adventitious value of the pamphlet, it has a value of its own for every lover of curious literature. The humor of its pages is all the better for the difficulty one finds in deciding, now and again, whether it be intended. How delicious is such a passing phrase as this:

> Mr. Pope (an able poet, tho a Papist) warns us that
> "A little learning," etc.

The "Almanack" is signed on the title-page by Φιλόβιβλος, but there seems to be little doubt that its composer was one Jared Bean, born in New Haven in 1705 or 1706, and, from about 1754, curator of the Connecticut Society of Antiquarians. He is mentioned in the "Literary and Genealogical Annals of Connecticut" of Sarah Gilman Bigelow, and seems to have died about 1788. The old librarian never accepted the American Revolution, toasting King George to the end. A hint of his loyalism is contained in his "Almanack," dating from 1773. The wisdom of Pope's advice about drinking deep if at all is, he suggests, "seen now-a-days, when Demagogues and others of shallow intellect seek to stir up sedition & revolt." There are many pages which cry out for citation. Specially eloquent are his expressions of scorn for the "Biblioklept or Thief of Books." One would, too, much like to quote his passage upon "the Enemies of Books," "especially . . . the Cockroach." Jared Bean believed most earnestly in excluding from shelf privileges "any mere Trifler," or "Person that would Dally with Books." The young person and the female are specified as "undesirable citizens" of the library. "Be suspicious of women," counsels Philobiblos:

> They are given to the reading of frivolous Romances, and at all events, their presence in a Library adds little to (if it does not, indeed, detract from) that aspect of Gravity, Seriousness, and Learning which is its greatest Glory. You will make no error in excluding them altogether.

"The Old Librarian's Almanack" concludes with "A Sure and certain cure for the Bite of a Rattlesnake, Made Publicke by Abel Puffer of Stoughton."

However much one may wish that the author had been more familiar with tropical Spanish-America before making his short trip across Guatemala, there are too few works in English on that interesting country for one not to welcome Nevin O. Winter's well-printed little hand-book with its fifty excellent illustrations (Boston: L. C. Page & Co.). In the book, which he calls "Guatemala and Her People of To-day," he has added to his own minute travel notes a careful compilation from the ordinary sources of information, and has made easy the way of the stay-at-home traveller. Although inclined to look at matters political in the best possible light, the author is frank enough to admit that "there has never been a real President" in Guatemala. "Each one has been a practical dictator and made the attempt, at least, to run everything in his own way." To emphasize this, there is stamped on the cover Guatemala's significant coat-of-arms: crossed bayonets and swords, partially concealed by the legend, "Libertad," and a bird of gay plumage.

Travellers in Rome who yield themselves to the subtle charm of the Campagna will hardly find the excellent Baedeker a sufficiently detailed guide. To them may be recommended the recently published volume, "La Via Appia à l'époque romaine et de nos jours," by Sig. I. Ripostelli and Prof. Orazio Marucchi, of whom the latter at any rate needs no introduction (Rome: Desclée). The work is divided into two parts, the first, by Ripostelli, describing the Pagan memorials; the second, by Marucchi, the Christian. The traveller is conducted by these efficient *ciceroni* from the beginning of the "Queen of Roads," at the Porta Capena in the vanished Servian Wall, as far as the sixth milestone, thus traversing the most interesting part of the highway. The information given is much more accurate than that usually put before the inexperienced visitor to Rome, and the book is very richly illustrated with views from photographs, old engravings, and architectural restorations. In numerous instances a view of the existent remains is confronted on the opposite page with its proper "restoration"; and though the specialist will look askance at many of these achievements of a vivid imagination, they cannot harm substantially the tourist, who needs a tolerably strong stimulus for the quickening of his historical vision. He may even be led by such means to the reading of the more strictly scientific works by Ashby and Tomassetti, the latter of whom has just begun the publication of "La Campagna Romana, Antica, Medioevale, Moderna" (Rome: Loescher), which bids fair to be his *magnum opus*.

H. Festing Jones, the author of "Diversions in Sicily" (Scribner), is one of those lucky travellers who not only finds friends everywhere, but makes them interesting to others. His tall fellows are of all sorts—lottery playing coastguards, innkeepers, a woebegone professor afflicted with the evil eye, actors, and above all the managers of puppet shows. In fact, the book is largely given up to the puppet stage, which the author saw from behind the scenes. He learned something of the year-long performances of Charlemagne and the twelve Peers, not to mention their numerous progeny. On the night when a favorite hero, Guido Santo, was to die, he found the theatre nearly empty. The kindly Sicilians could not abide the pitiful spectacle. The marionettes have been many times described, but rarely with such insight and humor. At Mount Eryx Mr. Jones saw the solemn descent of the Miraculous Madonna by St. Luke from her mountain home to the plain. In honor of the event, the Universal Deluge in seven episodes, from the dalliance of the angels with the daughters of men to the bow of promise, was represented on as many cars—a mediæval ceremony most spiritedly described. At Calatafimi the Arts (handicrafts) gave the Parable of the Prodigal Son in twenty-nine groups, not omitting the allegorical interpretation. Here, the town being poor, the groups advanced on foot from point to point. In the course of a

discussion in police barracks concerning faith and superstition the following story was told of a village near Girgenti whose patron, St. Calogero, is frequently besought for rain. If he delays to send it the peasants threaten him with the alternative—"The cord or rain":

If he is still obdurate, they assume that he has chosen the first, put the threat into execution, take down S. Calogero, tie a cord about his neck, and reverently cast him into the sea, where they leave him until it does rain. . . . Then they pull the poor saint out of the water, dry him, give him a fresh coat of paint, and carry him back to his place in the church with a brass band and thanksgiving—another form of the recurrent death and resurrection of the god, imitating sunset and sunrise.

For stay-at-homes there is a shade too much untranslated Italian in a delightful book which those who know their Sicily even superficially will find pure gold.

Sir Horace Rumbold's "Francis Joseph and His Times" (D. Appleton & Co.) offers an extremely pleasant blending of the memoir and the formal history. It has the light touch, the leisure, the intimacy of the one and the ordered, comprehensive forward movement of the other. The lives of great men, as told in connection with their age, are not very often what they set out to be; the figure is either lost in the background or else conceals it. In the present instance we find the proportions perfect. Without pretending to the rôle of an original historian, the author has given us a correct and intelligible outline of the last 120 years of Austrian history. Without assuming the tricks of the professional word-painter he has drawn a vivid, sympathetic, and just portrait of the most historic figure among men of our time. Next year the Emperor Francis Joseph will have completed the eightieth year of his life, and his sixty-second on the throne of the Hapsburgs. The story of that career has often been told. Sir Horace Rumbold's experience as ambassador to the Austrian Emperor enables him to retell it with an air of unassuming authority and a sureness of touch that we remember in no other book on the subject. The writer's natural partiality towards his subject is modified by the diplomatic temper. What he has not got is the traditional obscurity of the diplomatic vernacular. If absolute clearness and ease are the marks of perfect style, our author has that style.

Miss Lucy M. J. Garnett's "Home Life in Turkey" (The Macmillan Company) is a well-timed contribution to our knowledge of present Ottoman conditions. While a good deal that she gives is not new, her minute details are interesting and her statements may be relied on as accurate. She is, to be sure, decidedly in sympathy with the people she describes, but her sympathy rarely, if ever, warps her judgment. Possibly she gives too favorable an account of the harem life (a point treated also in her previous work, "The Women and Folklore of Turkey"), but in any case her report, which rests on her personal observation, will serve to correct the view, very common, that this life is inevitably one of intellectual and moral apathy or stagnation. Not a few women, she points out, have been eminent in literature, and women, as is well known, took an active part in the revolution of last year. To many readers her description of the educational and general intellectual progress of the Turks, especially within the last fifty years, will be new. The fact is that a considerable circle of men and women in Constantinople interests itself in modern Christian, especially French, literature; it is true, however, that the Turks have hitherto shown little literary creative power. Miss Garnett's account of the existing schools (which are mostly attached to the mosques and confined to Koran-study), and of the new ones in operation or proposed (military and technical) is worthy of special attention. As to the success of the new government, she thinks it too soon to hazard a judgment. She none the less agrees with Mr. Stuart-Glennie's opinion, expressed in 1879, that the future of the Osmanli Turks will of necessity move toward the abandonment of European territory and a consolidation in their old home in Western Asia, with an empire extending from the Caucasus and the Caspian Sea to the Persian Gulf and the Indian Ocean.

Among the numerous recent books within the field of transportation, one which contains an interesting if visionary scheme, is "An American Transportation System," by George A. Rankin (G. P. Putnam's Sons). The writer assumes most properly that the transportation facilities of this country should be such as to combine the maximum of efficiency, safety, economy, and impartiality to all concerned. These prime requisites cannot be attained, it is argued, so long as our railways are subject to the conflicting regulations of Congress and of a multitude of State Legislatures. The author accordingly presents his theory for the betterment of existing conditions. This involves, in brief, an amendment to the Federal Constitution by which the individual states would surrender to Congress their present jurisdiction over intrastate commerce; the consolidation of the more important rail and water transportation companies into one large corporation, and the replacement of the numerous railway commissions by a court possessed of the authority to enforce the rules of the corporation.

The rapid progress of the modern science of accounting has been marked by the recent appearance of several books dealing with the general aspects of the subject as well as with the more intricate problems in bookkeeping which have resulted from the wide expansion of corporate enterprises. A valuable addition to the literature within this field has been made by E. E. Garrison in his little volume "Accounting Every Business Man Should Know" (Doubleday, Page & Co.). The writer has had wide experience in handling the problems of which he treats; his work has not been confined to a single business, but has extended to a diversity of enterprises, among which are banking, mining, transportation, and the wholesale hardware trade. Consequently, he is well calculated to speak with authority. Beginning with the most elementary transactions and with the most fundamental principles, he proceeds to discuss, among other topics, the complicated ledger system, valuation and reserves, department costs, and the devising of accounting systems to suit the peculiar characteristics of particular businesses. He turns aside from his main theme occasionally in such a way as to impress the reader with the indispensability of the expert accountant. Thus, for example, he declares that to the average investor the services of an able, professional accountant are even more important than those of a lawyer. He urges that the responsibility of boards of directors could be materially increased by having on each board an expert in accounts to serve as the chairman of an auditing committee whose other members were directors. On the whole, the various chapters are concise and to the point.

The five thousand franc prize of the Académie Goncourt is awarded this year to the brothers Marius and Ary Leblond, for their novel of French colonial life, "En France."

In the series, Pages Choisies des Grands Ecrivains (Paris: Colin), has just appeared "Pages Choisies de George Eliot," with an introduction and notes by H. Hovalaque.

Through the initiative of the Société pour l'Etude des Langues et Littératures modernes, a French translation of Chaucer's "Canterbury Tales" has been published by the *Revue Germanique* of Paris. The French Academy, after "crowning" the first part of the translation, now awards to the translator a considerable part of the Prix Langlois.

"Les premiers Interprêtes de la pensée américaine" is the title of a new book by A. Schalck de la Faverie, in which is described the peopling of the North American Continent, and the moral and intellectual evolution of America. Chapters are devoted to Cotton Mather, to Washington Irving, Franklin, Longfellow, Emerson, and other writers. This volume is issued contemporancously with a translation of Emerson's "Conduct of Life," by Mlle. Dugard, the author of a well documented biography of the Concord sage (Armand Colin).

On January 3 certain letters exchanged by Alfred de Musset and a lady unnamed will be opened, at the Bibliothèque Nationale (Paris), and their nature will no doubt be made known to the inquisitive. Jules Troubat is responsible for the preservation of the correspondence, which was to have been destroyed at Musset's death, but was saved on condition that the identity of the poet's correspondent should be concealed, and that the letters should not be published before thirty years had in due course revolved.

Anatole France has recently returned to Paris from his South American lecture tour, and it is now stated that he is engaged upon a book in the *genre* of his recent "Penguin Island," the subject of which is the fall of the angels. This work, together with his lectures on Rabelais, will probably appear early in 1910.

The newest Parisian academy is, perhaps, that "Académie des Dames," a committee of whose members, including the Comtesse de Noailles, Mme. Henri de Regnier (née Heredia), Marcelle Tinayre, Myriam Harry, Daniel Lesueur, and Lucie Delarue-Madrus, has awarded its annual prize of five thousand francs to a youthful pupil of Henri de Regnier, Edmond Jaloux, for his novel, "Le Reste est silence," the story of a child. The prize is called "le Prix de la Vie Heureuse."

In connection with the meeting of the American Historical Association in this city an exhibition of manuscripts and

books illustrative of historical writing has been opened at the Columbia University Library. The earliest and most beautiful of the illuminated manuscripts is a golden gospel loaned by J. P. Morgan. It was written on purple vellum in letters of gold about 680 A. D., and afterwards presented by Pope Leo X to Henry VIII. Later manuscripts of special importance are Arent van Corlear's Journal, 1634, which is the earliest historical MS. relating to Dutch New York, the original roll of the Concord Minute Men, the treaty between the United Netherlands and the United States in 1782, Gibbon's autograph notes for his history of Rome, and large portions of the original manuscripts of both Hume's and Macaulay's histories of England. The printed books which form the larger part of the exhibit contain a few remarkable examples, mostly from Mr. Morgan's library. The first book printed with movable type is represented by a beautiful vellum copy of Gutenberg's Bible, about 1450. Near it are placed a Chinese book printed at least 100 years earlier, and the only perfect copy of Caxton's "Recuyell of the Histories of Troy," 1475, which is the first book printed in English. Other European items are rare German pamphlets of 1520-21, relating to Luther and the Diet of Worms, a unique copy of a broadside proclaiming the Commonwealth in England, the first Greek and Latin editions of Herodotus, and remarkable editions of Cæsar, Tacitus, Josephus, and Augustine. Relating to America are the first dated edition of Columbus's letter, 1492, rare copies of Vespucci, De Bry, Purchas, etc., the first view of New York in Van der Donck's Beschrijvinghe, 1651, the first New York directory, and the first United States census.

Arthur Gilman, author and educator, died at Atlantic City, N. J., December 28, aged seventy-two years. He established in 1877 at Cambridge, Mass., the Society for the Collegiate Instruction of Women, familiarly known as the Harvard Annex, which was later created Radcliffe College. The greater number of his writings were of an historical nature.

Science.

The Survival of Man. By Sir Oliver Lodge. New York: Moffat, Yard & Co. $2 net.

Eusapia Palladino and Her Phenomena. By Hereward Carrington. New York: B. W. Dodge & Co. $2 net.

To judge by the number of volumes on "spiritism" put forth by the publishers, such books must vie with the successful novel as "best sellers." Men of science have not, as a rule, felt that they could afford the time and labor required to study phenomena which, confessedly, are not susceptible to their careful laboratory tests, and which relate to processes often connected with deliberate fraud or innocent misrepresentation. For this very reason, Sir Oliver Lodge's apologetic is not without exceptional interest; although, in giving his excuse for leaving the field of effort in which his brother scientists feel that his talents might be of greatest service to the world, he tends to confirm the view of his fraternal critics.

His book contains nothing new; but apparently aims to present a collection of the most strikingly convincing examples of the phenomena considered, and to suggest what seems to the writer to be the most reasonable hypotheses available for their explanation. Here, indeed, he gives evidence of candor and judgment quite compatible with his reputation as a scientist. The logically minded investigator, however, looks with disfavor upon the multiplication of hypotheses to account for unexplained phenomena. The hypotheses suggested by the "spiritists" imply that we have gained adequate conceptions of the meaning of life, of individual human existence, of persistence in time, of the spirit as distinguished from the mind, of the processes involved in the manifestation of mental existence through physical activities, and of many kindred subjects, none of which are thoroughly comprehended and all of which are under investigation by earnest students. The man of science will not be satisfied to entertain the hypotheses here presented until these investigations have been satisfactorily advanced, nor then unless the facts leading to these hypotheses seem unrelated to any phenomena already explicable, as is surely not the case. That the phenomena described are, in the present stage of our knowledge, mysterious, is, of course, to be granted; to argue from this that they are to be explained in terms foreign to such scientific conceptions as have already been attained is as unwarranted as it would be to look for some non-physical hypothesis to explain, for instance, the still mysterious nature of electricity.

The value of this type of research must therefore depend almost altogether on the character of the evidence and here the book does not appear convincing. When we consider the facts as a whole, as thus described in epitome by one who is best fitted to present them cogently, we can only be impressed with a sense of doubt as to the reliability of the record. The class of people in whom the phenomena are displayed are so emotional, so crudely uncritical, that one can but distrust their statements of the facts even when one does not question their honesty. As an example of "spontaneous telepathy," for instance, Sir Oliver gives prominence (pp. 139 to 144) to a detailed description of a dream by a certain attorney residing in St. Paul, Minn., in 1892—one Harry W. Wack. The name is unusual, and we assume that the dreamer whose story is given so much weight is the H. Wellington Wack (see "Who's Who in America"), who lived in St. Paul from 1889 to 1895, and who has since then published a book which, it is asserted, was largely plagiarized: he has recently been before the public. The discrediting of one anecdote does not, of course, discredit all similar ones; but this example shows how difficult it is to escape untrustworthy evidence in this field, especially as very little account is taken by our observers of the possible occurrence of illusions of memory, which are immensely more common in the experience of every man than is generally recognized.

Of the evidence in favor of the spiritistic hypothesis gleaned from the performances of Eusapia Palladino, Sir Oliver has nothing to say; a fact which is of no little significance when we turn to the book in which Mr. Carrington attempts to substantiate the spiritistic hypothesis by this Italian medium. In fact, this particular medium seems to stand apart from others of her type only because a number of professors, and doctors medical and other, of more or less eminence are numbered with those who have given attention to her accomplishments; among whom we may mention Lombroso, Richet, and Sir Oliver Lodge himself. These important witnesses in general agree that Palladino has been detected in fraud, but they all also concur in the opinion that there are certain manifestations during Palladino's *séances* that seem inconsistent with the physical concepts approved in our day, and that are inexplicable under any well established scientific hypotheses. It is unnecessary to describe these manifestations in detail for they differ little from those given in *séances* with other less well known mediums. There is the same insistence upon dim lighting, which, at the demand of the medium, is reduced in intensity *pari passu* with the strangeness of the occurrences. There is the same black curtained cabinet. Tables are moved, rappings give replies to questions, light articles are thrown around, the observers feel mysterious touches, slaps, etc., etc., as of old. Certain of the phenomena noted are, indeed, new to the world of mediums, but few of these are of especial interest.

The natural inference would be that Palladino's manifestations must be classed with those of more commonplace mediums, who have been frequently "exposed"; yet we are assured by the well-known observers of these phenomena that we must look in some new direction for the explanation of what they have seen. It remains a question, however, whether the learning of the witnesses cited fits them for passing judgments in these matters any more authoritatively than the average citizen may venture to do; whether, indeed, it is probable that they could explain the tricks of the clever prestidigitator who pretends to be no more than a skilful de-

ceiver. We should be grateful, to be sure, to the learned company of martyrs to science who give valuable time to such wearisome business as that recorded; but, on the whole, we must confess that we remain unconvinced of the validity of Mr. Carrington's claim that the Palladino phenomena are explicable only by the adoption of the hypothesis of spiritism, and feel inclined to agree with the late Professor Sidgwick (p. 53), who, after his sittings, stated that "inasmuch as trickery had been systematically practised, apparently, by Eusapia Palladino for years, he proposed to ignore her performances in the future as those of other persons engaged in the same mischievous trade were to be ignored." Even if we do not go so far as this, we can but note that the vast mass of what were supposed a few decades ago to be spirit messages have been shown by advancing science to be due to the medium's automatisms, which are now fairly well correlated with normal psychical phenomena; and we may believe that in some future day such explanations will be forthcoming of Palladino's unfraudulent performances as will bring them into accord with well-established scientific conceptions.

Lombroso is to be honored by a statue to be erected in the city of Verona, and an international subscription for the purpose is being organized.

For the next year, the Sociedad Rural Argentina announces an international exposition of agriculture, to be held at Buenos Ayres. The United States has been allotted 4,500 square metres of space, which will be chiefly devoted to the display of agricultural and industrial machinery.

The death of Dr. Ludwig Mond is announced from abroad. He was seventy years of age, and had been most successful for many years in his applications of chemistry to industrial processes. A German by birth, in 1862 he went to England and soon gained renown by his inventions connected with the obtainance of nickel and other metals. In 1896, he founded the Davy-Faraday Research Laboratory of the Royal Institution. His collection of paintings by the Italian masters has a worldwide reputation.

Drama.

"The Lily," which has just been produced in the Stuyvesant Theatre, is an emasculated version of "Le Lys," by Pierre Wolff and Gaston Leroux, which attracted considerable attention and much adverse comment in Paris, by its open and bold advocacy of the rights of free love. Like most revolutionary social dramas of its class, it based its arguments upon an imaginary case, barely possible even in France, wholly inconceivable here, where religious, legal, and social conditions are entirely different. Moreover in its discussion of the sexual problem, it ignored the vastly important economical side of it altogether. It was not, therefore, a very valuable contribution to either political or social science. But, in view of existing conditions in France—the attitude of the church toward divorce and the scope of parental authority—it had some sort of excuse for its existence. And it was a consistent and well-made drama. In New York, it has no relevancy and the only motive for its representation must be sought in its sentimental and theatrical interests, which are considerable. It is pernicious from the moral and silly from the social point of view. Here is the plot in a nutshell. A profligate, selfish, tyrannical father, a relict of the ancient feudalism, has two daughters. The elder, whom he prevented from marrying in youth, has become a subdued, spiritless, patient, saintly, old maid, whose sole happiness is to guard and cherish her much younger sister. The latter, shut out from the world in an old château, falls in love with a transient artist, and, when she finds that she cannot marry him—because he has a wife from whom he cannot get a divorce—becomes his mistress. When her fall is discovered, her father proposes to heat her first and disown her afterward, but the blameless old maid, the lily, comes to her defence, proclaims her inalienable right to obey her natural instincts and declares that any fate for woman is preferable to that of an enforced celibacy. The dramatic effect of this unexpected outburst is, of course, striking. In "The Lily" in the concluding scenes, certain concessions are made to modern prejudices, at the expense of both force and consistency, but the play is none the less unwholesome on that account. It is beautifully mounted at the Stuyvesant, and well acted, especially by Nance O'Neil, who, in the crucial scene, touched such a note of tragic pathos as is seldom heard in the theatre of to-day. The success of the piece is ensured by her personal triumph, but the representation is a good one throughout. It is a pity that the play is not more worthy of the pains bestowed upon it.

"The Next of Kin," the latest play by Charles Klein, which was produced in the Hudson Theatre on Monday evening, and of which much was expected, is a melodrama of moderate quality and unequal effect. Although it professes to deal with a subject of the gravest import—the influence of political and commercial interests upon a corrupt judiciary—it is so general in its charges, so vague in its details, so theatrical and indefinite in its final outcome, that it is inconsiderable except as melodramatic entertainment. From this point of view it is not altogether unskilful. There are many effective situations in the first two acts, and several well sketched character studies, which afford opportunity for some excellent acting. Hedwig Reicher, as the heroine, against whom a wicked uncle employs all the machinery of the law to rob her of wealth and liberty, depicts with much cleverness the progress of a harassed girl through various stages of nervous excitement to the verge of actual insanity. Frank Sheridan, as a political ex-judge, who bends judges to his will, and Frederick Perry, as an able young advocate, who suffers defeat because he will not stoop to ignoble means to secure victory, both acted extremely well. So did most of the less prominent players. They made the best of the opportunities afforded them by a practical playwright.

The "Intimate Recollections of Joseph Jefferson" (Dodd, Mead & Co.), by his daughter-in-law, Eugénie Paul Jefferson, bears pleasing testimony to the high and affectionate esteem in which the famous actor was held by his family and by a vast host of personal friends in and out of his profession. It has a definite charm as a loving and unaffected tribute to his memory, but adds little to the general knowledge of him, either as man or artist, and contains nothing that is particularly valuable, or significant, in the way of critical appreciation. In many respects it is a work of supererogation. Such facts in it as are fresh are, as a rule, either cumulative or trivial. During the last thirty or forty years of a phenomenally prosperous and happy career, Jefferson may be said to have lived in a constant blaze of publicity. His unapproachable excellence in a single character, curiously reflective of all that was superfine in his art and of the dominant traits in his own winning personality, kept him at the head of his calling and endeared him to millions of theatre-goers all over the English-speaking world. So it came to pass that his sayings and doings were chronicled in the press with a minuteness that makes it almost impossible now to tell anything about him that has not been already recorded. That he was not spoiled by the favors showered upon him by fortune is, perhaps, the most substantial proof of the solid worth of his character and the soundness of his intellect. He preserved to the end his democratic simplicity, his tender and genial humanity, his enjoyment of life, art, sport, and nature, and his spirit of habitual optimism. These recollections afford some fresh glimpses of him as the enthusiastic painter and shrewd collector, as the fond sire and grandsire, the ardent fisherman, the wide-awake man of affairs, the liberal host, and the occasional speculator in spiritual mysteries. They speak, also, proudly but discreetly, of his close friendship with Grover Cleveland and other eminent men, who found in him the virtues of true companionship. It is an agreeable book, if somewhat over-zealous in its hero-worship.

"The Travelling Companions," a story in scenes, by F. Anstey, which was originally published as a serial in *Punch* in 1891, has now been reprinted by J. M. Dent & Co. of London and imported here by E. P. Dutton & Co. It is not a very brilliant specimen of the author's humor, and shows the marks of age very clearly, the conditions of European travel having changed greatly since it was first written. The sketches of the tourists concerned do not reveal much power of observation or invention, the English personages being conventional and the American grotesque. It is mildly amusing in its way, and, in the absence of more substantial wit, might serve to while away a lazy half-hour, but the reason for its resuscitation is not particularly obvious.

Meta Illing died December 26 at Frankfort-on-Main. This actress had appeared in many emotional parts at the Lessing Theater in Berlin, the Thalia Theater in Hamburg, and the Schauspielhaus in Munich, of each of which she was a member, and at many other theatres in Germany and Austria. In 1906 she appeared at the Berkeley Lyceum in New York, in "Magda," in English. Before this she had

played in the West as a German star. During the present season in Berlin she organized a company for the performance of Shakespearean and other plays, including "She Stoops to Conquer," in English.

From Gross Lichterfelde is announced the death of the dramatist and novelist, Karl Böttcher, in his fifty-eighth year. This writer's plays, dealing frequently with mooted social and political questions, more than once were banned by the censor. Apart from books of travel, his works include "Der Nabob auf Kapri," "Karlsbader Novellen," "Die berühmte Tragödin," "Im Bann der Engländerei."

Music.

The oldest of all the operas that have kept their place in the regular repertories is Mozart's "Le Nozze di Figaro." There is one, however, twenty-three years older still, which is occasionally revived—Gluck's "Orfeo ed Eurydice." Its production last week was one of the most notable achievements ever placed on record at the Metropolitan Opera House. There are no men in the cast; Louise Homer, Johanna Gadski, Bella Alten, and Alma Gluck (a recent recruit from the chorus, who bids fair to become a famous prima donna) impersonated the four rôles in the cast; and Mme. Homer, on whom fell most of the burdens, raised her stature as an artist by several inches. Arturo Toscanini, who conducted with the utmost devotion and enthusiasm, had chosen for this revival neither the original Italian version of "Orfeo," which was first heard in Vienna in 1762, nor the Parisian, which was produced twelve years later; but, profiting by the suggestions of Berlioz and Gevaert, he eliminated weak numbers and strengthened other places. In other words, he followed the example of Wagner, who believed that it was better to edit Gluck's operas and save them than to leave them on the shelf, respectfully unedited. The Metropolitan audience applauded the opera so cordially that there is hope of its becoming again a favorite—a fate it deserves because of its abundance of good melody. The beautiful scenery provided by Mr. Gatti-Casazza will help to rescue "Orfeo." It is exquisitely in harmony with the poetic conceptions of the infernal and paradisiac realms in which the story of Orpheus in quest of his wife is located.

"The Essentials of Pianoforte Playing," by Clayton Johns (Oliver Ditson Co.), is a convenient summary, in 84 pages, of the things a student of the piano and its literature most needs to know. It is not intended for beginners, but for those who have already acquired facility in reading easy music; and there is much, too, that will help teachers who have not the opportunity to keep in touch with the latest developments in musical pedagogy. Mind-training, as well as finger-training, is what the author aims at; and in pursuance of this object a number of famous short pieces by Clementi, Bach, Schumann, Chopin, and other masters are printed, with analyses and directions for their correct rendering. The chapters How to Practice and Punctuation or Phrasing are to be specially commended, while in the section entitled "A comparison between instrumental music and verse" there is much food for thought for those who make all accents metrical, forgetting that notes, like words and syllables, have special emphasis according to their value and position. It is somewhat disconcerting, on the other hand, to find the statement that, as a rule, "accelerando in one place demands ritardando in another." Why, in music any more than in the recitation of verse?

To say that music is "the science of harmonical sounds" is to give a poor definition of it, for music is an art as well as a science, and much of it consists of melodies that do not include "harmonical sounds." It would be unfair, however, to condemn M. F. MacConnell's "Some Essentials in Musical Definitions for Music Students" (Oliver Ditson Co.) because of this opening definition. For the most part, the terms that an amateur or a student needs to know about are clearly defined and helpfully illustrated in this book, which aims at being something more complete than the average musical catechism, but less elaborate than the usual dictionaries of terms. The chief advantage of the plan here pursued is that the various words relating to rhythm, melody, sharps and flats, scales, keys, time, accent, embellishments, form, opera, etc., are brought together instead of being scattered throughout the volume. There is an appendix of noted names in music, brought up to the present day. It is altogether a very useful little book.

One of the new operas at the Paris Opéra Comique, the "Cœur du moulin" of Déodat de Séverac ("poème lyrique en deux actes, paroles de M. Maurice Magre"), is described as expressing most exquisitely the *genius loci*, which happens to be Languedoc. A peasant lover returns to his own country to find his sweetheart married to another. They meet, and the sweetheart once again returns the passion of her lover. They plan to flee together—but the "voices of the village" speak to him, and, in the end, he departs alone. The piece is one of poetical merit, and has unusual spontaneity. There is to be recognized, also, richness of melodic invention. Furthermore, the piece is mounted with fidelity and richness. It may none the less be doubted whether "le Cœur du moulin" is a piece which we are likely to see transplanted. The thinness of its action would seem a sufficient obstacle. With M. de Séverac's opera is given a *conte musical* in two acts, by Ernest Garnier, entitled "Myrtil."

Many operas have been written on the subject of Faust. It has remained for a Dutch composer, named Brüggemann, to conceive and carry out the plan of writing a "Faust" trilogy. His three operas are entitled "Dr. Faust," "Margarete," and "Mephistopheles." The second of these is to be produced at the Scala in Milan ere long. It is said to resemble in plot Gounod's popular work.

The Berlin *Signale für die Musikalische Welt* announces the result of the competition for prizes offered by it last May. Altogether, 874 compositions were received, and the judges (Busoni, Hollaender, P. Scharwenka) gave the first prize of 500 marks to Emile R. Blanchet of Lausanne. "Hitherto absolutely unknown in Germany," writes the editor, "he will soon be famous, thanks to his prize composition, 'Tema con Variazioni,' and the *Signale* has reason to be proud of having practically discovered this composer." The second prize (400 marks) was won by a young American, L. T. Grünberg, who has been in Berlin several years and begun to make a name for himself as a pianist. The third went to Willy Renner of Frankfurt, for a fugue. Altogether, eight prizes were awarded to men, two to women.

Albert Niemann, who impersonated "Tannhäuser" at Paris during the three stormy performances of Wagner's opera in 1861, recently sang the "Reiterlied" in "Wallenstein's Camp," at the celebration of the 150th anniversary of the birth of Schiller, at the Schauspielhaus, Berlin. He is in his seventy-ninth year.

Art.

Scottish Paintings, Past and Present. By James L. Caw. New York: Frederick A. Stokes Co. $8 net.

In this work Mr. Caw, director of the National Gallery of Scotland, has had a two-faced task. In the century and a half before Raeburn is reached, although something is to be said for the cosmopolitan Allan Ramsay, the work is one of painstaking antiquarianism. As such it gives a favorable impression. Except as a few additional pictures by the older worthies may turn up, it is not likely that the early chapters of this history will be superseded. From Raeburn on, while retaining its historical tinge, the book becomes perforce one of criticism. It concludes with such living young lions as Stuart Park and Muirhead Bone.

Nor has Mr. Caw flinched from the almost impossible duty of unifying his studies in a final comprehensive essay. Of his somewhat discrepant tasks he has acquitted himself with ability. Naturally the appeal of the antiquarian portions is small here, but American readers will welcome the discussion of Raeburn, of Wilkie, and of the Glasgow School. Some of Mr. Caw's verdicts seem adjusted to Caledonian latitudes, but in the main his standards are European. At times he presses doubtful points of priority with patriotic intent. Thus Gavin Hamilton, who managed to be a fledgling pseudo-classic as early as 1770, is called a precursor of David. The precursor of both, oddly enough, was a talented young eclectic named Fragonard. William Allan, a temperamental affinity of the later Delacroix, was exhibiting Oriental subjects as early as 1814. His position as a precursor of the Orientalists seems secure.

The most important chapters are naturally those on Raeburn and Wilkie, the only two Scottish painters who seem to have achieved anything like greatness on the European scale. A welcome addition to the biography of Raeburn is the fact that he began his

studies with the etcher Deuchar, an imitator of the Dutch masters. This may partly account for Raeburn's mysterious assimilation of what seems best in the manners of the earlier Dutch portrait painters. Though highly enthusiastic, the estimate of Raeburn is also cautious. In serene certainty of point of view, as in simple directness of touch, he is far nearer the great masters than any of the English painters save Hogarth. Wilkie, again, has no rival in Great Britain except the creator of Marriage à la Mode. In fact, Hogarth, whom Mr. Caw prudently keeps pretty far in the background, may well serve as the measure of all British achievement in painting. What is written about the still oscillating vogue of the Glasgow painters is both sympathetic and judicious. Mr. Caw, while fully appreciating the painter-like qualities of Hornel, Melville, Roche, Walton, Lavery, George Henry, Mackie, Lorimer, Austen Brown, and others, does not hesitate to note the lack of culture that limits the effect of all this work. One feels, indeed, on surer ground with the etchers, William Strang, D. Y. Cameron, who is also a painter of parts, and Muirhead Bone. All Mr. Caw's comment on recent and living painters is as searching as kindly. To the average reader it will be the most interesting part of the book.

In summing up, the permanent characteristics of Scottish art are said to be limited intellectual range—portraiture, landscape, and *genre* alone are seriously cultivated—a keen sense for workmanship, and, in particular, a love of color. Mr. Caw suggestively draws the analogies between recent Scotch and Dutch painting, and emphasizes the real points of difference with the English school. The art societies, ephemeral and permanent, and the museums are duly recorded. The volume is a stout quarto well printed and indexed, and contains seventy-six half-tone plates.

"The English House," by W. Shaw Sparrow (John Lane Co.) is primarily an historical essay in the popular style. Keenly alert to the social aspects of his subject, the author seeks novel and striking illustrations. A charcoal burner's hut takes us back to neolithic man; the peasant cottage recalls in miniature that communal life in hall which all classes led till late in the Middle Ages. Through the boldly printed text are scattered illustrations of typical homes, many of which, alas, have disappeared before the jerry-builder or, less pardonably, before the innovating architect. With Mr. Sparrow's plea for sound-proof walls every one might sympathize. It seems a case, indeed, for legal compulsion. Especially good, also, is the advice to stake out floor plans at full scale before accepting them. What is written about the relations of client and architect is sound. The ascendency of the architect must in the nature of the case rest upon persuasion. For an artist this is a hard law, but, at bottom, it is that of all professional practice that touches obvious utilities. Concerning the battle of the styles, Mr. Sparrow holds severe views, if genially expressed. There is no hope, he holds, in the prevailing eclecticism. How to stop it he naturally does not know, but he wishes that everybody would continue one or another of the English transitional styles—Tudor, Elizabethan, or Queen Anne—choosing those phases in which the Gothic residuum is most prominent. It may be interesting to note our own tendency to solve the problem along parallel lines. Our tendency is towards later composite styles, in which the classic element is the ruling one—Georgian and Louis XVI. In the absence of Gothic examples such a course seems logical. We doubt the possibility of the revival of Gothic style for monumental buildings. For domestic purposes its later forms seem still adapted. The difficulty is that few are willing to pay for sincerity of construction, whether in half timber or in stone and brick. Towards the classical revivals in England Mr. Sparrow is frankly hostile. It seems to us that he is hardly fair towards that very exquisite designer Wren. Adam, too, though his quality was small, was something more than a decorator. On the whole matter of the classical revival it must be admitted that many of its monuments are stupid and that most are wofully small in effect, but the Neo-Gothic buildings are if anything worse. Wisdom seems, as usual, to lie between the extreme courses. The Roman, including the Romanesque and Byzantine, evidently has its constructive lessons for us. More immediately useful seem the styles of Italy and France in their prime. The better modern buildings of Renaissance inspiration at least have scale and idiom. But we cannot pursue this issue. Mr. Sparrow's vivacious book is calculated for Englishmen, but all students of domestic architecture may read it with profit.

"A Handbook of Marks on Pottery and Porcelain," by W. Burton and R. L. Hobson (Macmillan), is a thin volume with rounded corners intended for the collector's pocket. It contains twenty-three registers of marks arranged by nations, kilns, and dates. Each section is preceded by a brief technical introduction, and there are four indexes, including names (except Oriental), letters or monograms, symbols, and Oriental names. Only continued use can prove the accuracy of lists of this sort. We have now merely to note the compactness of the form and the convenience of the arrangement. The fact that experts on European and Eastern ceramics have here collaborated inspires confidence, and casual tests of the Italian and Japanese sections give a good impression of the work.

We have received the first year-book of the St. Paul Institute of Arts and Sciences. Like its Brooklyn forerunner this corporation takes the whole of human knowledge to be its province, and in the first year has attained a notable membership and has conducted numerous successful lecture courses. The city wisely came to its aid by permitting the use of school buildings for this truly educational work. The institution under the presidency of Charles W. Ames, Esq., is highly organized into many sections, covering everything from astronomy to the milliner's art. A general museum is under consideration, and the beginnings of an art gallery have been made in a few gifts of modern pictures. In all, an auspicious beginning of a great and meritorious enterprise.

In "The Art of the Metropolitan Museum" (L. C. Page & Co.) David C. Preyer begins with a brief history of the museum and statement of its aims, and closes with a list of benefactors. The nineteen intervening chapters give brief histories or technical explanations of each branch of art, with incidental mention of examples in the galleries. Of the task of writing a brief universal history apropos of a particular museum, Mr. Preyer has acquitted himself creditably. The advisability of the plan is open to question. Something in the way of a short, reasoned catalogue, after the plan of that published by the Boston Museum, would seem to us more needed. Certain sections of the present volume—for example, that in which Chinese porcelain is discussed without directing the reader specifically to a single fine piece—seem clean wasted. However, Mr. Preyer writes with enthusiasm, has the courage of his personal tastes, and has given what might be a routine book a distinct personal flavor. The shortcomings are less in substance than in style, proof-reading, and in an occasional erratic judgment. We offer certain corrections and suggestions, since the book evidently has vitality enough to carry it through successive printings. The English is energetic, but undistinguished, and at times quite slovenly. A sentence like the following is typical:

> The greatest portrait painter of the Dutch school, the one who is placed according to individual preference as the greatest master in portraiture, was Frans Hals, of whom the museum shows sufficient examples to enable us to determine him a master of masters.

No one who must deal with a subject of this magnitude is likely to pass the proof-room unscathed, but the errors in this volume exceed the tolerable mean. In the Italian and Japanese sections misprints are frequent and disfiguring. We note only those that may make trouble. "Klopas," p. 44, is not recognizable as a Greek sculptor; read Scopas. "Parmigiano," pp. 78 and 108, is not a painter, but a cheese. "Diffidente" is a curious twist for Defendente, p. 87. We should be glad to see certain exaggerations toned and omissions repaired in a second edition. That "the Romans created nothing" their portraiture and architecture remain to disprove. Gothic sculpture is grossly underestimated. No mention is made of Claux Sluter, whose realism won the admiration of Renaissance Italy. That Saint-Gaudens, the faithful student of the early Italian sculptors, "liberated us from slavish dependence on the Italian Renaissance" is a paradox we should like to see explained. We are sorry to see the unpleasing, if authentic, example of Giovanni Bellini at the Metropolitan accredited either as a representative or important picture. It was a pity to omit the exquisite portrait of a lady by Bernard Strigel. In its small way it is a worthy pendant to the early Holbein. Rousseau's Gorges d'Apremont in the Vanderbilt gallery seems to certain people the finest realistic landscape of the nineteenth century. At any rate, its quality entitles it to mention. In a new edition we wish Mr.

Preyer could persuade himself not to enhance by his authority the popularity of Cot's sentimental Tho Storm. It will be news to Englishmen that the Royal Academy has been "Ruskinized," unless, indeed, the word is a trope moaning drubbed by Ruskin. One might wish finally for a fuller recognition of the merits of Homer Martin, whose sheer pictorial gift in many opinions far surpassed that of the great *improvvisatore* Inness. In the regards here suggested we believe that a good book might be substantially improved.

Thanks to the activity and funds of the Dürerbund, a new and cheaper edition of "Ludwig Richter: Lebenserinnerungen eines deutschen Malers," designed especially as a contribution to popular education, has been issued by Max Hesse's Verlag in Leipzig. A better choice in German biography scarcely could be made, for no one who ever put brush to canvas was so in sympathy with the German masses as Ludwig Richter, famous for what he did to revive wood engraving, but more famous as the painter of humble German life. These *Erinnerungen* have been amplified by Heinrich Richter, and there is an introduction by Ferdinand Avenarius.

The late Judge Madill of Saint Louis commissioned Gifford Dyer to paint a series of forty pictures to commemorate the ruins and historical views of Greece as they now stand. Mr. Dyer has lived in the country for several years and has finished about half the set. Judge Madill gave the paintings to Washington University, and they are now hanging in one of the galleries of the City Art Museum. It is not easy to combine artistic beauty with topographical drawing; but Mr. Dyer, while giving a true representation of some monument or historic spot of Greece, has attained pictorial beauty as well as utility. He paints in thin, flat planes, each object or spot of color being outlined with a delicately drawn line of brown or black. But such is his power of creating atmosphere by exact value that his pictures are flooded with air.

A photographic apparatus has recently been invented by Dr. Carl von Arnhard of Munich, Bavaria, for the easy and exact production of copies of old manuscripts in their original form without taking them out of the books in which they may be contained. The inventor, born in Munich July 16, 1850, studied philosophy and Oriental languages in the university of his native city and also in Leipzig. He is the author of a treatise entitled "Die Wasserweihe nach dem Ritus der æthiopischen Kirche," published in the *Zeitschrift der deutschen morgenländischen Gesellschaft*, in 1887. These studies impressed him with the slow and painful process of copying old manuscripts with the pen, and led him to devise some means of avoiding it. This desirable result has been attained by a very simple photographic apparatus, which, without camera and lens, with the aid of a small electric lantern constructed for this purpose, produces a perfect copy of a page of manuscript in about half a minute. Persons particularly interested in this unique invention may obtain further particulars from Dr. Georg Hauberrisser, Dienerstrasse 19, Munich, Bavaria. It has been patented in Germany, France, England, and the United States.

Frederic Remington, painter, sculptor, and writer, died December 26 in Ridgefield, Conn. Though an Easterner, he spent much of his time in the West, living as well as depicting the life of ranchman, cowboy, and Indian. Born in 1861, he entered the Yale Art School, intending to become a painter; but his artistic career was interrupted upon his father's death, though he enjoyed unusual opportunities for travel, his wanderings extending as far south as the interior of Mexico, and as far north as Hudson Bay. His more serious work in oils dates from his thirties, and later. Early in his career, he expressed the wish to have some one carve on his tombstone, "He knew the horse." And it was in the painting of the horse that he excelled. In execution, his most notable characteristic was, perhaps, the daring use of vivid, dazzling color. In the nineties, he visited Europe, the results of these travels being expressed in A German Infantry Officer, An Old Trooper, and other works. In 1894, feeling that "the West was all played out in its romantic aspects," as he expressed it, he made his home in New Rochelle. It was not until a year later that he turned his hand to sculpture. The most famous of the resultant bronzes is the Bronco Buster. The artist visited Cuba at the time of the Spanish-American war, and later returned to Europe. On one or more occasions he exhibited at Paris.

Finance.

AFTER THE "LOAN-SHIFTING."

Among the particularly interesting comparisons, made possible by the returns, just published, of the whole country's national banks, were the figures of the loan account, at New York and outside of New York. Up to the end of summer the New York bank position was unusually comfortable. The widespread and thorough liquidation, after the break-down of 1907, had brought bank liabilities to a low level. Simultaneously, the releasing of currency from the channels of trade sent that currency into bank reserves, where it found already lodged the $100,000,000 gold, imported during panic times. The result on the New York banks, during 1908, was so striking that, by the middle of the year, surplus reserves had reached $66,098,000—the highest level ever attained by them, save for the similar after-panic period, 1894.

The present year had those easy bank conditions as a legacy. As recently as the end of last July, the New York surplus bank reserves, at $34,000,000, stood at a height attained in midsummer during only two other years of the decade past—one being 1908. This seemed to be promise of continued easy money.

But this high midsummer surplus crumbled away with astonishing rapidity. Recall of interior money from New York, as harvest-time approached, occurred as usual; but no effort was made to reduce the New York loan account built up on the basis of those interior reserves. On the contrary, Stock Exchange speculation for the rise, on a scale of excessive magnitude, increased the demand for credit. By September 11, the New York surplus had declined to $3,166,000. Since reserve money was still leaving the Associated Banks for the West at the rate of five to ten millions weekly, and since speculation was still rioting on the Stock Exchange, a deficit in reserves, below the 25 per cent. requirement, seemed unavoidable.

It did not come. The reason for its non-appearance was not the maintenance of the New York currency holdings; that item fell from $351,800,000 on September 11 to $298,900,000 on December 4. What happened was a reduction between those dates, in loans of the Associated Banks, amounting to no less than $163,000,000. But since this enormously large loan reduction was accompanied by no visible reduction in credits granted on the Stock Exchange or elsewhere, it follows that some one else besides the Associated Banks must have been taking over the loans with which those institutions had found themselves overloaded.

The manner in which a good-sized block of our loans was transferred to London in October—$20,000,000 to $30,000,000, the bank statement seemed to show, in a single week—and the manner in which London threw back later a good part of those loans, makes up one chapter in the episode. The Canadian banks took some; trust companies some; private lenders, in a roundabout way, took others. But the consensus of opinion grew to be that interior institutions were assuming the load, just as in 1906, when clearing-house authorities declared that out-of-town domestic banks were lending $300,000,000 in New York.

Until the past few days, no one could say exactly how large was this shifted burden taken over by interior banks. Five weeks ago, the comptroller of the currency called for reports of all the national banks as of date November 16. That was the height of the loan-shifting movement, and the next previous call of the comptroller had been on September 1, just when the process must have been beginning. Last week's complete and detailed official figures, compiled from those returns, show that the national banks outside New York had in the period increased loans $141,000,000, while New York has reduced its own by $122,000,000.

In the same autumn months of 1906, New York reduced its loans $27,500,000, while banks outside this city expanded loans by $94,600,000. In the similar period of 1905—which very closely resembled the season past—New York reduc-

ed its loans by $95,500,000, against an expansion of $113,600,000 elsewhere. Here was the same process at work as in 1909, but in neither of the two other years was a shifting process indicated on anything like so large a scale as in this season.

What the resultant position in New York was, most of us have for some time been aware. What it was in the banks outside New York, the comptroller's figures partially suggest. According to these figures, Chicago and St. Louis, which with New York constitute the "central reserve cities," were on November 9 below the required 25 per cent. reserve against deposits. How the rest of the interior stands, as compared with the admitted periods of general strain on banking facilities at this date in 1906 and 1905, may be judged from the following figures:

	1909. Per cent.	1906. Per cent.	1905. Per cent.
Other reserve cities..	25.56	24.32	24.77
Southern States	17.87	18.16	18.58
Middle West	16.82	16.60	17.22
Farther West	17.26	16.78	17.56

Wilder's History of the Human Body

By H. H. WILDER, Professor in Smith College. xii+573 pp. 8vo. $3.00.

This advanced text-book in comparative anatomy presents the results of modern anatomical and embryological research relative to the human structure, and furnishes students of technical human anatomy with a basis upon which to rest their knowledge of details. It is fully illustrated, including many original drawings by the author.

BASHFORD DEAN, *Columbia University*:—I have examined it with keen interest and commend its arrangement and originality. It is a very useful book.

Moore's Physiology of Man and Other Animals

By ANNE MOORE. vii+212 pp. 12mo. 80 cents.

An elementary treatment of pure physiology as distinguished from anatomy. It emphasizes strongly the comparative idea and impresses upon the pupil the fact that physiological processes in man, in the lower animals, and in plants are governed by the same laws.

HENRY HOLT AND COMPANY, NEW YORK CHICAGO

Second Edition Before Publication.
Indisputably the Book of the Year

Retrospections of an Active Life

By JOHN BIGELOW

Three vols. Imperial 8vo. 48 illustrations $12 net; carriage extra

A memoir of the classic type: copious in letters, documents, opinions, anecdotes. A record of great events, great scenes, famous men and women. Time—1817-1867. Historic characters—Lincoln, Gladstone, Queen Victoria, Seward, Thackeray, Lord Lytton, Dumas, Guizot, Maximilian, Stanton, Lord Palmerston—appear in the ample pages.

"He tells a story that is of exceptional interest, even in these days of a surfeit of personal reminiscence."—*Boston Transcript.*

"Mr. Bigelow's work is remarkable throughout for its clarity, orderliness, and definiteness of treatment."—*Review of Reviews.*

THE BAKER & TAYLOR CO.
33-37 East 17th Street, New York

The Conclusion of a Great Work.

A Literary History of The English People

From the Earliest Times to the Civil War. By J. J. JUSSERAND. Three vols. 8vo., with Frontispieces. Each $3.50 net.

Vol. III. (completing the Work) From the Renaissance to the Civil War: Part II. Now Ready. Previously Issued: Vol. I. From the Origins to the Renaissance. Vol II. From the Renaissance to the Civil War. Part I.

"Mr. Jusserand's qualifications for the task which he has undertaken are of a high order. There are few foreigners, and certainly very few Frenchmen, who have so intimate a knowledge of English life. He has already gained great distinction as an original investigator in more than one period of English literary history, and although his point of view in the present work is unmistakably that of a Frenchman, he shows a degree of sympathetic insight which is seldom met with in foreign critics of our literature."—*London Athenaeum.*

G. P. PUTNAM'S SONS, NEW YORK & LONDON
